disk A or B. Approximately 30 minutes after the
installation, the virus generates a file, 50 bytes
long, with an unusual name consisting of special
characters: "@^#%& .(-: ". The file is read-
only and contains the following text:

";-) As MAD Zimmermann will be watching you)-;"

The characters at the ends of the line can be
regarded as a happy face on the left and a sad
face on the right side; probably kind of ASCII-
comic with political background: F.Zimmermann is
a well-known conservative politician in FRG, and
a strong opponent of privacy and data protection;
as former minister of Interior, he was responsible
for several intelligence agencies, though not for
the German military intelligence service "MAD".
Similarities.....: ---
---------- Agents ----------
Countermeasures.....: The virus can be detected in and removed from
infected files by 'Zimmermann Virusfilter
Program', written by Thomas Piehl (see below).
Countermeasures successful: 4DETECT detects the Zimmermann-Virus, if you
set 'System Supervision' to 'On'; 4DETECT then
tells when the trap #1 vector is changed.
4DETECT also supervises suspicious write accesses
to boot sectors and program files.
Standard means.....: Write-protect the disk.

======== Computer Virus Catalog 1.2: "ACA"-VIRUS (5-June-1990) ========
Entry............... "ACA" Virus
Alias............... ---
Strain.............. ---
Detected when....... October 1988
where...... Utrecht (Netherlands)
Classification...... System (Bootsector) Virus, Reset-resident
Length of virus..... 512 Bytes
-----------------------Preconditions---------------------------------
Operating System(s). Atari TOS
Version\Release..... All versions
Computer models..... All Atari ST,STE
```

```
------------------------Attributes-----------------------------------
Easy identification. If the bootsector is infected, the string "ACA"
can be found at bootsector position $04 and $4E.
In memory, the same string can be found at $630.
Type of infection...: Self-Identification: The Virus tests boot sector-
position 4 for String "AC"; if string does not
match, virus infects boot sector.
Reset-resident at address $600 via magic long-
word ($12123456) and checksum ($1234).
Infection Trigger...: Reset
Storage media affected: The virus infects drive A,B!
Interrupts hooked...: No Interrupts used.
No system vectors changed
Damage..............: Permanent Damage: Only after reset overwriting
boot sectors.
Transient Damage: Clearing first track
Damage Trigger......: Damage occurs after 10 infections.
Particularities.....: ---
Similarities........: ---
--------------------- Agents ----------------------------------------
Countermeasures.....: Program that search for reset-resident programs,
especialy lower system area ($800).
Programs that calculate the checksum and change
it, if it is $1234; the sector is then regarded
as not executable. Reboot the system with a
'clean' disk! ( Category 1.3 ).
Countermeasures successful:---
Standard means......: Write-protect the disk.
Write a well-known program to the boot sector;
'manually' change the checksum to a value other
than $1234.
--------------------- Acknowledgement --------------------------------
Location............: Virus Test Center, University Hamburg, FRG
Classification by...: Thomas Piehl
Documentation by....: Thomas Piehl
Information Source..: from George R. Woodside
Date................: 5-June-1990
==================== End of "ACA"-VIRUS ==============================

======== Computer Virus Catalog 1.2 "ANTI-2" Virus (5-June-1990) ======
Entry............... "Anti-2" Antivirus Virus
Alias............... ---
Strain.............. ---
Detected when....... October 1988
where...... Helmond (Netherlands)
Clssification....... Bootsector Virus
Length of virus..... 512 Bytes
------------------------Preconditions--------------------------------
Operating System(s). Atari TOS
Version\Release..... All versions
```

```
Computer models..... All Atari ST
------------------------Attributes-----------------------------------
Easy identification. The string : "This Anti-Virus beeps" can be found
in the bootsector at Byte Nr. $1E, or in memory
at Dskbufp+$600+$1E.
Type of infection... Any non-executable Bootsector will be overwritten
Infection Trigger... Execution of BIOS disk function Getbpb.
Media affected...... Any kind of media.
Interrupts hooked... hdv_bpb vector (used by BIOS disk functions).
Damage.............. ---
Damage trigger...... ---
Particularities..... The Program can be used as an anti-virus. If the
bootsector is executable, the program produces
a sound and the screen flashes.
Similarities........ ---
-------------------------------------------------------------------------
Countermeasures..... Make sure that the virus is not in memory. Modify
the last byte in bootsector to another value.
Standart means...... Clear all bytes in bootsector beginning at
offset 30 decimal.
-----------------------Acknowledgements--------------------------------
Location............ Virus Test Center, University of Hamburg, FRG
Classification by... Andre' Schaper
Documentation by.... Andre' Schaper
Information Source.. George R. Woodside
Date................ 5-June-1990
==================== End of "Anti-2" Virus ============================

======== Computer Virus Catalog 1.2: "Blot" Virus (5-June-1990) =======
Entry............... "Blot" Virus
Alias............... ---
Strain.............. ---
Detected when....... May 1988
where...... Amherst (USA)
Classification...... Boot sector virus
Length of virus..... 681 Bytes
------------------------Preconditions----------------------------------
Operating System(s). Atari TOS
Version\Release..... ROM TOS from 02.06.1986; in other versions,
no action is performed.
Computer models..... All Atari ST
------------------------Attributes-----------------------------------
Easy identification. In memory at Phystop +34 and in the boot sector at
the same offset, the following bytes can be found:
$0206198600FC0018
Type of infection... Boot sector of drive A.
Infection trigger... Usage of drive A.
Media affected...... Drive A.
Interrupts hooked... 200 Hz interrupt , Bios Parameter Vector.
Critical Error Handler at infection time.
```

```
Phystop is decremented by 1 KByte.
Damage.............. The screen is blacked out from bottom to middle
and from top to middle at same time.
Damage trigger..... Virus is about 3 hours in Ram. (Depends on value
of 200 Hz timer).
Particularities..... Only boot sectors that aren't executable are in-
fected.
Similarities........ The general concept of the virus is similar to the
'Screen'-Virus
-------------------------------------------------------------------
Countermeasures..... Make sure that the virus is not in memory.
Search bootsector for the string mentioned above.
Modify last byte in boot sector to another value.
Standard means...... Clear all bytes in bootsector (sector 0) beginning
at offset 30 (dec) and clear all bytes in sector 5.
-------------------- Acknowledgements---------------------------------
Location............ Virus Test Center, University of Hamburg FRG
Classifcation by.... Ralf Stegen
Documentation by.... Ralf Stegen
Information Source.. George R. Woodside
Date................ 5-June-1990
==================== End of "Blot" Virus ============================

====== Computer Virus Catalog 1.2: "GOBLINS" Virus (5-June-1990) ======
Entry............... "GOBLINS" Virus
Alias............... -
Strain.............. -
Detected when....... May 1989
where...... Utrecht (Netherlands)
Clssification....... System (Boot sector) Virus
Length of virus..... 512 Bytes
-----------------------Preconditions---------------------------------
Operating System(s). Atari TOS
Version\Release..... TOS 1.2
Computer models..... All Atari ST
------------------------Attributes-------------------------------------
Easy identification. The string "The Little Green Goblins" can be
found in the boot sector $1B6, or in memory
at pystop -$8200 +$1B6.
Type of infection... The actual boot sector will be overwritten.
Infection Trigger... Execution of BIOS disk function Getbpb.
Media affected...... Floppy disk drive with device 0 (A:) or 1 (B:).
Interrupts hooked... hdv_bpb vector (used by BIOS disk Getbpb).
Damage.............. - First text line or menu line is modified until
next execution of the damage routine.
- A message is printed on the screen.
Damage trigger...... Copy Counter in Memory:
(Counter mod 16) = 0 : Modify screen
(Counter mod 128)= 0 : Print message.
Particularities..... The virus is reset-resident!
```

```
Similarities........ ---
------------------------------------------------------------------------
Countermeasures..... Make sure that the virus is not in memory.
Modify the last byte in boot sector to other value.
Standard means...... Clear all bytes in boot sector beginning at
offset 30 (decimal).
----------------------Acknowledgements---------------------------------
Location............ Virus Test Center, University of Hamburg, FRG
Classification by... Andre' Schaper
Documentation by.... Andre' Schaper
Information Source.. George R. Woodside
Date................ 5-June-1990
==================== End of "GOBLINS" Virus ==========================

======== Computer Virus Catalog 1.2: "KOBOLD 2" (5-June-1990) =========
Entry............... "Kobold 2" Virus
Alias............... ---
Strain.............. ---
Detected when....... ---
where...... Utrecht (Netherlands)
Classification...... System (Boot sector) Virus, Reset-resident
Length of virus..... 512 Bytes
-----------------------Preconditions-----------------------------------
Operating System(s). Atari TOS
Version\Release..... TOS 1.0 and 1.2
Computer models..... Atari ST
------------------------Attributes-------------------------------------
Easy identification. If the boot sector is infected, the string
'KOBOLD#2 AKTIV!' can be found in the middle of the
boot sector; in memory, this string can be found
at beginning of transient programm area (TPA).
Type of infection... Any boot sector that can be written to.
Infection trigger... Execution of XBIOS disk functions.
Execution of boot code.
Media affected...... Drive which is set as boot device or accessed by
XBIOS.
Interrupts hooked... Vertical Blank Interrupt at infection time;
hdv_bpb (harddisk bios parameter block);
resetvector.
Damage.............: Permanent Damage: Overwriting Bootsectors.
Transient Damage: Speeding up mouse motion
in directions UP and LEFT.
Damage trigger.....: Internal counter
Particularities..... With TOS 1.2, mouse motion is not changed.
Similarities........ ---
Countermeasures..... Make sure that the virus is not in memory.
Search boot sector for string mentioned above.
Modify last byte in boot sector to other value.
Standard means...... Clear all bytes in boot sector beginning at
offset 30 decimal.
```

========== End of "KOBOLD #2" VIRUS ==========

======== Computer Virus Catalog 1.2: "LAB"-VIRUS (5-June-1990) ========
Entry..... "LAB" Virus
Alias..... ---
Strain..... ---
Detected when..... 1989
where..... Utrecht (Netherlands)
Classification..... System (Boot sector) Virus, Reset-resident
Length of virus..... 512 Bytes
----------Preconditions----------
Operating System(s). Atari TOS
Version\Release..... Version TOS 1.0 AND TOS 1.2
Computer models..... All Atari ST with TOS 1.0 or blitter TOS
----------Attributes----------
Easy identification. If the bootsector is infected, the string "Virus"
can be found at bootsector position $02. In memory,
the same string can be found behind screen memory.
Type of infection...: Self-Identification: No identification.
The virus installs itself RAM-resident behind
screen memory.
Infection Trigger...: Each time a new diskette is inserted, the virus
will infect the new diskette.
Storage media affected: The virus infects drive A,B
Interrupts hooked...: No Interrupts used.
hdv_bpb changed to infect Bootsector of new Disk.
Damage.....: Permanent Damage: Overwriting Bootsectors.
Transient Damage: Painting screen black.
Damage Trigger.....: Damage action after 10 infections.
Particularities.....: If virus is installed and harddisk is connected,
sometimes harddisk access maybe impossible.
Similarities.....: ---
---------- Agents ----------
Countermeasures.....: Programs that calculate the checksum and change
it, if it is $1234; the sector is then regarded
as not executable. Reboot the system with a
'clean' disk! (Category 1.3).
Countermeasures successful:---
Standard means.....: Write-protect the disk.
Write a well-known program to the boot sector;
'manually' change the checksum to a value other
than $1234.

=========Computer Virus Catalog 1.2: "MAD" Virus (5-June-1990) ========
Entry............... "MAD" Virus
Alias............... -
Strain.............. -
Detected when....... October 1988
where...... Helmond (Netherlands)
Clssification....... Boot sector virus
Length of virus..... 512 Bytes
-----------------------Preconditions---------------------------------
Operating System(s). Atari TOS
Version\Release..... All versions
Computer models..... All Atari ST
------------------------Attributes-------------------------------------
Easy identification. The words : $7FE,$80F,$8100,$400 can be found
on boot sector at Byte $1D6, and in memory
at phystop-$300+$1D6.
Type of infection... Any Boot sector that can be written to.
Infection Trigger... Execution of BIOS disk functions.
Media affected...... Floppy disk drive with device 0 (A:) or 1 (B:).
Interrupts hooked... hdv_rw vector (used by BIOS disk functions).
Damage.............. Only screen damage:
-Change screen address
-Rotate screen bytes
-Invert screen
-Split screen into upper and lower half and
change them
-Make a sound (beep)
Damage trigger...... Copy counter = 6 (6 bootsectors infected).
Particularities..... ---
Similarities........ "Anti-2" Virus
-----------------------------------------------------------------------
Countermeasures..... Make sure that the virus is not in memory.
Modify the last byte in boot sector to other value.
Standard means...... Clear all bytes in boot sector beginning at
offset 30 decimal.
----------------------Acknowledgements-------------------------------

=================== End of "MAD" Virus ==============================

== Computer Virus Catalog 1.2: "Maulwurf" (Mole) Virus (5-June-1990) ==
Entry...............: "Maulwurf" (=Mole) Virus
```

```
Alias(es)...........: Maulwurf I SSG (=Subversive Software Group) Virus
Virus Strain........: ---
Virus detected when.: 14 May 1989
where.: Utrecht (Netherlands)
Classification......: System (BootSector) Virus, Reset-resident,
Overwriting
Length of Virus.....: 512 Byte
-------------------- Preconditions ----------------------------------
Operating System(s).: ATARI-TOS
Version/Release.....: Only TOS Version 1.0
Computer model(s)...: Atari ST with TOS 1.0
-------------------- Attributes -------------------------------------
Easy Identification.: ---
Type of infection...: Self-Identification: The virus tests, if its
whole code from boot sector is behind screen
memory; if not, virus installs itself reset-
resident and patches system initialisation
after reset.
Infection Trigger...: Each time a new diskette is inserted, the virus
will infect the new diskette.
Storage media affected: The virus infects only drive A,B
Interrupts hooked...: -VBL Interrupt: 1.to check if hdv_bpb is changed
back to old address;
2.to test if time is right to
deadlock the system.
-Resetvector to patch system initialisation.
-hdv_bpb changed to infect boot sector of new disk.
Damage..............: Permanent Damage: Overwriting boot sectors.
Transient Damage: Whole screen filled with message
'Maulwurf I - SSG (Subversive Software Group)'
and deadlock system also after reset if time is
over.
Damage Trigger......: after 7 minutes + number of infections * 5 minutes
The counter is located at start of virus+$1FC.
Particularities.....: ---
Similarities........: ---
-------------------- Agents -----------------------------------------
Countermeasures.....: Programs that checks hdv_bpb-, Reset-vector if
adress points after screen memory (Category 1.2).
Programs that calculate the checksum and change
it, if it is $1234; the sector is then regarded
as not executable. Reboot the system with a
'clean' disk! (Category 1.3).
Countermeasures successful:---
Standard means......: Write-protect the disk.
Write a well-known program to the boot sector;
'manually' change the checksum to a value other
than $1234.

Date................: 5-June-1990
===================== End of "Maulwurf I" Virus ======================

======== Computer Virus Catalog 1.2: "OLI" VIRUS (5-June-1990) ========
Entry.............. "OLI" Virus
Alias.............. ---
Strain............. ---
Detected when....... May 1989
where...... Utrecht (Netherlands)
Classification...... Boot sector virus
Length of virus..... 512 Bytes
-----------------------Preconditions---------------------------------
Operating System(s). Atari TOS
Version\Release..... All versions
Computer models..... All Atari ST
------------------------Attributes-------------------------------------
Easy identification. If the boot sector is infected, the string
"OLI-VIRUS installed ." can be found at end of
the boot sector; in memory, the same string can
be found at $7B6.
Type of infection... Any boot sector that can be written to.
Infection trigger... Execution of XBIOS disk functions.
Execution of boot code.
Media affected...... Drive which is set as boot device or accessed by
XBIOS.
Interrupts hooked... TRAP #14, TRAP #12 set to old value of TRAP #14.
Vertical Blank Interrupt at infection time.
Damage.............. Transient damage:1.Message on screen:
"OLI-VIRUS installed. "
2. The computer slows down until stop;
all CPU time is used by Vertical
Blank Interrupt; time until stop
depends on the time the computer has
been used (=number of VBI's).
Damage trigger..... Internal counter =0 (3rd byte in boot code
+$414 in RAM).
Particularities..... The virus simulates an uninfected boot sector by
modifying the read buffer. The disk information
is left unchanged, and the virus code is over-
written with $4E ='N'.
The virus is recognised by Sagrotan because of
direct programming of the FDC.
Similarities........ ---
------------------------------------------------------------------------
Countermeasures..... Make sure that the virus is not in memory.
Search bootsector for the string mentioned
above. Modify the last byte in boot sector
```

to another value.
Standard means..... Clear all bytes in boot sector beginning at
offset 30 decimal.
----------Acknowledgements----------
Location..... Virus Test Center, University of Hamburg, FRG

Date..... 5-June-1990
========== End of "OLI" Virus ==========

==== Computer Virus Catalog 1.2: "PIRATE TRAP" VIRUS (5-June-1990) ====
Entry..... "PIRATE TRAP" Virus
Alias..... ---
Strain..... ---
Detected when..... May 1989
where.....
Classification..... System (Boot sector) Virus, Reset-resident
Length of virus..... 512 Bytes
----------Preconditions----------
Operating System(s). Atari TOS
Version\Release..... all TOS versions
Computer models..... All Atari ST
----------Attributes----------
Easy identification. In memory behind screen memory and in the boot
sector, the following string can be found.:
"*** The Pirate Trap ***
* Youre being watched *
*** [C] P.M.S. 1987 ***"
Type of infection... Boot sector of drive A.
Infection trigger... Execution of XBIOS floprd on bootsector of drive A.
Execution of boot code.
Media affected..... Drive A.
Interrupts hooked... TRAP #14 XBIOS, reset vector.
Damage..... The the message mentioned above appears on screen,
and the computer waits for a keystroke; then, the
computer continues execution.
Damage trigger..... Internal counter = 0.
Particularities..... A lower counter on disk than the one in memory
is not changed.
Similarities..... ---

Countermeasures..... Make sure that the virus is not in memory.
Search boot sector for the string mentioned
above. Modify the last byte in boot sector
to another value.
Standard means..... Clear all bytes in boot sector beginning at
offset 30 decimal.
----------Acknowledgements----------
Location..... Virus Test Center, University of Hamburg, FRG

Date................ 5-June-1990
==================== End of "PIRATE TRAP" Virus ======================

======= Computer Virus Catalog 1.2: "SCREEN" VIRUS (5-June-1990) ======
Entry............... "SCREEN" Virus
Alias............... ---
Strain.............. ---
Detected when....... May 1989
where...... Utrecht (Netherlands)
Classification...... Boot sector virus
Length of virus..... 456 Bytes (512)
-----------------------Preconditions---------------------------------
Operating System(s). Atari TOS
Version\Release..... ROM TOS from 02.06.1986; in other versions,
virus will not be installed.
Computer models..... All Atari ST
------------------------Attributes-------------------------------------
Easy identification. In memory at Phystop +34 and in the boot sector at
the same offset, the following bytes can be found:
$0206198600FC0018
Type of infection... Boot sector of drive A.
Infection trigger... Usage of drive A.
Media affected...... Drive A.
Interrupts hooked... 200 Hz interrupt($114) for time-control and damage.
hdv_bpb to infect bootsector.
Critical Error Handler at infection time.
Phystop is decremented by 512.
Damage.............. The screen is blacked out from bottom to middle
and from top to middle at same time; no more action
can be performed as screen is permanently black.
Damage trigger..... Between 3 and 30 minutes (depends on value of
200 Hz timer; action when timer >=360000).
Particularities..... Only boot sectors that are not executable are in-
fected. The word at offset 30 from beginning of
bootsector varies from infection to infection. If
a reset is performed, the virus becomes inactive
but is still in RAM. If the virus is on a disk
used after reset and the damage was active before
reset, it reappears after 3 minutes.
Similarities........ Same screen damage as BLOT VIRUS (same routine).
-----------------------------------------------------------------------
Countermeasures..... Make sure that the virus is not in memory.
Search boot sector for the string mentioned
above. Modify the last byte in boot sector
to another value.
Standard means...... Clear all bytes in boot sector beginning at
offset 30 decimal.
```

```
----------------------Acknowledgements--------------------------------
Location..... Virus Test Center, University of Hamburg, FRG

====================== End of "SCREEN" Virus =========================

====== Computer Virus Catalog 1.2: "5th Generation" (5-June-1990) =====
Entry...............: "5th. Generation"
Alias(es)...........: ---
Virus Strain........: ---
Virus detected when.: May 1989
where.: Utrecht (Netherlands)
Classification......: Bootsector-Virus
Length of Virus.....: 326 Bytes
-------------------- Preconditions ----------------------------------
Operating System(s).: Atari-TOS
Version/Release.....: 1.0, 1.2 (1.4 not yet tested)
Computer model(s)...: All types of the Atari ST Series
-------------------- Attributes -------------------------------------
Identification......: First word in the boot sector = $601C.
Type of infection...: Infects the boot sector of the disk A, if it is
regarded to be non-infected.
Infection Trigger...: check if bootsector is executable
Media affected......: Infection of disc in drive A.
Interrupts hooked...: BIOS-Trap used and changed by this virus.
Damage..............: Infects the boot sector of the disk, if it is
regarded to be un-infected. Clear Track 0
with the FAT and the directory.
Damage Trigger......: If counter (at start of virus + 324) = 0. Initial
value depends on number of infections.
Particularities.....: ---
Similarities........: ---
-------------------- Agents -----------------------------------------
Countermeasures.....: Programs that calculate the bootsector's checksum
and modify it, if it is $1234; then, the sector
is regarded as not executable. The suspected
more dangerous second part of the virus might
not be recognized because it does not need
to have the correct checksum.
Countermeasures successful: ---
Standard means......: Write protect the disk / Write an easily
identifiable bootsector / 'Manually' change the
checksum to a value other than $1234 .

<unquote>

Atari comes up short in the virus dept (with only a few dozen titles to choose from). PC uers have their choice of over 8,500 offerings :-]

Keith M.

3659. SIMMS upgrade for ST

Newsgroup: comp.sys.atari.st
Date: 1996-05-29 00:00:00 UTC
From: Simon Hazelgrove <sph94@ecs.soton.ac.uk>
Message-ID: <31AC8359.26E3DBAD@ecs.soton.ac.uk>
Source record: 144550

Well, I've just seen the prices for SIMMS and I cant believe it! 35
quid
(uk) for 4 megs! AND they're apparently still dropping!

Anyway, I reckon soon might be a good time to upgrade my old STfm to the
full 4 megs. I already have the simms 1/2 meg upgrade board, but I've
lost the instruction booklet. It was the most popular upgrade board
around, where you simply plug a chip over the mmu and something else,
and
hey presto, 1 meg!

How would I go about fitting 4 megs? I seem to remember something about
2 x 2 megs SIMMS, but I cant seem to find 2 meg SIMMS. Also, how many
pins, and what speed should they be? (Sorry, I just cant remember!)

I also remember something about cutting off the old atari memory bank.
I
dont think I needed to do this with a 1/2 meg upgrade, but what about
more? How do I go about this?

Cheers for any help,
Simon.

3660. Free Multitasking?

Newsgroup: comp.sys.atari.st
Date: 1996-05-29 00:00:00 UTC
From: Simon Hazelgrove <sph94@ecs.soton.ac.uk>
Message-ID: <31AC84A0.3F334B6A@ecs.soton.ac.uk>
Source record: 144551

Are there any freeware/shareware multi tasking OS's around? I have an
old STfm (TOS 1.0!) and I just cant afford to fork out for any
commercial
product.

I currently have a terradesk setup, can I use this with a multitasking
OS? If not, are there any freeware/shareware preferebly (or very cheap)
desktop replacements around?

Thanks for any help,
Simon.

From: lizneely@netcom.com
Message-ID: <lizneelyDs88xz.A1z@netcom.com>
Source record: 144256

I have an Atari 1040 ST for sale. It is located in Santa Cruz, CA and I'd like to sell it to someone in the area so I don't have to deal with shipping. It has a monchrome monitor. I also have a broken color monitor I'll give with it (probably a short in the power supply.) It also has a harddrive that works but occasionally needs a "kick start." I've never lost any data on it though. I'm asking $150 for the complete system.

My email address is lizneely@netcom.com.

3666. Books about raytracing ???

Newsgroup: comp.sys.atari.st
Date: 1996-05-30 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <833556862_OASIS_@phil4.demon.co.uk>
Source record: 144257

Does anyone know of any good books about ray-tracing ???

I'm looking at starting from the basics, although I'm not stupid, and
know a fair bit about computing, and have used a couple of raytracers
in the past.

The reson I want to start at the beginning is to make sure I've got
all the theory spot on before I start anything else, otherwise weeks
of writinga program could turn out a waste :)

Does anyone have any suggesions, or recommendations ???

Thanks in advance !!

3667. Re: My Dead MegaFile 30 :((USA)

Newsgroup: comp.sys.atari.st
Date: 1996-05-30 00:00:00 UTC
From: ccook@icis.on.ca
Message-ID: <833513210_OASIS_@icis.on.ca>
Source record: 144258

It's likely your drive that died. The Seagates in the Megafile 30 had
notoriously short lives. Mine only lasted a couple of years before it
developed stiction problems. Unfortunately, there is no way to get an
RLL drive now.

What are you doing with a link in the chain? The Megafile 30 is an
ASCI device with the host adapter built in. First thing I would try is
simply remove the link and plug the drive directly into the ST.

Specialist Magazines which published Atari World and it's parent company
COMPO have run into financial problems (They are now in receivership I
believe). It is therefore unlikely that Atari World will ever appear
again.

I and a great many people believe that this is a terminal loss to the UK
atari World.

From: johnyboy@sydney.DIALix.oz.au
Message-ID: <4ok09t$ll7$1@sydney.DIALix.oz.au>
Source record: 144314

Several years ago I bought Le Redacteur (Version 3.15). I have not heard about any upgrades, additions etc since then.

I have three questions:

1. IS there an English thesaurus available and where from.

2. Is there a specific BJ200ex printer driver available (I am having problems configurating at the moment).

3. Has the programme been upgraded from ver3.15?

BTW, it's a great word processor!

Any assistance would be much appreciated.

From: mdekker@fwi.uva.nl
Message-ID: <4ok476$2mu@turing.fwi.uva.nl>
Source record: 144317

So I finally succeeded in making a nullmodemcable to connect my
Atari ST to my 486DX4/100 running linux. I can now login from my
ST on the linux box, making the atari a dumb terminal. I would like
to use the Atari as a workstation. So I would like to runs slip or
ppp over the serial line and run some unix clone on my ST.
My questions:

Is there a MiNT distribution that can help me here (the ST only
has 1Mb RAM, TOS1.4, yes old) ?

Is there a small simple GEM based terminal .acc (i.e running in a window!).

Any graphically oriented multiplayer games that I could run (I already
have a mud running, funny but a bit too boring) ?

s > reduction in cost. If you have a browser read the latest at
s > MacWeek.com/

there already IS one - MagicMac by Application Systems
Heidelberg, an incredible alternate operating system that runs Atari
application software on any Macintosh system with System 7 -
including PowerPC systems. I installed the demo on a PowerMac 7100
at my brother's work and it runs quite well - and fast. (It also got
a lot of notice from my brother's co-workers, who were quite
amazed).

I suggest you point your web browser at www.toad.net and get the
news on this - you can even download the latest demo :)

3683. HP DAT drives & Jaz drives - ok for ST?

Newsgroup: comp.sys.atari.st
Date: 1996-05-30 00:00:00 UTC
From: Oliver Skelton <skelton@gatwick.geoquest.slb.com>
Message-ID: <31ADAA17.2C67412E@gatwick.geoquest.slb.com>
Source record: 144319

Is anyone using a Jaz drive or HP C1533 4/8gB DAT drive with an ST?

I am looking for confirmation that they will work with ICD's 'The Link'.
Also whether they work with a Falcon (more likely).

One possible problem is the datarate required to keep the DAT streaming.
I think this drive can soak up about 600k/sec and I am not sure if
either Falcon or ST can keep it supplied at that rate whilst also
reading the data from a hard disk. I am not sure if it can stream at a
slower rate, or whether it has to keep stopping and repositioning.

I am thinking of using GEMAR (unless someone has a better idea... I want
tar compatibility).

Regards,
Oliver

Hello,

I have a few items left over after selling my Atari ST. I'd like to clear
out my storage area, so I'm offering them cheap.

Wordflair II - Document Processor (requires scalable GDOS)
Easy Draw - Object Oriented Drawing Package
Atari ST Internals Book
Atari ST BASIC to C Book
Atari ST Disk Drives Inside and Out

Asking $25 for the entire package! This INCLUDES shipping to anywhere in the
United States. Cash or Money Order in US Funds Only. Must be prepaid.

If interested, please contact me via E-mail at: awatson@pacifier.com

Thanks,

Anthony Watson

don <dons@qnet.com> said:-

>So far I have been able to connect ,login and give password.The problem
>that I am having is that it wont get the IP address.When I connect to my
>internet connection it says SL/IP Session from(numbers to numbers).How do
>I get Stik to get th IP address?

I have another problem with STiK.
It connects just fine and I get an IP address. I then try to connect
using Telnet and it says Connected but nothing else happens. The same
thing happens in CAB, it finds the host but then it hangs on
"Recieve 0 bytes". The Read Data diod on my modem flashes sometimes
but nothing is read to CAB.

I have tried turning on/off MiNT, NVDI, fpatch2 and HSmodem patches for
Falcon serial ports. It all leaves the same result.

Anyone any ideas?

- Tomas

> If it does take simms, which type?
>
You wanna upgrade your harddisk and your RAM, that's easily done. The harddisk sits beneath the cover which is offset at the right hand side of the case of your computer. You only have to unscrew a single screw that is accessed from beneath the case, close to the front edge, and you can remove the cover I mentioned above. The harddisk hangs under it, and you'll have to look what else to unscrew to get the harddisk removed. The new one must be an SCSI harddisk in a 3.5" case, like the old one. Make sure the harddisk can be configured to have parity disabled, possibly by a jumper on the harddisk's main board. After this you can install it the way you removed the other one. You probably need to repartition the harddisk. Use the program from the Advanced Harddisk Utilities disk that came with your Mega STE that is called HDX, to repartition the drive, make it bootable by HINSTALL and you're ready to use it.

Concerning RAM : When you removed the cover with the harddisk you can peek through the hole in the case at the main board. At this place you should see the RAM simms. You'll see two simms, sitting in place 1 and 3. Add two more simms (1 MB simms, 8bit (I've been told that 9bit simms work as well), 100ns or faster (I guess you don't get them slower)) at places 2 and 4. Examine the sockets carefully to figure out how they work mechanically. You probably have to remove the simms that are already installed in order to get them in all. Once you've put in the simms you should be able to access 4 MB of RAM.

Mind you : It's you who is responsible if you break something. But it's not too easy to damage anything, even for the unexperienced, neither mechanically nor electrically, if you approach the work *thoughtfully*.

> has 1Mb RAM, TOS1.4, yes old) ?
>

Not as I know, but you're right, MiNT is the way to go. So you've got to install it on your own. Read all the docs and it's not too difficult. You'll need MiNT (get Version 1.12), MiNTnet (version 0.9 is out, it's called net-090.something), and you're ready to connect. Both programs have the docs in their source distribution !!! Get also HSMODA06, it improves the RS232 interface considerably. Now you need some net clients, like telnet, ftp, or whatever you need. Since most of them are text based you will want a MiNT shell as well. Go for a small one, as your memory is limited. Using TOSWIN14.ACC you can run it in a GEM window. Happy networking !

Cheers Peter

The best disk buy I have found is at HI-TECH. Their page is
http://www.internet-cafe.com/hi-tech/
They have a 525MB seagate ST 3600N 3-1/2" 1/3ht. SCSI,
11 ms acc. time, that is really quiet.

Does the following exist?

I read in the latest Keyboard magazine that C-Lab is coming out with a TOS-compatible card you put in your PC which allows you to run Atari software. Like an ST on an ISA card. It has the MIDI ports and the cartridge port.

Anyone know anything about such a unit?

Thanks!

Hej Carl,

The game is not finished yet, but a "second preview" is on the way. I
think we are going to get it playable to NAS, but it won't be released
there, you will have to wait another week for it. The full version
will probably be ready sometime after the summer. It's a lot of work you
know! 8-) Glad you're interested, though.

Yes, I heard about Tommy, he wants 50 SEK for the new version of
FAST-Boot, and he's really worth it, I'm using FAST-Boot every day. 8-)

Typical symptoms of someone trying to use STiK to connect to a CSLIP
provider. Contact your provider and ask for plain, uncompressed SLIP.
Also possible, but less likely : STiK reads the wrong IP address. Some
providers state both the providers and your IP-address. Make sure STiK
fetches the right one.

3707. Populous with music on STE

Newsgroup: comp.sys.atari.st
Date: 1996-05-30 00:00:00 UTC
From: lais@cs.man.ac.uk
Message-ID: <4ok7rt$rsh@m1.cs.man.ac.uk>
Source record: 144343

Hello,
I recently got the game Populous 2, and I thought I'd share a
little tip for fellow STE users.

You'll have noticed that the game comes with an addendum for ST
owners, which details installation procedures, and `the bits we
couldn't be arsed to program for the ST' (reminds me of The Chaos
Engine from The Bitmap Brothers, shame...).

The following limitations apply to the Atari ST version of Populous II
QUIT TO DOS Option - ST users do not have a QUIT TO DOS option.
^^^
(No, really? I wonder why...)

Music - ST users do not hear music while playing the game.

That second point is not strictly true! Besides switching on your
stereo and bunging on your favourite CD or whatever, you can have
your STE playing some nice .MOD music while you conquer lands!

The thing you need is a PD program called The Jukebox. This runs
as a .PRG or .ACC so name it accordingly - in this case you'll need
it to run as an accessory (.ACC). If you don't have a copy or can't
find it let me know and I'll mail it to you.

It's easy; load a module, set it playing and then load Populous 2
(note that you should disable screensavers such as that in MACCEL
because they stay active during the game and blank the screen
permanently until you reboot!)

Obviously this is a compromise in that you can't change modules
while playing the game but it's better than no music at all!
While we're on the subject of limitations, here are some more ;-)

* 8MHz STE owners will struggle. Even at a playback frequency of
12.5kHz (i.e. not very good...) the game will crawl. Sorry, not
my fault :-(

* 16+MHz STE owners (e.g. MEGA STE) can have a comfortable game
with a module playing at 25kHz. Quite nice. It's pretty cool with
the modules from the Jaguar game, Tempest 2000 :-)

* It works more reliably from floppy. The Jukebox is not very
smart in the way it uses system resources; it always takes what

it needs, and if it can't get it, it just stops playing. In contrast, BackTrack, supplied with ProTracker ST, skips CPU cycles if it can't get sufficient resources. The result is the sound `scrapes' a bit, but it carries on playing. Sadly BackTrack causes a crash if you try to run it with Populous. If you want to run the game from hard disk, expect the music to just stop suddenly. It's most likely to happen while the game loads, because a hard disk transfer fills the system bus with a huge burst of data, causing The Jukebox to fail miserably.

* Unless you have an insanely fast machine, *don't* select the `Interpol Stereo' mode in The Jukebox. Use `Stereo,Good S/N' for general use, and `Stereo,No clip' for modules that otherwise produce clipping distortion.

* The Jukebox is pretty old and doesn't support quite a few tracker commands.

* I'm pretty old (20) and still have trouble working out which way to wear my new jumper since my mother cut the label off ;-)

Bravo!!! Well said!
So, I guess this concludes this discussion, eh?
Let's just ignore this Sinclap guy, OK?

This group must be one of the most friendly and pleasant groups to read
(just about everybody asking a question here gets an answer (or more)
without being flamed. Sinclap obviously has nothing better to do than annoy
people- let's not ruin the good atmosphere in this group by getting all
worked up because of his brainless comments.
Just ignore him.

The only thing I can suggest is that you can get certain accessories and GEM programs that are so well written you can actually multitask them. I have a Stalker setup that also uses Steno, a breakout game, and I once used a Tetris acc. So if I'm downloading, I can either type a letter on STeno or play Breakout. All without Geneva! of course there are PD versions like Connect and SpirtEd. Hopefully, I would like to take the source to Window Term, an old accessory I found, and use it as a full-screen VT100 emulator for IRC. That would be neat! :)

I am wondering how many people if any would attend a ATARI SHOW in the Southern California area.I for one would like to see a annual So.Ca. ATARI Show.

I know that in the past there has been a show in Glendale,Ca put on by HACK.I never attended one of these shows because at the time I was computerless.

So please send me some email on what you think.Thanks for your time.

Send to:

>time only) and see what you think.

I have tried disconnecting the fan, but while it contributes some
noise, the major part of it comes from the drive itself.

>You can cut the speed (and noise) of a 12v fan considerably by
>inserting a 47 ohm 1 watt resistor in one of the fan leads.

Now this is a good suggestion. Thanks

There is a program that does (or claims) to do exactly this. It's called WTERM. I forget who wrote it but I have a copy (and source code) in fact, I got it (PD ftp site) for the source code and have never tried it as a terminal.

> Any graphically oriented multiplayer games that I could run (I already

Source record: 144207

JP>It's got two meg and I want to upgrade it. Is four the highest it can
JP>go?

Yes (and no). When you want more than 4 meg you need special hardware (ST-Ram up to 12 megs via M. Wevelsieps expansion card, TT-Ram via Multiboard or PAK).
4 megabytes are more than simple, just install another two simms.

JP>If it does take simms, which type?

Any type. Doesn't matter if they are 120ns or faster or 3, 8 or 9 chip simms.

Well, the company still exists currently, but is undergoing a merger with a company that makes hard drives for PC's.. The ST, Megas, TT's & Falcon's have all been stopped in Atari production, a overseas company is still producing limited numbers of Falcon (68030) machines under license from Atari. But, I don't think Atari has had any production lines for computers since about 1993 when they went into the Atari 64 bit Jaguar videogame system.. Now it appears they are about to close up shop, ending many years of enjoyable and productive/entertaining items for us Atari Users..

p> for help.

Most providers only seem to recognise the PC or Mac. I'm fully
expecting the usual, "Atari! wassat?" when I phone the helpline.
An Internet group has just started on NeST so I'll drop in there and
see if I can pick up a few tips.

p> My suggestion is that as far as providers go, you may be better off
p> paying the little extra, because it is likely that it will work.

Yep, quality costs. Unfortunately on my budget I've no choice but to
look for the bargains.

p> ATb. and good luck.

Thanks :)

Last I heard (about a month ago) was that it was well and truly all over,
bar the shouting, and that everything was spoken for.

WTB: Atari Falcon, 50hz PAL, 220/240VAC PSU.

s> for Internet access, plus hourly online fees.

There's also a UK Online, though I'm not sure what the relationship is
between all 3. According to Europe Online's ad. the fee is UKP 3.95 for 3
hours per month, then 1.85 per hour thereafter, no other charges are
mentioned, but then adverts aren't exactly the most honest medium are they.
All the same, I think I'll give them a call and see what they say.

TCache is much more effective than the internal (GEMDOS) cache. Set the
GEMDOS cache to a minimum (2 sectors each) and use TCache. This way you
get a maximum of performance.

I had no problems compiling STonX 0.6.b on Solaris 2.5 using GCC 2.7.2. So I
suggest you install the current version of GCC and try again.

Hello,

How did you install GCC on Solaris 2.5? I have tried this
operation yesterday and I stoped because "make" is an unknown
command on Solaris 2.

Did you use a SunOS 4.x compiled program ?

Thanks in advance for any kind of answer.

Anyone found a way to get mg-ftp to run under Geneva?

Version 1.3 can't find its RSC file...
Version 1.1 and 1.2 will load...connect...but the busy cursor
stays up...can't get control back to mg-ftp. I've noticed
that turning the modem off frees the cursor back up however, and
mg-ftp gets control again...to bad there's not a connection anymore :(...

Whilst we are on the topic ...
Is there a task switcher available for the STE (4 megs)??
I want to switch between Gulam and a Gem editor.
Also has anyone converted Gulam or Emacs to a Gem window??
I know there are progs about that do this.

I see Magic 4 is ï¿½69.95 and windows 95 is ï¿½49.95 - sorry
but it is just too expensive for me. Excellent programming and
I would love to have it on my system but way too expensive...
(Magic that is!!)

Thanks

Davy

I have an Atart 1040STFM and SM124 monitor (hi-res) monitor for sale. The
1040STFM does have built-in MIDI In/Out, 1 meg of RAM, and comes with
software. The software is Cubase 2.0 and Master Tracks Pro. Also, I have a Korg
EX/DW8000 visual editor/librarian that I will include. This is a great
sequencer, still supported fully. Groups such as Skinny Puppy
and Nitzer Ebb have been known to use it, as well as many others. I am
looking for $280 USD OBO + shipping for the entire package (will not
seperate).

> Thom/\/\as B-)
Any pointers on how to get the demo version to work? Is it only for Windows95 or
will it work under Windows 3.1? I uncompressed it into a directory and tried to run
the EXE file (magic_de.exe) from windows and it thinks it is a DOS program.
Running it from DOS it says you can't run it from DOS. Am I missing something?

As far as emulating a 68K based machine like the Atari's someone might want to talk to the guys that are writing Executor, an Apple MAC emulator. It is pretty impressive and quite fast. From what I understand the underlying 68K CPU emulator is a separate program and actually emulates a 680lc40. Might be real nice to connect that CPU emulator with enough support software to actually run a copy of TOS read from ROM.

3760. SCSI Upgrade for Mega STE

Newsgroup: comp.sys.atari.st
Date: 1996-05-31 00:00:00 UTC
From: dano@falcon.ic.net
Message-ID: <4onnaf$qp0@condor.ic.net>
Source record: 144289

Hello,

I recently purchased a Mega STE with a 170mb Quantum SCSI drive in it. I've run into a situation where I'd like to add additional SCSI devices, but I don't really have a good idea of how to do that.

First, the SCSI adapter that is included with the STE is not impressive. I don't really have any software for it that supports the drive I have, and I don't know where the software came from that makes the drive work now. The ICD utilities that I have won't allow me to format or partition the drive, because it claims that a ICD host adapter can't be found.

Anyway, since I'm going to be adding external SCSI devices, I started looking at the ICD Link II -- it attaches to the ASCI port and provides a Centronics 50 -- and it looks good. However, this means I'm still stuck with the Atari host adapter for the internal drive. Will the software that comes with the link II allow me to repartition the internal drive, even with the Atari host adapter?

So, to replace the internal host adapter, I looked at a ICD AdSCSI card. This beast apparently goes OUTSIDE the case. If this is the case, do I have no internal drive? Also, it has a clock, but I don't see how this would be useful with my STE, since it has one built in.

Anyway, I'm trying to accomplish the best of both worlds here. I want external SCSi devices that I can disconnect when I take the computer somewhere, and I want the internal SCSI drive for the same reason. The cached AdSCSI sounds great, especially if I put a larger (500mb) HD internal, but is this practical? Can I only have an external drive with this? Perhaps I should keep the Atari host adapter and just try to find some utilities for it that support more drives, and then get a Link for other SCSI devices.

Ideally, I'd like to get a replacement internal host adapter and dump the Atari one -- and also have an outside Centronics or HD SCSI-2 port. Is there such a product?

Thanks for any advice,

-Dan

Did your Internet Service Provider give the IP address of their NAMESERVER? The line in your default.cfg file should look something like this. NAMESERVER = 192.231.221.9 Only that one is the one here at telerama!

3762. ZIP Drive under Spectre GCR

Newsgroup: comp.sys.atari.st
Date: 1996-05-31 00:00:00 UTC
From: <>
Message-ID: <4onspl$aff@nw003.infi.net>
Source record: 144291

I have been experimenting with my ZIP drive on a MegaST2 and am quite happy overall. I do seem to have to have a disk in it on boot up or it doesn't get recognized as a valid drive using ICD utilities and a LinkII. Sometimes the RELOG program will find it after the fact so that isn't really a problem.

The real question is has anyone else tried using it under Spectre GCR 3.0? It seems to work great as long as a MAC format disk is in it when Spectre first starts. Otherwise it complains that the saved configuration is different and to check the drives. The only real problem is that there is no way I can find to swap disks while in Mac emulation. I can use the eject optin to remove it but there needs to be a "mount" command to make it reread the new disk and I can't find anything like that.

Anyone have any pointers on using removable media under Spectre GCR 3.0? Or under the MAC os (System 6.0.5) in general. Is there a PD program that can make the OS reread a disk, something like the above use of RELOG under TOS?

Pete

First of all, what version of ICD's hard drive utilities are you using?
AFAIK, ICD's latest version (6.5.5) lets you use it on any drive and
does -not- require the presence of a host adaptor...I think they came
out with it that way in this version because of the Falcon-it does not
have a host adaptor...per say... If you have an earlier version of ICD's
software, then my recommendation is to upgrade! :)

Terry,

Supposedly ANY of the Atari line can use Jazz or Zip drives, it's just that some of the earlier software and hardware doesn't handle the newer commands and SCSI bus arbitration the Jazz requires. Toad Computers would be a good place to start: I think that HDDriver from Germany is one of the newer drivers that will work, and recently I read in this newsgroup that Oregon Reserch is selling another that is especially designed for the Jazz/Zip drive's requirements. Good luck with this, as I'm soon to add a Jazz to my own project studio.

Regards,
MarkR

Don't know about the MegaSTe, but ICD made a mini SCSI host adapter that
worked inside the MegaST! Also the ICD-PRO version of the utilities will
work with your present host adapter. Toad carries it, in fact they
probably can tell you if that mini host will work on the MegaSTe also!
Try info@toad.net

I have both the "regular" ICD 6.5.5 and the PRO version of 6.5.5 and I
can tell you that you need the PRO (commercial) version of 6.5.5 to use
it with the Atari host in the MegaSTe! Also I do know that ICD made a
mini host board that worked in the MegaST, don't know if it also works in
the MegaSTE, but drop a line to info@toad.net and they can let you know
about both!

Don't worry, Atari never did a decent job of backing up their computers,
and they got around anyway! TOS is the hero, and it can now be run on Macs
and PC's, through Magic. Computer Direct in Edmonton has a TT clone, and there
are a couple out of Europe, available through Toad. C-Lab makes a better
Falcon than Atari ever thought of, and for some uses, GEMulator runs TOS
on a Pentium. Good software is still being developed, and the old STuff
is still ahead of its time!
TOS rules!

3774. MiNTNet prob. with remote nameserver and LAN

Newsgroup: comp.sys.atari.st
Date: 1996-05-31 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GE6LAAUQUp@tos.ak.planet.gen.nz>
Source record: 144303
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I use MiNT with MiNTNet to operate a small LAN (two machines) and also to connect to the internet via SLIP (and hopefully PPP when I can get it working).

When I am using the LAN and am not on the internet, I have /etc/resolv.conf looking like this:

```
domain ak.planet.gen.nz
nameserver 202.36.28.20
```

202.36.28.20 is my machine. This works fine, I can do "ping localhost" and it works perfectly.

This is no good, however, when I want to connect to the internet, because the nameserver is not my machine. so I have to change /etc/resolv.conf to look like this:

```
domain ak.planet.gen.nz
nameserver 202.36.28.1
```

Because 202.36.28.1 is the nameserver of my ISP.

This is fine while I am on the internet, but when I get off the internet, it cannot connect to that nameserver anymore, so things like "ping localhost" stop working. I have to change my resolv.conf again so that things are back to normal with the namewerver being my machine again.

This is a problem because it is, as you might imagine, rather undesirable to have to change /etc/resolv.conf every time I connect to or disconnect from the internet.

What I want is for it to look in /etc/hosts first, and if the address it needs is not there, then use the nameserver. That way, things will still work when I am off the internet, because it will look in /etc/hosts. But when I am on the internet, it will work too, because it will look first in /etc/hosts but since it will not find the address, it will then use the nameserver of my ISP.

My /etc/hosts.conf file has the following line in it (among others) which I thought would have the right effect, but apparently does not:

```
order hosts,bind,nis
```

I thought this would make it check first the /etc/hosts then the nameserver specified in /etc/resolv.conf, but it seems that it is not having this effect.

Any suggestions as to how to get this working correctly would be much appreciated.

Its a shame, really...I've got this 4 meg Falcon with an 810 meg hard drive-DeskTopper/TT-Touch keys equipped, and no way to hook up to the Internet...I just can't get Oasis v1.35 to work with it. I have Oasis working fine on my TOS 1.4 Mega 4 ST...I copied it -exactly- via floppy to my Falcon. (I even put it back in the same folder/hard drive locale) Same settings, same modem, nothing changed except the computer...and it will not work...When I click on "Internet"-"Logon" it starts, shows the "ATZ" and then the "OK" from the modem, and then says "No carrier" and lists the line from the script that message comes from...You can even hear the dial tone, but it never starts dialing...How do I get Oasis v1.35 to talk to my Falcons modem 2 port? Thanks in advance for any info! Oh, BTW, I'm using HS-Modem v6 (DRVIN.PRG and SCC.PRG) and no other serial port patches. HS-Modem is set up according to the guide in AtariWorld...Also I deactivated the Modem.CPX...I tried it with, and without, didn't seem to make any difference at all...Thanks again...

Nice isn't it?

>Sorry but i didn't know about Straightfax, but for sure you have to change
>some options. The first is that the VI is a 2.0 FAX machine NOT FaxClass 2 !!!

Yep, I'maware of that as far as I can remember the older Supra was also Class
2.0.

>Does Straightfax support this ?

Yes as far as I know.

>You could also use FaxClass 1 or much better is COMA (FAX/VOICE/FTP) Software.

The problem is Coma 3.30 has problems with the Vi, which are fixed in the
forthcoming 3.40.

However I've already paid for Straight fax and don't want to start paying
again, Coma is expensive.

ha-user@ux-01.bg.bib.de barked in U.COMP.SYS.ATARI.ST on 01 Jun 96:

: h>> Speaking of announcing: anyone know how to post in
: h>> comp.atari.announce? My newsreader says it was moderated, continue?
: h>> I didn't quite dare...
h>
h> So is this the right place for announcements now?

Since there's no traffic in comp.atari.announce, it makes sense to post
announcements here. Mind you, you'll get flamed back to the Stone Age if
you post a blatantly commercial message that's not Atari-related.

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: 922551@bud.swin.edu.au
Message-ID: <4oo7i6$2ad@lucy.swin.edu.au>
Source record: 144213

Hi, I was wondering if this was normal behavior... Whenever I load up a game which has been designed for the Jag Pad, even if it has an option for the normal joystick, the cursor or controlled sprite goes off to the right and stays there. I can go up and down with the normal joystick, but not left. This only happens in games which have been progerammed for use with a jag pad. Could it be hardware related? Any suggestions?

Kenji. (922551@bud.cc.swin.edu.au)

3782. Frustrated with CAB

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: daymon@mammoth.valleynet.com
Message-ID: <4oo6ms$5op@alpine.valleynet.com>
Source record: 144214

Hi there!

A number of months ago (like December thru February) I tried installing the CAB/STiK/etc. package on my 1040ST. I ran into a number of difficulties and the best results I got were connecting fine, but CAB went thru the resolving process ok but got stuck at "Receiving data (0 bytes)". Also none of the other programs (IRC, Telnet, etc) worked at all. I contacted a number of people and posted here, and all I ever got were the same old passe suggestions that I'd already checked with no sucess in getting it to work. I figured it was just that my machine only had 1 Mb and no hard drive. But now I have a Falcon with 4 Mb and a 540 Mb hard drive and I still get the same problems! I checked with my ISP and he said my config and dial files are fine. And they DO have true SLIP, as well as CSLIP and PPP. I have tried various versions, and now have the newest version (www130 w/ CAB 1.2b and AntMail 0.7.6) waiting for someone to give me some kind of hope of being able to use the thing! I am tired of looking at Unix prompts! So if anyone has any suggestions (not the old standby's either), I'd be very appreciative. Thanks!

Any PC supplier can provide a SCSI 2 hard drive to fit your machine. Ask him to supply it with parity disabled and set to ID 0 (any decent supplier will do this - if they don't, buy from someone else).

The price you've been quoted seems high to me. I'd expect these drives to be the equivalent of 120ukp or less by now (sorry, no accurate price conversion here).

>
>
>
Try using the function keys. They are meant to "mount" disks. Useful
when you accidentally click on a drive and dismount it.
Whether it will recognize it as a MAC disk after that is another story.

3787. Desktop picture

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: koh@pixi.com
Message-ID: <4oosf4$842@rigel.pixi.com>
Source record: 144219

Someone was asking earlier about putting a picture on the desktop while retaining their palette. Couple things:

1) I unfortunately do not use Thing, I use the Deskpic.acc
2) I had originally saved the 128 color picture in .GIF format.
That may make a difference.

Keith

This is nonsense. make is a standard command you find on any Unix
workstation. You must have made a mistake, e. g. your PATH environment
variable makes no sense. On Solaris make is located in /usr/ccs/bin.

s> solid like a tank, thank you. Outdated software? HA HA HA HA! It's
s> quite sad
s> when many of the Apple II apps are more useful than the ST ones..Thats
s> what you
s> call pathetic. And no future OS development? Ha ha ha ha, you must
s> be out of
s> the loop. Opendoc, cyberdog and quicktime vr...
Pete,

Why should everyone march to the same banner, we are not, afterall, all mindless drones. We do have a right to a freedom in that which we do so long as it does not hurt those around us!

Ok so we did not all choose Apple or IBM, does that make us any worse than those who did?

I realise you get off on annoying people who could not strike back any more than verbally, much like paedophiles who enjoy hurting children who are unable to defend themselves.

You are not appreciated here, so why persist in this juvenile crusade against those who do not worship at the foot of the Cupertino temple?

Why not go pick on others, like those PC owners you used to love to deride for their choice of machine, or is it because you are so spineless that you're worried they might respond with arguments you cannot hope to coun

Pete, i've used and owned most machines including a Quadra 840av and PC but I still use an Atari and enjoy the community spirit that has built up around this machine. It is obvious the Apple arena is lacking in such spirit if it has golems such as yourself using and backing it.

Please desist from spreading your drivel in here, it only serves to show and enforce your own misgivings at your chosen computing platform!

I'm sure Carl Jung would have something to say about your rantings, just a shame that he isn't about to analyse them, he would definately find them interesting.

3791. "Aliases" of addresses won't work in MiNTNet?

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GFBQDDUQUp@tos.ak.planet.gen.nz>
Source record: 144223
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

www.earthlight.gen.nz
phoenix.earthlight.gen.nz

I am using MiNTNet to connect to my ISP via SLIP. It works perfectly, except
that certain addresses cannot be reached. When I try to reach one of these
sites in lynx for example, I get the following message "looking up <host>"
as usual, but lynx remains this way for several minutes, before it says
"cannot access start file <filename>".
Ping just sits for several minutes doing nothing when I try to ping one of the
problem addresses, and finally exits. When I try CAB on a problem address,
it just sits for anywhere from 30seconds to 2 minutes saying "Resolving Host"
and then it comes up with "Error reading cache file <filaname>".

It seems that certain addresses cannot be turned into IP numbers somehow. These
same addresses work fine when I try them from my "shell" account, where I
ring up my ISP from a plain terminal program and use the software on their
machine.

The only common thing I can find between all the problematic addresses is that
they all seems to be aliases of other addresses. For example,
"www.earthlight.co.nz" is one problematic address.
When I log onto my ISP via shell and type "ping www.earthlight.co.nz"
it comes back with "phoenix.earthlight.co.nz is alive".
So as you can see, www.earthlight.gen.nz seems to be some kind of alias
for phoenix.earthlight.gen.nz.

Now if I log off from my shell account and log on via SLIP and try the new
address I have got, phoenix.earthlight.co.nz, it goes fine.
However, www.earthlight.co.nz still has the same problem as before.

Is www.earthlight.co.nz some sort of alias for phoenix.earthlight.gen.nz?
How can I use the alias version from MiNTNet?
Or have I got it all wrong?

In any case, any suggestions relating to this problem would be appreciated.

3796. Repair

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: slc.dennis.bishop@muskrat.com
Message-ID: <960601000208153352@muskrat.com>
Source record: 144228

Does anyone know of someone on the west cost or anyplace else that
can do repairs on an Atari Mega ST4 [16mhz]? It is my main system for
offline reading and text editing but I'll not be able to do anything
until July. But I want to line up someone. Over here in Hawaii there is
No One to reapir them anymore.

No.

(Big SNIP)
>>>>
First, I don't think there is a replacement for the internal Atari
SCSI host adaptor for the MEGA STE.
Second, the Software you need to be able to use it on the Atari
and any other host adaptor is the ICD PRO Software. This is NOT
the same as comes with the ICD Host Adaptors. Available for $50 from ICD,
TOAD and other Mail Order Atari dealers.
Seeing as how you don't need a Real Time Clock, get the LINK II
for the external SCSI Drive but use the ICD PRO software.

There was a discussion in c.s.a.a. about how CAB is a better solution than a Netscape equipped Mac/PC. Looks like CAB requires more than one meg to work if its installed correctly. More memory is required for a one meg ST which raises the cost and hack&slash to install.

High Daron !
I got this nice Modem !
Sorry but i didn't know about Straightfax, but for sure you have to change
some options. The first is that the VI is a 2.0 FAX machine NOT FaxClass 2 !!!
Does Straightfax support this ?
You could also use FaxClass 1 or much better is COMA (FAX/VOICE/FTP) Software.
Ciao

I don't remember the price - I would guess about $30 or so, but Best Electronics has technical manuals for most models of the Atari line. These are service manuals - the kind techs use to work on the machines. I'd post the contact info for Best, but I don't have it handy. :(

3804. WTB: Falcon 030 14 megs

I'm interested in a Falcon 030 with 14 megs at around these prices:

$1000 with 14 megs, color monitor, Cubase Audio
$700 with 14 megs, color monitor
$500 with 14 megs, no monitor

I live in the San Francisco Bay Area. Thanks, Matthew

Your point is valid. Until recently it was very much a techie affair
to get working - easy if you knew the terms involved - not so, if you
didn't. To this end I have raised the matter of implementing a Faq
formed from the point of view of the user. This will obviously take
some time to build though!

You make no mention of HSMODEM - have you installed that? If you have
then I suggest you wait for www131 which will be along soon. It is
much more resilient and thus problems will be easier to solve.

Now forgive me whilst I deal with Sinclap - he is probably the
biggest single cause of Apple's declining sales ...

You are clueless! You're inane rantings caused me to remove csaa from
my newsfeed. While I dislike you and your opinions intensely I still
recognised your right to spout off in an advocacy group. Do *not* do
so here.

If I see another thread from you in this group that is not reasoned and informed - and I mean reason in terms of how other people define it rather than your own perverted definition, then I will actively seek ways to ensure you cannot post here again.

By all means reply to this, but do it in advocacy where I will not be joining you.

If you feel the need to correspond on this matter by email, dont bother because I will consider it the same as posting another windup in this group and act accordingly.

By all means mailbomb me - it would lend a lot of weight to suggestions your provider be informed of your antisocial activities.

3812. Warp 9 (is it worth it?)

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4oq82u$j09@dodgson.math.psu.edu>
Source record: 144244

Hi!
I have just moved up from a Mega 4 with ICD AdSpeed to a Mega 4 STE. In spite of running at the same clock rate as my old machine, screen redraws seem a little on the sluggish side. I was wondering if Warp 9 would produce any measurable improvement. Opinions on this will be welcome.

Gustavo

3813. SCSI Upgrade for Mega STE

Newsgroup: comp.sys.atari.st
Date: 1996-06-01 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <13880_hsideras@mettav.demon.co.uk>
Source record: 144245

Hi Dan, on 31 May 96 you wrote:

d>
d> I recently purchased a Mega STE with a 170mb Quantum SCSI drive in it.
d> I've run into a situation where I'd like to add additional SCSI
d> devices, but I don't really have a good idea of how to do that.

All additional SCSI devices need to be hung off the DMA port in an external box with its own power supply and host adaptor. With drives being as cheap as they are is it an option just to buy a new bigger HD to fit internally? This won't sort you out if you need to add, say, a CDRom, Streamer, DAT, SCSI scanner or whatever though, but it does put off the day...

d> First, the SCSI adapter that is included with the STE is not
d> impressive.

This is true, but not too much of a problem. You'll only ever have an internal hard drive connected to it and it accepts the vast majority of standard SCSI1 and SCSI2 devices (see many earlier postings for the few limitations that do exist).

d> I don't really have any software for it that supports the drive I have,
d> and I don't know where the software came from that makes the drive work
d> now.
d>
d> The ICD utilities that I have won't allow me to format or partition the
d> drive, because it claims that a ICD host adapter can't be found.

This was the case with PD ICD utilities before the TT and Mega STe came along, with this internal drive problem. If you can find a copy of the PD ICD utilities from v6.2.3 onwards you'll be ok. Is ICD's BBS still online or do they have an official FTP site? Otherwise you'll have to mail them.

d> Anyway, since I'm going to be adding external SCSI devices, I started
d> looking at the ICD Link II -- it attaches to the ASCI port and provides
d> a Centronics 50 -- and it looks good. However, this means I'm still
d> stuck with the Atari host adapter for the internal drive. Will the
d> software that comes with the link II allow me to repartition the
d> internal drive, even with the Atari host adapter?

ICD Pro Utilities will, yes.

d> So, to replace the internal host adapter, I looked at a ICD AdSCSI
d> card. This beast apparently goes OUTSIDE the case. If this is the
d> case, do I have no internal drive?

If you remove the internal HA that would be right, but there's no need to. I run with the Atari host adaptor internally and an ICD AdSCSI externally with no problems and I've found the trick of booting from the external drive with no problems copying between the two - completely transparent.

d> Also, it has a clock, but I don't see how this would be useful with my
d> STE, since it has one built in.

Correct, it's not useful if you already have a clock.

d> Anyway, I'm trying to accomplish the best of both worlds here. I want
d> external SCSi devices that I can disconnect when I take the computer
d> somewhere, and I want the internal SCSI drive for the same reason. The
d> cached AdSCSI sounds great, especially if I put a larger (500mb) HD
d> internal, but is this practical?

Yes. I use an internal 540Mb SCSI 2 harddisk internally. The caching is no problem because ICD Pro utilities that come with a Link II work unrestricted with any host adaptor. If you stick with the PD ICD utilities the only limitation is that the caches are disabled, but you can easily add the freeware CACHEnnn or NBCBS or the shareware TCache.

d> Can I only have an external drive with this? Perhaps I should keep the
d> Atari host adapter and just try to find some utilities for it that
d> support more drives, and then get a Link for other SCSI devices.

No, you can have both drives running without problems. See above.

d> Ideally, I'd like to get a replacement internal host adapter and dump
d> the Atari one -- and also have an outside Centronics or HD SCSI-2 port.
d> Is there such a product?

Tom Harkman at ICD says that their MicroSCSI host adaptor was never intended for a Mega STe, never tested with it and would be unlikely to. It was built for the original 8MHz Mega ST. That said, it's possible to use one if you can find one and find someone who knows the right way to modify it - I've heard of it being done at Ladbroke Computing in Manchester, but I couldn't say for sure in the US. 'Ask Toad' is my standard answer...

Right. Let's see, about $149.00 (installed) for a 2 meg upgrade including
the memory board...its not "hack 'n slash" though. If its an STe, then its
only the cost of the memory...

BUT, Mr. Sinclair, I think its truly entertaining to watch Macs/PC's with
one meg of memory...(wrap plastic bag around head, tie off tightly, and
you'll get an idea of how your machine feels!) :)

<Please, don't anyone really try this!>

Hi Peeps :)

Have totally revamped my web pages, now rather than being stos specific, they are now aimed at ATARI Diskmagazines, Already have information from such zines as "Maggie", "ST Plus" and a few others, More are imminent as I await there responses,

These pages will hopefully keep you up to date with the diskmagazine scene, As the editors can update there sections as and when they like then all the latest information will be there,

Theres even screen shots and insights into each individual Diskzine,

The sight is still under construction and more diskzines are being added every few days as the info arrives, If you run a diskzine or know of a diskzine not featured then let me know or let the appropriate editor know of this service,

Only none commercial Diskzines will be featured, no Shareware, Liceneceware or profit making diskzines allowed,
As diskzines are made up of user input then IMHO it is not keeping to the spirit of the ATARI scene as I know it to charge and make a profit out of other peoples work, therefore the only honest diskzine is a FREE diskzine,

Diskzines are a source of new information, theres a whole world of ATARI users out there that do not have access to the internet, through diskzines they can have there say,

Check out the ATARI Diskzine pages (still under construction) and accesible through http://www.airtime.co.uk/users/stosser

Comments and feedback on this idea will spurn me on to expand it to all known ATARI diskmags, the question is, is this a good idea, will it be used?, if not then I am wasting my time, only you can answer that question, see the page, then comment, Thank you :)

Cheers.....!ynoT

Yes!
If anyone have good textual adventures for Atari that can run on mono,
write to me, and we'll trade them.
Legend of Sword is textual adventure from Silicon Soft, 1988. Please if
someone knows about similar game, or any other adventure grom Silicon
Soft, or maybe knows someone from Silicon SOft, mail me.
Karl Buckingham wrote this game. I think he is genius.

WWW 131 Released!!!
****

Ok I have just finished putting together WWW131 it can be found on my
www site as usual http://www.unn.ac.uk/~cju920/ plus quite a few ftp
sites I have also uploaded the file to. It is rather big (ie over
900k) so if you just want one or two of the programs in this archive I
will be uploading them seperately as well over the next couple of
days.

The main changes in this release are
Cab has a dialoge for changing servers etc and supports mailto
Cab.ovl forms should hopefully now work fully
plus has had mailto support added to it.
Most of the other programs in the archive have been updated in
some way also.
New additions to the archive are AtariIRC and Finger read the
docs with accompany these for more info..

As Always have fun.

Flinny.

AFAIK,
you still need to use the modem cpx with hsmodem and Oasis 1.35.
however, speeds should be set in the cpx such that 150 is equivalent to 115200,
138 equivalent to 38400, etc. A mate of mine certainly had it running on his
Falcon well, as do many contributors to this group.

>> found.
t>
t> First of all, what version of ICD's hard drive utilities are you
t> using? AFAIK, ICD's latest version (6.5.5) lets you use it on any drive
t> and does -not- require the presence of a host adaptor...I think they
t> came out with it that way in this version because of the Falcon-it does
t> not have a host adaptor...per say... If you have an earlier version of
t> ICD's software, then my recommendation is to upgrade! :)

Only the ICD Pro software will format without an IDC host adapter. It
costs less than US$50 from Toad and includes CleanUpST, which sold
seperately for about $30. The ICD utilities that are _legally_
downloadable and available free with ICD's host adapters will not work
without one. This is perfectly reasonable, since the only /legal/ way to
obtain that version is to purchase an ICD host adapter, or download an
upgrade from ICD's BBS (which still requires the ICD hardware).

I'm having the same problems as Mike Freeman. I tried the earlier versions, and now am trying the lateste version 1.13 but I'm still getting nowhere. I've set everything up as written. I have a slip account that Stik connects to and says connected. When I try to go to a site though, cab says resolving but nothing ever comes up. I've had all kinds of suggestions but nothing has helped. I have the correct dns # and I've tried grabbing the from (#) and the to (#) but nothing helps. I'm frustrated. By the way I'm using a TT with 4megs and a 120meg harddrive. I think Stik is the problem because my tech support guy said that I wasn't fully connected. Anyone with an idea, please feel free to offer it. I'd greatly appreciate it. Thanks.

: Warp 9 would produce any measurable improvement. Opinions on this will
: be welcome.

: Gustavo

I'd say, yes...it is worth it.
If you haven't already invested in Speedo GDOS, I'd highly recommend
considering NVDI. NVDI speeds screen redraws, and also adds a great
GDOS module to your system. NVDI GDOS supports speedo, postscript,
truetype, and standard GEMDOS fonts.

NVDI, and WARP 9 are pretty close in terms of exceling screen output...
and both are pretty much equally compatible with available software.
NVDI however, is still supported and updated frequently, and includes
a great GDOS replacement. WARP 9 is no longer developed as far as I know,
but it offers a really cool screen saver, and some neat functions like
desktop pictures...

If you already have a good GDOS such as speedo...warp 9 might be
the better buy for you in the short run. If you think you may decide
to get MAGIC (the latest in ST/STe/TT/Falcon multi tasking OS), or you
don't already have a good GDOS, then go for NVDI.

Hiya Mario...

Mario Becroft (mbecroft@tos.ak.planet.gen.nz) wrote:
: www.earthlight.gen.nz
: phoenix.earthlight.gen.nz
: The only common thing I can find between all the problematic addresses is
: that they all seems to be aliases of other addresses. For example,
: "www.earthlight.co.nz" is one problematic address.
: When I log onto my ISP via shell and type "ping www.earthlight.co.nz"
: it comes back with "phoenix.earthlight.co.nz is alive".

If this is a problem with MiNTnet, then it is a _real_ problem! MOST sites on the net will have a name alias of some kind (eg. ftp.cnam.fr is an alias for brunner.cnam.fr or is it the other way around?). You seem to be getting to grips with MiNTnet better than Marcus Finlay and myself. We've managed to ping each other via modem or null modem, but that is as far as we've gotten (sometimes that wont work either :-( ).

Ciao,

Chris Wilkinson,

Secretary of the still existing Canterbury Atari Computer Enthusiasts group, Christchurch, New Zealand.

PS. Good reviews of the Hades/Medusa/DirecT based 060 beasties in your last maggie, if only I had the money for one of those machines... :-(

3831. Falcon IDE HD problem with BlowUp FX installed.

Newsgroup: comp.sys.atari.st
Date: 1996-06-02 00:00:00 UTC
From: NG YEE KIAN <ngykian@pc.jaring.my>
Message-ID: <31B14F23.6809@pc.jaring.my>
Source record: 144166

Well can anybody offer any help ? I had to reformat my internal 2.5" IDE (120 MB SEAGATE ST 9145AG)
recently and found out that the formatting processing doesn't seem to work properly - after formatting, HDX.PRG
proceeds to mark my sectors as bad, until the message " Not enough memory to continue. " . From there I had to
reboot the falcon, so far I have tried to reformat the HD under various settings (for the FX's accelerator
function) but without any success.. I suspect the problem is caused by wrong timing to the IDE HD interface,
thus causing error formatting (or that my HD just turned into garbage...). Maybe I should try other formatting
software ?

Now I thinking of installing a 3.5" IDE HD to my falcon using the 2.5" to 3.5" cable converter
available from TOAD computers and SYSTEM SOLUTION. My concern is that I would encounter the same above
meantioned problem - I mean don't I have to reformat the HD to enable it to work under TOS ? Or is the IBM
formatted HD workable under TOS ?

Any help is much appreciated.

Sure it does exist. It's just that MiNT is smart enough to check it's own command line, so there isn't two (or more) versions. (ie one for 68k and one for 68030).

Look in http://www.umich.edu/~archive/atari/Mint/mint112b.zoo

You name it MINT.PRG for hardware memory protection on 030's, and MINTNP.PRG for no memory protection on 68k's (and 030's, if you wish)

RM> First, I don't think there is a replacement for the internal
RM>Atari
RM>SCSI host adaptor for the MEGA STE.

That is wrong, a long time ago when I was a proud owner of a MSTE I replaced the internal hostadaptor with one which allows up to 8 scsi devices. Unfortunately I don't know if it is still produced, but I can give the address of the original
manufacturer (sorry no e-mail)

Hard & Soft Computerzubehoer GmbH
Obere Muensterstrasse 33-35
D 44575 Castrop-Rauxel

Not sure if Practical Solutions is still around but if I'm not mistaken
Toad Computers (1-800-448-TOAD) still sells a cordless mouse although I'm
not sure who the manufacturer is...Good luck! :)

>: not left. This only happens in games which have been progerammed for use
>: with a jag pad. Could it be hardware related? Any suggestions?

One more thing you might want to consider is if your joystick has an
auto-fire option or not...I know on just about every Atari system I've
used that if the auto-fire is turned -on- it does strange things. Just
a thought! :)

(Slightly off topic, sorry)

"Flamed back to the Stone Age"

Interesting turn of phrase.

Are there different "levels" of flaming?

Just curious. (Yes, I know what flaming is, and have participated in a good charcoaling every so often)

John Maxwell Hobbs (jmax@interport.net) wrote:
:
: What do I do with a tar.gz file. How do I untar and ungnuzip it?
:
: Thanks,

If you are using a un*x shell account to access the net, leave the file on your net server and let it do the unzipping. I do this by typing the following from my unix prompt...

gunzip filename.tar.gz

..that will leave you a filename.tar left in your home directory. Some ISP's do not have untar sadly. There are versions of untar for the Atari available so find one of them from an ftp site, download the .tar file and untar, and read through the docs for untar to figure out how to work it! Again some patience may be required as untar is a sod of a thing at times...

Hope this helps...

Source record: 144190

Hello. My name is Peter Sundiata. My brother and I are attempting to install a 40 meg hard drive into an old 8088 computer that my wife bought from Radio Shack about 5 years ago (even for back then it was a rip-off). We no longer have any documentation and are having difficulty with the installation. We were wondering if you knew where we might get information for this attempt. It is an Atari PC3 motherboard with revision # CIO3272. We are wondering what the "w" jumper settings are to enable the board to accept the controller card for the hard and floppy drives. This is opposed to the direct connection to the mother board.

Any information you could provide for us would be most helpful.

Thank You!
Peter Sundiata

I don't use the modem CPX on my Falcon. In fact, I've been led to
believe it causes trouble when used with HSModem. My suggestion is
just redo the settings - and make sure you don't have any other auto
programs or accessories that touch the modem active.

OASIS 1.35 works fine with my Falcon using a PPP connection. Too bad
OASIS 2 won't work at all either for PPP or SLIP.

> Soft, or maybe knows someone from Silicon SOft, mail me.
> Karl Buckingham wrote this game. I think he is genius.

Anyone who likes text adventures would be advised to visit the
newsgroup rec.games.int-fiction which deals with playing IF or
Interactive Fiction (i.e. adventure games) The FTP site for this
group is ftp.gmd.de, in the /if-archive/ directory. Also, the
newsgroup rec.arts.int-fiction may be of interest; it is concerned
with creating IF.

I suggest you get a few Z-code IF game files (ending in .z3 .z5 or
.z8) from /if-archive/games/infocom/ and the interpreter program to
run them from /if-archive/infocom/interpreters/zip/atarizip.zoo, both
on ftp.gmd.de.

Some equally good games written with another development system have
a .gam extension, and are in the /if-archive/games/tads/ directory.
(Many of these games are packaged in a .zip file.) Their associated
interpreter is /if-archive/programming/tads/atari.tads2exe.arc.

End of advert. Thanks for reading.

>What do I do with a tar.gz file. How do I untar and ungnuzip it?

If you have tar and gunzip then its

gunzip filename.tar.gz
tar -xf filename.tar

Both programs are available for the Atari (check the MiNT directories
if you cannot find them - unix ports...)

Are you booting with NVDI? If so remove it, as this is probably the cause
of the problem. If not, then try giving it the video mode number on the
command line (or was it XaAES.CNF?). I haven't done this (it works ok for
me) so I dont know the exact details...

The sync only effects TV's - not VGA monitors.... oh, hang on - 640x400 -
thats a TV rez (ie not VGA), isn't it? Hmm... are you using the video mode
parameter already? if so, try removing it (so that XaAES doesn't try to
change video mode, and just leaves it in your boot-up res...)

Hi!

I have simular plans (I think I will use Linux cause it is faster...).
I want to connect my Falcon to several PCs. The PCs are, of course,
equipped with Ethernet Cards. Is there any way to use a standart
Ethernet card on the Falcon and are there any drivers for MinT or Linux?

I used XAES on VGA and had no problems. XAES takes the screen res from the desktop.inf file. If
NVDI works fine without XAES, it is XAES that decides to switch to VGA... Just use newdesk.inf to
set up the screen resolution - or get N.AES, it works fine with all video modes because it ueses a
clean method to switch the modes.

Atari World's publishers, Specialist Magazines Ltd, went into liquidation late March, along with the parent company, Compo UK. The last issue published was issue 11 - the one with the artcle on OS'. At the time there were rumours of possible buy-outs, but that now seems unlikely :(

I invested in Warp 9 over 5 years ago. Never regretted it. It runs well
with Calligrapher, my WP. However, if you use or aim to use MagiX 2 (or
higher) it will give problems. Some of Warp 9's features clash and are
impbilisd. I als lost the paste function in Calligrapher. It may be
worth considering NVDI4 as well.

3880. Gemulator For Laptops now shipping!

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <4ov5e9$924@news1.halcyon.com>
Source record: 144120

It's here. The long awaited notebook and laptop compatible version of Gemulator is now shipping and available from Branch Always Software, Toad Computers, ATY Computer, and other Atari dealers. The complete ready to go emulator costs as little as $119.95 U.S.

Gemulator For Laptops turns any Windows notebook or laptop computer into a portable Atari STE with full support for the mouse, modem, printer, CD-ROM, and unlimited access to the hard disk. No separate Atari disk partitions need to be created, and no hardware is involved.

As with other versions of Gemulator, speed is excellent. Gemulator For Laptops runs at close to Atari TT speeds when used on common notebook computers such as the Toshiba 105CS.

For the complete Gemulator For Laptops press release, browse http://www.halcyon.com/brasoft/gemlap.txt or see our web page at http://www.halcyon.com/brasoft for information on all three versions of Gemulator.

3881. Anyone else with new antmail problem?

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: lpayne@cix.compulink.co.uk
Message-ID: <DsFG83.6ww@cix.compulink.co.uk>
Source record: 144121

Today's new version of Antmail freezes while receiving mail. The byte counter stops, and a re-boot is the only way out. Anyone else getting this?

Mail gets sent OK.

Another annoying bug: when browsing the out-mail queue, attempting to view a message causes the external editor to create a new file instead. This file is in the out-mail folder, and has a one-character name. This one character is the first character of the name of the file that *shoulsd* have been opened.

This was in the previous version as well.

(Falcon TOS 4.04 14 Megs)

Source record: 144123

Most of the shops round and about have stopped stocking ST games, so
does anyone have or know where I can get hold of these titles?

Obsession: pinball game, one of the last new games titles.
Zero 5: Space shoot-em-up, another quite recent game.
Mega-lo-Mania: An old god game, I think the company folded not long
after its release.
Magic Pockets: Old plattform game.
Lemmings 2: Don't think this needs much explanation.

Thanks a lot

Tom Hayward

3884. Mega Ste floppy drive

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: carl@atari.demon.co.uk
Message-ID: <833911984_OASIS_@atari.demon.co.uk>
Source record: 144124

I have recently bought a Mega Ste with 4 meg memory, 47meg HD and TOS 2.05. I understood from an article in issue 38 of ST Format that the Mega Ste was sold with a High Density floppy as standard (as well as TOS 2.06). The manual does not mention High Density capacity, but when I go to the 'File' menu and choose the format option, I am presented with 'single-side', 'double-side' and 'high-density' options. On placing a high density floppy in the drive and requesting a double sided, high density format, I get the drive busy light, then after several minutes, an error box stating that the disk in Drive A is unreadable or damaged and the option of retrying.

When formatting a double density disk, the drive completes the task and informs me that there are 720,016 bytes availible. This would indicate that the drive is ineed not capable of using high density disks. Is there any way of testing the drive other than attempt to format a high density disk? I have lost the sellers phone no. to ask if the drive has been changed from an original high density drive (?).

If the drive is double density only, is it possible to make a straight replacement with a high density drive, without any further modifications to the system?

Please email me or post in this group with any information/suggestions, (email carl@atari.demon.co.uk)

Thank you for reading this and in advance of any help.

Carl.

Source record: 144125

Well, I finally got around to seeing if I could run AES 4.1 and do anything online at the same time. Good news, it works, almost. I can telnet into the university, and DuFTP works very well. However, CAB can't find non-local pages. I get an error #34, a file not found, and then a blank page. Is anyone else using AES 4.1, CAB, the CAB-for-MintNet overlay, and PPP? How did you get it to work? Note that I'm trying to do all this on my Crazy Dots 2 card so I can get glorious colour, but I'm not using NVDI (something which should change in a few days).

3890. Release of OASIS 2.05 and ICE 1.02

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: phil@yeadontt.demon.co.uk
Message-ID: <77415757_000001_OASIS_NEWS@yeadontt.demon.co.uk>
Source record: 144130
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

Hi Guys,

I have uploaded the following files to the Demon and Cnam FTP sites (ftp.demon.co.uk and ftp.cnam.fr respectively)

OASIS205.TOS

UPDT_205.TOS

The first file is a complete package of OASIS 2.05, the second file contains only the files that have changed between versions 2.00,2.01 and 2.05.

Here is a summary of the changes from ICE 1.01 and OASIS 2.01

ICE 1.02

- IGNORE allowed in logon script to allow sending of multiple lines.
- IGNORE/n now supported (sends back a CR).
- ICE online clock disabled it the user runs on an (M)STe/ST-Book.
- IGNORE features expanded.
- Delay system implemented.
- Documentation updated.

OASIS 2.05

- Problem with unregistered article headers fixed.
- Edit SIG problem fixed.
- When examining articles ready to post in the Internet window, after the article is exited (using ESC) the initial window's contents are not redrawn - fixed.
- When logging onto Demon with an existant HEAD.OUT file you no longer get an error, the program now appends the data.
- Local Post bug with exit back to desktop may have been cured.
- GEMDOS seek error trapping added when posting a mail mime document in the external editor.
- Inmail/Outmail flagging bug fixed.
- In the Outbound window the IP name is now shown in the same case as it appears in the ICE.NET file.
- Redraw recoding completed.
- Postbox only saves when read state of an item changed.
- Table added into the OA_CODER.
- Documentation updated.
- New outgoing mail/news no longer overwrites existant mail/news items.
- More updates to the redraw code.
- Auto-add of user name to yellow page routines recoded.

- Yellow pages problems cured.
- Scrolling selection of user name bugs fixed.
- Errors in detection of 'from name' whilst processing email fixed.
- Added support of MIME Partial items.
- Re-written Yellow Pages Auto Add to put new addresses into window for selection.

Nope!!
There is a location
www2.switchboard.com
that gives phone nos. anywhere in the states for people or for businesses.
It works on my u-no-what under W*****s and under lynx on my VAX,
but not under CAB.

Are you using stik or mintnet?
Its the cab.ovl which does the forms properly now.. at least the stik
one does for me.

Actually, I would like to amend a request for PPP - that it CHAP.

3899. WWW 131 makes problems even worse!

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: jmax@interport.net
Message-ID: <4ovs3v$pbe@interport.net>
Source record: 144139

If you're having problems with CAB 1.30 not loading any data from any or all hosts - that is resolving hosts, but not loading any data - 1.31 is even worse.

I do appreciate all the effort that's gone in to creating the package, but every new release becomes more and more non-functional to those of us who are having problems. I started with one of the earliest versions of the package, back when CAB was called HTML.APP, and it great!!!! Now, the only thing in the new package that seems to work is finger.

I have a feeling that many of the "bug fixes" are really compensations for shortcomings in the various author's ISPs. If a lot of the testing is being done on demon, that's a real problem. Demon is a very quirky system that does not strictly conform to standards.

> >but nothing is read to CAB.

> Well try IRC, if that doesn't work, try playing with the TCP parameters in
> default.cfg. Make all the values bigger or something. :)

Thanks to all for all ideas.
I tried IRC first, but it didn't work. Then I changed some values in
default.cfg, I can't remember right now what they were called. MTU or
something like that! Anyway, I changed it from 1006 to 3006 and when I
tried then, it worked!! At least Telnet and CAB worked, I never tried IRC.

Yippie, I thought!

But then I rebooted, and used NVDI, and it didn't work then, it was the
same result as when I started. So I thought that NVDI screwed things up,
and rebooted again without NVDI, like I did at first. But it didn't work
this time. Hmm... I tried to change the other values in default.cfg but I
never got it to work again. :(

I know that it's the right IP address I get, and I know I have the right
nameserver address. I use PPP on a Macintosh to the same provider and that
works fine.
I don't know if they use CSLIP, but I write only SLIP when I connect to it.
It does say "Header compression on" or something like that when I call with
a regular terminal program, like Connect. Could this be the problem?

But it's really strange since it worked once.

Oh, well, I'll try it some more, and until then I guess I'll have to use
the (Yuck)Mac(Yuck).

Thanks again everyone...

I think it might have been intended to cool an internal hard-drive or whatever you put in all that air-space in the Mega. I snipped mine years ago because of the clone-like whirring, doesn't seem to have affected anything at all... (touching wood).

I recently mailed Hisoft and got this reply on the 21st of May:

> We are currently working on translating the German version.
> There is no set release date, but it is at least 3 or 4 weeks
> away. The price has not been determined, but will probably be
> around the 100 UKP price mark.

BTW have you found this bug in the German demo of Papyrus 4? -
switch off the horizontal ruler, exit the program (thereby saving
this setting), restart the program, switch on the horizontal ruler,
CRASHH!! This happens all the time on my version.

Michael

3906. TurboBlanker & monitor damage

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: jklimch@larry.cc.emory.edu
Message-ID: <4p06kk$pia@larry.cc.emory.edu>
Source record: 144146

I just downloaded the Falcon screen saver & accelerator from Hensa. The first paragraph of the readme text is made up of warnings about how the program could destroy your monitor if it needs the synch rate. scarey stuff... Later on the docs say that the program turns on the energy saving mode of the monitor. I have an energy star compliant Sony 15sf monitor (bought at a closeout without a box or manual). Is anybody using turboblanker on such a monitor or knows whether the program is ok to run with it. Just thought I'd check before exposing my monitor to damage.

Thanks in advance,

Klimchak

3907. Re: DeskTopper...

Newsgroup: comp.sys.atari.st

From: greg_evans@delphi.com
Message-ID: <hZLMr8S.greg_evans@delphi.com>
Source record: 144147

I think there is some confusion going on here -- maybe on my part.
The Power Up kit is a CPU accelarator but someone in thsi thread
made it sound (to me) as if they thought it was a power on switch
you could put in the front of your Desktopper.

I also have the Desktopper and have moved my floppy to the front.
I did have to rip out the old floppy cable and manualy put in a
new one. I made the pin connections with hand pressure as I could
find nothing else with which to compress it, although I bought
something at Radio Shack.

I have yet to see a power supply in the US small enough to fit
in the Desktopper, although some have come very close. They
would also have to line up with the cutouts on the back.

MH> some action, but... Really, folks, haven't you heard of a kill file
MH> yet? If everybody who hates to read The Clap's drivel would just kill-
MH> file him, you wouldn't even see his posts, let alone respond to them,
MH> and there wouldn't be all this bandwidth wasted debating with him in a
MH> futile flame war.
MH> I smile every time my newsreader tells me it's killed more posts from
MH> The Clap...

Oh, I've gone much further than a kill file - between PURGE (which is now working perfectly) and ANTISPAM (under development), I never have to see another SinClap post. But since NOS doesn't allow me to pick and choose news articles, I'd rather not have system time burned downloading articles just to delete them at my end. Thus, I asked SinClap's postmaster to "encourage" him to learn a little netiquette.

And if he doesn't, the Archie bot is also under development. Almost any server will crash if the entire content of ftp.umich.edu shows up in a single mail bundle addressed to SinClap...

3914. MiNTos Help wanted

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: dhend@zetnet.co.uk
Message-ID: <833917602_OASIS_@zetnet.co.uk>
Source record: 144154

Hi all,
I've just recently installed a basic version of mintos on my machine - but
I don't actually have a clue how to use it.

I'd like to hook it up to the net if poss, using a dynamic IP.

If anyone can point me towards a "learning mint/unix" doc or give me some
e-mail assistance. Please get in touch.

ta for the time.

3916. ST ROM image

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: kroberts@rand.nidlink.com
Message-ID: <784.4899T1198T2658@rand.nidlink.com>
Source record: 144197

I'm hoping one of you ST folks can help me out. I need a TOS rom image to run an ST emulator. I know this can be a touchy subject what with copyright issues and all but I do own a 520 ST (I bought it yesterday at a GoodWill store). The ST didn't come with a power supply or disk drive so there is no way I can possibly transfer the rom image myself. If someone could Email me a copy I would greatly appreciate it.

P.S. Looking at the innards of my new ST I can see that it's previous owner did some extensive modifications to the computers memory. All chips have another chip piggybacked and soldered to them and these new memory chips are connected to each other at two pins. Looks like a lot of work! can anybody tell me how much memory the computer now has?

Thanks,
Ken

3917. Converting 1st Word+ files

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: rockywi@ix.netcom.com
Message-ID: <4otb0h$msb@sjx-ixn6.ix.netcom.com>
Source record: 144198

If anyone has experience converting 1st Word, and/or 1st Word+ files to PC compatible format, I would sure appreciate some suggestions on how to do this.

I have a ton of First Word Plus files to convert to a Microsoft Works or Microsoft Word compatable format.

Please leave e-mail, or voice phone me (toll free) @ (800) 473-0055.

Thanks in advance for your help.

3918. XaAES - how to get colour?

Newsgroup: comp.sys.atari.st
Date: 1996-06-03 00:00:00 UTC
From: wongck@ti.com
Message-ID: <wongck.308.000ACFDE@ti.com>
Source record: 144199

Over the weekend I was fiddling with XaAES (beta 5) on my Falcon.
Unfortunately I can only get it to run in monochrome. I tried both the mono &
colour version, but still ST high rez monochrome output only.

When I try to bootup in VGA, 16 colour (640x400) the screen goes black with
lots of white streaks going diagonally across -- looks like it is out of sync.
My Falcon is from US, and XaAES is from UK, so I guess that the sync does
matters here. Anyone have any ideas how to get it to do the correct sync ?

The screenshots from the WWW looks good, unfortunately I cannot view it on my
machine.

Regards
William

Agreed. $30(AUS) is not an unusal sort of price for any serial cable, and
you can spend up to $60 for a 3 metre (3 yard) cable, depending on the
quality you're looking at.

Of course, you can _make_ them for around $4-5(AUS).

sigh

Or Windows NT. It also works - with some restrictions - with Win 3.11 together
with win32s.

#>I tried it with SoftWindows 95 (of course). It has a hard disk image
#>like STonX but no host file system support. I didn't have any ST
#>floppies to hand to try out so could only run the supplied demo progs.
The demo has no host file system support. The full version is said to have
a special drive (I:?) which gives you access to all PC drives.

Ciao

Thomas

Hi!

In article <4p06kk$pia@larry.cc.emory.edu>, jklimch@larry.cc.emory.edu (J David Klimchak) writes:
#>[...] I have an energy star compliant Sony 15sf
#>monitor (bought at a closeout without a box or manual). Is anybody using
#>turboblanker on such a monitor or knows whether the program is ok to run
#>with it. Just thought I'd check before exposing my monitor to damage.
Most modern monitors (like the 15sf) support power saving which is activated by switching off hsync, vsync, or both (three different saving modes, the last saves the most). As TurboBlanker switches off the sync, there's no need to worry. Your 15sf will have no problems with it and will even consume less energy when TurboBlanker blanks the screen. But there are in fact some older monitors which are likely to be damaged when the syncs are missing. For example, some SM124s really don't like it (AFAIK TurboBlanker doesn't work when the Falcon is connected to an SM124 just for that reason).

Ciao

Thomas

In article @atari.demon.co.uk, carl@atari.demon.co.uk (Carl Houghton) writes:

> understood from an article in issue 38 of ST Format that the Mega Ste was sold
> with a High Density floppy as standard (as well as TOS 2.06).
No, it was sold only with Double Density floppy, and in most cases with 2.05 or less.

> when I go to the 'File' menu and choose
> the format option, I am presented with 'single-side', 'double-side' and 'high-
> density' options. On placing a high density floppy in the drive and requesting
> a double sided, high density format, I get the drive busy light, then after
> several minutes, an error box stating that the disk in Drive A is unreadable
> or damaged and the option of retrying.
> When formatting a double density disk, the drive completes the task and informs
> me that there are 720,016 bytes availible
You get the 'high-density' option in the format option because someone set the
corresponding switch (cannot remember which one) on the dip-switch bank inside the
computer. This does NOT mean that there is a high-density unit installed. Indeed,
you can be sure that there is NO such unit if the system refuses to format that way.

There exists kits to install a high density floppy (HD unit + chips) sold by
major distributors, such as Toad Computers in the UK.

Cheers.

Roland

It really sounds like you have a problem in your config here... mail
me some info and configs and ill take a look for you.

>I have a feeling that many of the "bug fixes" are really compensations
>for shortcomings in the various author's ISPs. If a lot of the testing
>is being done on demon, that's a real problem. Demon is a very quirky
>system that does not strictly conform to standards.

Why do you think demon doesn't conform to standards?
I have to say that none of the authors of any of the released programs use
demon there are a few testers here but none of the actual authors so
any bugfixes to fix "unstandard" methods demon use have to be done by
reporting bugs to the authors in the same way as anyone else they cant
try it themself.. that said I cant think of any program for stik which
hasn't worked with demon because of demon... the first ever
cab.ovl/html.ovl worked better with demon than the authors net account
:)

here is a list of current beta testers as you can there are a large
proportune at demon yes but 6 out of 21 people ?

>work if its installed correctly. More memory is required for a one meg
>ST which raises the cost and hack&slash to install.

Well, do you have any suggestions for me tho? My question was, does
anyone have suggestions about what I can do to get it functioning
correctly on my FALCON not my ST. And by the way, CAB DID run fine on my
old 1 Mb ST, other than this configuation problem that still persists, so
I think your info is not entirely correct. Please don't take that as me
trying to argue with you. I really didn't want this to turn into a place
to bring c.s.a.a-type feuds into a newsgroup where that doesn't belong. I
just want to get this working. Can anyone out there help? Has anyone had
the same problem?

Well this definately sounds like Cslip.. ask your provider if there is
a way of turning the header compression off?

>But it's really strange since it worked once.

VERY :)

3944. Re: SCSI Upgrade for Mega STE

Newsgroup: comp.sys.atari.st
Date: 1996-06-04 00:00:00 UTC
From: josk@stud.unit.no
Message-ID: <4p1a3o$60h@due.unit.no>
Source record: 143979

Rich Mier (rbmier@winternet.com) wrote:

: (Big SNIP)
: >>>>
: First, I don't think there is a replacement for the internal Atari
: SCSI host adaptor for the MEGA STE.

I believe Hard & Soft (Germany) has a replacement SCSI-adapter for MSTE.
It comes with SCSI-Tools and support multiple devices (The original doesn't)
and drives with/without parity.

: Second, the Software you need to be able to use it on the Atari
: and any other host adaptor is the ICD PRO Software. This is NOT
: the same as comes with the ICD Host Adaptors. Available for $50 from ICD,
: TOAD and other Mail Order Atari dealers.

I would recommend HD-Driver. It's faster, more compatible and has background
DMA-support for MagiC.

: Seeing as how you don't need a Real Time Clock, get the LINK II
: for the external SCSI Drive but use the ICD PRO software.

Or replace the internal SCSI-adapter with the H&S one, and add a Centronics
SCSI-port at the back of the MSTE.

Subject: Re: MAGICPC?

> Has anyone used MAGICPC as yet??? I havnt noticed any reports as to how
> it stands up compared to the Mac version.

I can't compare it to the Mac version, but it seems to be oriented towards a "fake" C: drive (I couldn't figure out how to import anything that wasn't already on that drive) and runs a bit slowly on a 486DX2/66 (but then, what doesn't?). Still, if it was the only way I had to run Atari software, it would be acceptable. However, I wouldn't but it unless I could get an English-language version. I do understand a bit of German, but it's more trouble than I care to go through to use my primary desktop if I have to translate everything - I don't _think_ in German and that slows me considerably during operation.

Please forward this to the newsgroup - I don't think I have direct write access from here (work).

John Maxwell Hobbs (jmax@interport.net) wrote:

: I do appreciate all the effort that's gone in to creating the package,
: but every new release becomes more and more non-functional to those of us
: who are having problems. I started with one of the earliest versions of
: the package, back when CAB was called HTML.APP, and it great!!!! Now,
: the only thing in the new package that seems to work is finger.

I don't know about that, I had serious problems (Couldn't access servers
within my domain, chrashes...) before 1.30 came along. Now everything works
great, even with my rather "heavy" set-up (MagiC 4, NVDI 4, lots and lots
of other enhancements...) there's no problems with CAB. The most annoying
thing with CAB 1.3 is that there is no external viewer for sources :(
How about adding that again Alexander?

: I have a feeling that many of the "bug fixes" are really compensations
: for shortcomings in the various author's ISPs. If a lot of the testing
: is being done on demon, that's a real problem. Demon is a very quirky
: system that does not strictly conform to standards.

I have to agree with you on that, although STiK is pretty universal unlike
Oasis/NOS. And I can't get STiK to work with slirp whatever I do :(

I have to say that I'd be quite surprised, Daron. There are very, very
few Class 2.0 modems about and I'd expect the majority of software to
work with Class 2. Try Class 1, which /is/ universal, if the software
does it.

A few thoughts which may help.
1.Have you checked that the serial port is functioning ? Try dialling
into a BBS using Connect or a similar prg to test this.
2.I believe it is essential to install the Modem CPX. Depending on what
speed modem you have the figure you need to put in the baud rate dialogue is
either 134 or 150 if you are using HSModem
3. Are you sure that the Dial script hasn't been corrupted in the
changeover ? You should see ATDT (or P) followed by the number after the ATZ

My question in point 1 is because you have a Desktopper and not the
std. casing. It could be that the conversion is faulty in some respects.

Hope that helps

Well, my copy of NVDI 4.11 ET 4000 arrived in the mail yesterday, so I spend some time trying to get everything working perfectly. Most things work very nicely, but Geneva refuses to work. I get two bombs, and the system locks up, even when the only two things running are NVDI and Geneva. Order doesn't matter, and the two don't cooperate whether I'm in TT Hi or using my Crazy Dots 2. Anyone have any suggestions? Getting the combination working would be very nice...

I use CoNnect with it...CoNnect finds the modem 2 port without a hitch
and functions perfectly...

> 2.I believe it is essential to install the Modem CPX. Depending on what
>speed modem you have the figure you need to put in the baud rate dialogue is
>either 134 or 150 if you are using HSModem

I do have the MODEM.CPX installed now, but it doesn't seem to make any
difference...

> 3. Are you sure that the Dial script hasn't been corrupted in the
>changeover ? You should see ATDT (or P) followed by the number after the ATZ

Well, I tried re-copying it (more than once) and I even re-installed the
whole bloody thing from scratch, and re-edited the new version but it
still makes no difference...

> My question in point 1 is because you have a Desktopper and not the
>std. casing. It could be that the conversion is faulty in some respects.

Oh, BTW, I'm running a "clean" system...I disabled all the CPX's (besides
MODEM) and deactivated all my ACC's (except for XCONTROL) and auto folder
programs (except for DRVIN.PRG, SCC.PRG, and FPATCH2.PRG), so it should
not be a conflict there...

I can't imagine why it would though...nothing is changed, except that
your keyboard goes through a series of different connectors...

When I do an Internet/Logon, this is what I get:

```
ATZ
OK
ATDT 886-6086
NO CARRIER
input line cwait 50000 "CONNECT 1200" "BUSY" "NO CARRIER"
```

I have a few other questions, though...I'm using an old SX212 modem, could
that be the problem? Do you have to use the 68030 version of NOS? Also, do
you have to have BCONMAP.PRG running? I'm using FPATCH2.PRG...Thanks for
replying (this time) and thanks in advance for anything else! :)

I am also looking for a printer driver for my BJC4000 (not 4100, but close enough). I know it works with LQ2550 and BJ10 drivers, but I haven't been able to get a good-quality printout with gif images in my Pagestream documents. I am just thinking that the driver may be the problem. If not, then it's Pagestream's handling of images or something. Any thoughts?

Garfield Smith wrote:
> Could anyone tell me about this emulator ?
> What software will it run ? Is it worth buying ? Can it still be bought.

PC ditto 1.0 (and 2.0) is a software emulator that runs most all software written for the PC-XT 8088 and 8086 computers. It will run DOS 3.3 and DOS 5.0 (to my personal knowledge). It will run WordPerfect 4.1 and possibly 5.1 but not WP 5.2 and above. It runs DBIII and FOX Base ok. All text based application that I used worked fine. It don't do Windows. The more graphics you used the slower it got. However, I used it for displaying PICTURES that didn't have an Atari compatable viewer. It was great for Quicken 4.2 (didn't use it on the upgrades). My bigest beef with the Atari was its lack (at the time) of good checkbook/financial software, so pc-ditto worked great.

I upgraded to pc-ditto 3.0, included a hardware card with a NEC-V30 CPU. This was much faster and more reliable then the software emulator, actually ran at an Norton SI rating of 4.2 (about the speed of an AT clone (286)) however, it still was only emulating a PC-XT 8086 8088 cpu, so that reduced the software field. Graphic games worked much better and faster then those run on a native PC-XT with a NEC-V30 processor. (I had an HP Vectra laptop running on a NEC-V30 processor and tested them head to head).

The primary limitation is the PC-XT world of software. Atari PD is much better then the PC-XT commercial stuff (in my opinion). I have since unplugged the PC ditto emulation and use my Atari for Atari software and bought an IBM for running IBM software.

PC-ditto software emulation sold for $90 US and TOAD still sells it (at a lower price). The PC-ditto hardware emulator sold for $350 US and I haven't seen it for sale anywhere. Mine is wrapped and packaged up. I have taken it to user group meetings just for the fun of it. It really demonstrates the ingenuity and innovation of the Atari programmers.

That's all for now,

Ron

Source record: 143997

PC-Ditto provides a slow IBM PC emulation, by slow I mean very slow as I guess it runs at about 1-2Mhz I would guess. As to whether it is worth buying it all depends what you want to do and how much it costs. If you want to run windows, any modern PC software or any recenrt games then you might as well forget it. If you just want to run some old DOS packages then it might be wor worthwhile. If you do decide to get a copy you will also need a copy of DOS, I think version 3 is prob
think version 3.2 or 3.3 might be best, version 4.01 doesn't seem to work very well, I don't know about any later versions.

By the time you have paid out for a copy of PC-Ditto and Dos you might be better buying a secondhand PC. You should be able to pick up an old 8086 or 286 machine fairly cheaply, either would run much quicker than PC-Ditto on an ST.

I don't use CAB under MiNT as I can't get the ppp connection running (pppd tells me something about 'unknown protocol' while negotiating with the other side and hangs up a minute later) but this comes to my mind: if CAB and cab.ovl are on a minix-fs partition their execute permission must be set. Have you checked this?

3965. Internet Phone type program for Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-06-04 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <DsHsq8.LIL@news.hawaii.edu>
Source record: 144000

Greetings,

I was just wondering whether anyone is working towards a program
for the Falcon that would permit carrying on telephoneish conversations
via the net (as in Cooltalk and Internet Phone programs for PCs.) It
occurred to me that this should be reasonably easy for the Falcon, due to
the operating system calls in place for recording and playback of digital
audio, and of course, integrated digital audio hardware.

If this isn't underway, perhaps it might be a project worth
pursuing? Any thoughts on this matter?

Aloha,

John Perez

CH>me that there are 720,016 bytes availible. This would indicate that
CH>the drive is ineed not capable of using high density disks. Is there any

There have been several versions of MSTEs, the early ones were equipped with double-density drives, the later ones with hd-drives.

CH>way of testing the drive other than attempt to format a high density disk?

The only way I know to find out what capacity your drive has, is to open your MSTE and to tell us the productno. of your floppydrive.

CH>If the drive is double density only, is it possible to make a straight
CH>replacement with a high density drive, without any further
CH>modifications to the system?

Nope, when you bought a MSTE equipped with a double-density drive you first have to change the drive (any pc-drive is possible unlike normal STs where you have to buy special drives which have jumper for the HD-sense signal). Then you must replace
the internal floppy-controller (WD 1772-02) with an AJAX-chip. Sorry guys, I know a lot of you use the original WD with hd but one day it'll break. O.K. Then it might be possible that you also have to replace a PAL installed in your MSTE but that
varies from MSTE to MSTE. Try to find out if your MSTE has a label C301901-002 on chip no. UA02. Then you are lucky and don't have to change the PAL. Otherwise call best-electronics for PAL C301901-002 because you might have PAL C301901-001 in your
MSTE (but thats another story because there is still some soldering necessary)

From: boyd@zeno.math.fsu.edu
Message-ID: <4p0t7u$5pa@news.fsu.edu>
Source record: 144011

I am downgrading a 1040STE's TOS version from 2.06 to 1.62. The 2.06 chips I am removing are the same size as the ROM sockets. However, the 1.62 chips are smaller by four pins. This is normal, and I have the information on how to change the jumper pads on the motherboard to reflect this other type of chip. However, I don't know which pins the chips should be in! That is, the sockets being larger allows the chips to be put in a variety of ways. Could someone please tell me how they go in? All the way over to the right or left (when viewed from the front of the machine)? In the middle (weird, but possible)? For the technically minded the 1.62 chips are one of type 571001/27C1000/531000, I think :-).

PLEASE email all responses directly to me. I will post a summary. Thanks in advance!

Incidentally, for the curious, I'm downgrading the TOS to improve game compatabilty. TOS 2.06 conflicts with lots of copy protection schemes. This machine will mostly live on my living room TV for games, and has a hardware switchable 16mHz processor upgrade and an internal fan installed. I call it my "couch potato", as that is where it sits while I'm gaming.

>of the problem. If not, then try giving it the video mode number on the
>command line (or was it XaAES.CNF?). I haven't done this (it works ok for
>me) so I dont know the exact details...

Yes I am using NVDI 3.0. I will try disabling it tonite for XaAES.

>The sync only effects TV's - not VGA monitors.... oh, hang on - 640x400 -
>thats a TV rez (ie not VGA), isn't it? Hmm... are you using the video mode

Dunno... I am confused with the rez as well. I wrote 640x400 but I mean
setting 16 colours, 80 column & no double line. So any ideas on what pixel
count that represents?

>parameter already? if so, try removing it (so that XaAES doesn't try to
>change video mode, and just leaves it in your boot-up res...)

I tried using -video n but no use.

```
STe with 4 megs memory, TOS 2.06.............$230
Upon request, will include older versions of UIS 3 (v3.30) and Warp 9
(v3.5), and Flash 1.6 with the STe at no extra charge. (I found it
cheaper to buy used copies of the newer versions than to upgrade). Also
will include Publishing Partner (ancestor of Pagestream) upon request.
-
SM124 monochrome monitor (in original box)....$40
SM124 if purchased with STe..................$30
-
Practical Solutions Monitor Master switch.....$20
-
Replay IV sound digitizer cart (w/software)...$35
===============
-
COD buyers pay actual shipping charges + COD fee in addition to the
above prices. No COD's on orders totalling less than $50.
-
Anyone prepaying gets free shipping and, if the total is $50 or more, a
10% discount off the above prices
-
Any other offers will be considered, and I might me willing to trade
for certain items (i.e. the whole setup for a bare-bones Amiga 1200 or
A2000 with revision 6.2 motherboard and SCSI interface, the STe alone for
a nice SVGA monitor to use with my Falcon, the Replay IV for a 386SX
motherboard, etc.).

Source record: 144023

Hi Carl, on 03 Jun 96 you wrote:

c>
c> I have recently bought a Mega Ste with 4 meg memory, 47meg HD and TOS
c> 2.05. I understood from an article in issue 38 of ST Format that the
c> Mega Ste was sold with a High Density floppy as standard (as well as
c> TOS 2.06).

The earliest Mega STe's came with a double density drive IIRC.

c> The manual does not mention High Density capacity, but when I go to the
c> 'File' menu and choose the format option, I am presented with 'single-
c> side', 'double-side' and 'high-density' options. On placing a high
c> density floppy in the drive and requesting a double sided, high density
c> format, I get the drive busy light, then after several minutes, an
c> error box stating that the disk in Drive A is unreadable or damaged and
c> the option of retrying.
c>
c> When formatting a double density disk, the drive completes the task and
c> informs me that there are 720,016 bytes availible. This would indicate
c> that the drive is ineed not capable of using high density disks. Is
c> there any way of testing the drive other than attempt to format a high
c> density disk? I have lost the sellers phone no. to ask if the drive has
c> been changed from an original high density drive (?).

Grab Profile v2.14 from HENSA - it reports what capacity drive uou have as
well as TOS versions and absolutely everything else.

c> If the drive is double density only, is it possible to make a straight
c> replacement with a high density drive, without any further
c> modifications to the system?

I'm not entirely sure, but seeing as you've got the Hi-density option
available in the format deaktop option I'd hazard toguess it's a
straightforward swap.

3989. TRADE (US): STe, etc.

Newsgroup: comp.sys.atari.st
Date: 1996-06-05 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <RZIszig.lmcclure@delphi.com>
Source record: 144024

I have an STe with TOS 2.06 and 4 megs of memory for trade for any of the following:

- SVGA monitor (preferably capable of 1024x768 non-interlaced)
- Iomega ZIP drive (with at least two disks)
- Syquest EZ-135 drive (with at least one cart)
- Amiga 2000 (preferably with revision 6.2 motherboard)

~

I also have the following items to add in the trade to sweeten the deal where necessary: SM124 monitor, Monitor Master switch, Replay IV sound digitizer cartridge. I will also consider trading any of these items in exchange for items of equivalent value (i.e, the SM124 or Replay IV for a 386SX motherboard or 16-bit PC sound card with Sony CD interface).

3991. Write ON on Falcon030

Newsgroup: comp.sys.atari.st
Date: 1996-06-05 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <ZXPurcp.lmcclure@delphi.com>
Source record: 144026

When I moved from an STe to a Falcon, one of my favorite programs bit the dust, although in a peculiar way. Write ON, the "younger brother" of Compo's Write Now, which I originally obtained off an ST Format coverdisk, will run fine on my Falcon (even in 640x480 16-color mode), but absolutely refuses to print...even to disk!

-

Attempting to print direct to the parallel port, using Write ON's faster routines, or even via the slower BIOS routines results in a lockup (i.e, the print dialog comes up, but my laser printer indicates no data is ever recieved and the only way to escape is to reset the computer). Attempting to print the file to disk results in disk activity, but once again, a lockup, and when the file is examined, it is evidently never closed, as it has 0 bytes.

-

Any solutions (or even ideas) on how to get Write ON to print on a Falcon? While it far from the only publishing solution or word processor I have, I do have some documents already in that format, and also, I rather like this speedy little word processor for some tasks.

> Any suggetions grateful !
>
> ATb.

Basically, any (and all) computer systems (that I'm aware of) come in two basic chunks: kernel and shell. The kernel is the operating system, and the shell is the user interface. On PC's the kernel is DOS and the shell is either command.com or Windows(tm of Dollar Bill). On Atari machines, the kernel is TOS and the shell is GEM.

(Actually, it's a bit slipperier than that, GEM is an API for the shell, by and large, but there you have it. The difference between graphic API's and command-line shells is pretty blurry.)

Under MultiTOS, the 'shell' is a later version of the AES (Application Environment System). This API is responsible for the whole 'look and feel'. It's what the user sees and interacts with under the control of various programs. The kernel under this system is one version or another of MiNT.

Answer to question 1: Yes, it is true.

Answer to question 2: Yes, it is. There is a 'however', however :)

Unix is more than just an operating system (kernel) and an interface (shell). It's a complete methodology. For example, an application expecting to talk to a printer expects to find something called /dev/lpr which is a device linking to a driver that manages the printer.

Or, it expects to find hostnames in /etc/hosts, and user information in /etc/password.

There are dozens of examples of these. Unix incorporates dozens of standard files in known locations, and a fairly detailed directory structure (sporting filenames that are not restricted to the piddly 8+3 format used by DOS and TOS)

to comprise a fully functioning system. It's as much
a methodology as anything else.

All that said, there is a system called MiNTOS which allows you set up this kind of
structure, and all the relevant programs that a basic unix
setup requires, on a partition on your Atari HD. This partition, however, is not a standard
TOS format, (but is actually Minix format) in order
to support the extended file-naming conventions.

Yes, it's possible. No, it's not for the casual user. For the last two years or so, now,
I've been running unix software on my machine to the
virtual exclusion of all else. My mouse is mostly gathering dust. And it's _very_ fast. :)

What exactly does "the drive some how doesn't work anymore" mean in this case? Does it spin up? Is the drive recognized by formatting and partitioning programs? Have you tried testing it with CHECKHD (should be on atari.archive.umich.edu) or other low-level HD check programs?

>MB SEAGATE ST 9145AG)
>recently and found out that the formatting processing doesn't seem to work
>properly - after formatting, HDX.PRG

I have not reformat my falcon IDE drive before but I did encounter a BIG FATAL
problem after I reformated one of IDE HD on my 486DX. I lost the entire HDD
and the manufacturer told me that I should not have format it as IDE drive are
preformatted and not suppose to be reformat by users. I lost an entire 840M (
luckily that was my 2nd 840M HDD). It seems that all the cylinders marking
are gone after the format.

Sorry if I brough bad news to you.

Mail bombing is not only stupid and infantile, it harms innocent users
on the same (and related) systems. Don't do it, just try to ignore him.

Better still, get a newsreader that allows you to automatically not
download his drivel.

You can install an external viewer for sources like any other external viewer,
just enter '*.html,htm' for the extensions.

>Could anyone tell me about this emulator ?

It's very old, but it works. It also recognizes my MEGA STE's internal HD but won't use it!

>What software will it run ? Is it worth buying ? Can it still be bought.

It runs plain DOS programs, and is no longer sold so it can only be bought second hand. There was a brief appearance of PC-Ditto II, a hardware solution, but that flopped.

>Hi all,
>I've just recently installed a basic version of mintos on my machine - but
>I don't actually have a clue how to use it.

MiNTOS itself merely adds the ability to have more than one user on the
machine and to be able to start specific services at boot time, essentially.
To use it for anything useful you'll need the GNU tools such as ls, rm etc.

>I'd like to hook it up to the net if poss, using a dynamic IP.

You'll need the MiNTnet distribution go get networking running. MiNTOS will
help as it will allow you to start all the relavent daemons. You don't need
MiNTOS to run MiNTnet, however.

>If anyone can point me towards a "learning mint/unix" doc or give me some
>e-mail assistance. Please get in touch.

MiNTOS's look and feel are based upon SunOS/BSD 4.3 style UNIX, so if you
get a book on those they should give you a good working knowledge.

>
>THeo
>
Hello

I've running CAB with the CAB-for-MintNET overlay on my TT with a
Crazy Dots 2 card, NVDI and N.AES (AES 4.1). The most things like DuFTP
works fine but with CAB I've problems. CAB itself works fine but if I
try to go to an URL I gets almost every time a blank page.
The first time I used CAB it showed every page I visited. But
now...:-((
BTW I'm using CAB 12b. I also tried the latest version but with this
I get wrong colors.

So if anyone could help us please let it know.
Regards
Martin

Use the F-keys. F1 is drive a:, F2 is drive b:, and the higher
key, IIRC up to F7, Correspond to the partitions selected in the Specter.prg
initializations. As Pete implies it's in ther manual.
If this works for ZIP drives, I don't know, since I dont have a zip
drive to test, but Spectre SHOULD work with almost any SCSI device.

: I recently mailed Hisoft and got this reply on the 21st of May:
:
: > We are currently working on translating the German version.
<snip>
Thanks for the response, however thats what HiSoft have been saying since
Oct 95 (with emails to prove it)

: BTW have you found this bug in the German demo of Papyrus 4? -
: switch off the horizontal ruler, exit the program (thereby saving
: this setting), restart the program, switch on the horizontal ruler,
: CRASHH!! This happens all the time on my version.
Yep same here, thought it might be cos it's a demo and in German (me
thinks the German tos is a bit different BUT before I get flamed for
suggesting the German tos is different PLEASE remember I said "me thinks")

Note also that there is NO word count (not that I could find) or case
conversion (even 1st Word plus has both) BUT I still think it's a great WP
and worth buying/updating, unless I buy (dare I say it !!) a clone 1st...

Over here in Oz you can pick up a Pent 100 with a 1.2gig HD, 8meg of ram
and a 15" SVGA monitor for under $2000 including lots of the latest software
(word 6 etc)
Ummm tempting.... and we can't even get an English copy of Papyrus for
any amount of cash.... The clone is looking a little better every day....

Hi All,

Just to let you know about the first meeting of Wessex Atari Group

DATE: Monday 10th June 1996

TIME: 20:00

PLACE: Leigh Park Community Centre, Havant, Hampshire, UK

All Atarians are welcom :-) Please contact me if you need directions, or if
you just want to let me know your coming :-)

I can be contacted as below, or voice on 01705-611847 :-)

Hope to see you all there :-)

Yours Roy

Hi All,

Just tried out the new CAB, BRILLIANT :-)

At last I managed to register for Futurenet :-)

Lots of thanx to FLINNY for the readme docs, and all the other help he gives here and in NeST, keep it up :-)

One question for you all, the new CAB allows a Text Editor to be loaded to allow you to send mail from CAB. As I am an awkward B****r, I insist on using CAB in ST Low Res, 'cos I like having some colours, anyone know of a Text Editor that will work in ST Low Res?

Thanx in advance

Roy

4013. TT screen help?

Newsgroup: comp.sys.atari.st
Date: 1996-06-05 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4p4pem$s35@madeline.INS.CWRU.Edu>
Source record: 144048

I need some help with a minor, but annoying problem.
I have a recently acquired TT, running Thing. I have Thing setup with a pretty blue pattern, that's pleasing on the eyes. However, while it is bootimg up, It has this sickly snot-green screen, that jars my nerves and artistic sensibilities. If I run another prog., like connect, that doesn't fill the screen, what's left over also has this sickly green color.
I never had this problem before, since I had a mono-st.
Anybody know how to fix it? Of course, its not in any manual.

Another things to come from Eupore Online, you have to deal with those idiots who have nothing better to do than e-mail you with a bunch of crap that have no idea about. These are true stoies:

I reply to Mr. Do FAQ asking where I might find versions of those games for my Atari computer, since they are listed under the home versions. AOL Boy #1 asked me where I can find the PC version! I'm asking for the "ATARI" versions and he ask me that?

And I happen to find a very rare Rubik's Cube game for the 2600. More rare than Atari Video Cube which is the same game. For those who don't know, some guy named VGR keeps a list of old games and rates them according to the rarity. And this game is exterme rare. AOL Boy #2 today says that it's hard to find, but NOT that rare. Who should I believe, a vetern of the Internet who has a large collection of 2600 games, or some clueless newbie twit who can only play Combat on his stupid PC running Windoze 95?

I can imagine what the wry Brits would say to their fellow countrymen who are just plain geeks and dummies... :)

This is my first time in hearing about mods and trackers. Does this software manipulates (if possibly, on the STE, both sound chips?) the sound chip and how does one do for muscial notation for input? And, finally, what is the best mod player for the STE? And is it possible to get this software thru mail-order since I don't have a telecommunication facility available on my STE?. Thanks for any help anyone can offer me on this topic./ Al Vazquez

So far I have had almost no luck vith Oasis 2.05 running ppp. I'm using a 4MB MSTe with SM124 and USR28800.

I get my dynamic ip and can ping numerical addresses, but nothing else. Resolving does not work. ICE tries to connect to the dns but without respons. What does "domain server" mean? I have set both this and "name server" to the address of my "domain name server". Strange! Is there a "default gateway" setting somewere?

If I change the news and mail servers to numerical addresses in the setup ICE can't find my dyn. ip anymore and after a timeout my isp drops the line. Very strange!

As the resolving does not work I get no address to the news server (255.255.255.255). If I change this after login to the correct address and then kick the news server again I get nothing but checksum errors.

I am running Oasis1.35+NOSpop3 in singletask mode under Geneva without any problems at all. If I try Oasis2 under Geneva ICE exits with a bus error right after startup.

I had to make quite a lot of changes in the Demon STARTUP.NOS to get it to work with my provider. Actually I had to split it up and put some commands in a script to be runned after the ppp line is up. If I had all commands in STARTUP.NOS I got nothing but dns-timeouts.

These commands has to be entered after the ppp-link is established:

```
hostname sl0
smtp gateway mail.tripnet.se
pop mailhost mail.tripnet.se 3
pop kick
smtp kick
nntp kick
```

I've got the impression that ICE tries to kick the servers right after login before the link is up like the original Demon STARTUP.NOS does. Is ICE capable of getting my dynamically allocated hostname? In NOS the command "hostname sl0" does this.

Bug:
The time-zone settings does not work. Testing the GMT+2 settings gave these actual time changes in Oasis:
SST: +8
MES: +2
IST: +5
FWT: +2

EET: +2
CES: +2
All settings showed up correct in the ICE.NET file but Oasis
interpreted some ok and some wrong.

To me it seems strange why they have to alter the system clock at all.
Possibly it had to be altered for NOS to work but with ICE it does not
make sense at all. Both Oasis 2 and ICE should be able to read the
time zone from the ICE.NET file and simply add this to the system
time when needed. The way it works now all files time stamps are
wrong, and other programs that also uses the system clock can't be
runned in parallell.

I just picked up the game "Little Computer People" for the ST at a flea market. No box, no dox. When the game starts there's this little guy standing in the attic and a dog running up and down the steps. Can someone tell me how to make the guy move? And what the object of the game is?

Thanx!

Good idea.

Also something to run alongside CAB to deal with Real Audio files
should be relatively simple for the bird to handle.

Maybe time to start learning programming?

cheers

Ed.

Hi,

Farag Elburki user (mbge4mdc@meehpb01.ee.man.ac.uk) wrote:
: In article <4nsim9$958@ux-01.bg.bib.de>, ha-user@ux-01.bg.bib.de (Schueler) writes:
[this was me]
: > [...] and having seen MiNT's slowness
: > on my MegaSTE, [...]

: Okay, you're wrong - sort of. Not about the Linux information, but about
: MiNT. I use MiNT frequently with my MegaSTE and MiNT itself is not slow -
: it's the poor Atari attempt at a multitasking GUI under multitos that
: slows things down. The latest version of MiNT combined with AES4.1
: (if you can get it) is fairly useable, and the new AES replacements
: are trying to get their speed up as much as possible.
[I broke the lines here]
I didn't refer to MultiTOS, but to MiNT with a command line shell, when
I said that MiNT was slow. Or what would you call it when it takes
several minutes to format the "cp" man page? I've honestly asked myself
what is the system doing all the time? Can't be swapping, can it? AFAIK
a 68000 CPU can't be used with a swapping OS because of its missing
PMMU. So what did it do? Took longer than LaTeX under MagiC... :-(

: Whilst they are still a bit unstable, XaAES and oEASis show what sort
: of speed an Atari can mutlitask at without having to resort to assembly ;)
I wouldn't want to program it ;-), but what's so bad about assembly?
If the Behnes can handle it, and it seems so, then why should I want to use
an OS written in C when the assembly one is several times faster when
it comes to respond times?
And, to make me see the real thing ;-), could someone please tell me
where to ftp XaAES and/or oEASis? Never seen any of those here in
Germany, all N.AES (which is commercial, aren't the others Shareware or
such like?).

: I can't remember why the original poster wanted Linux, but there's
: a hell of a lot of good unix stuff running under MiNT if you want it.
But not with a 68000 CPU, and not with only 4 megs of RAM. Or is it
just a configuration problem that I have here? Any hints welcome!
I've simply installed KGMD, without net or X, and... it CREEPS! :-(

Thanx,
Erik Meltzer

Umm, I know that they don't go in the middle but closest or farthest away
from the orientation notch...you could try it both ways. When I put TOS
2.06 in my STE (which I no longer have) the techs at CodeHead told me that
it wouldn't hurt them, just wouldn't boot up if they were in wrong and
just to reverse them...(they both go the same way, too) But, why not call
Brad Coda @ Best Electronics (1-408-243-6950 1pm-4pm PST) and order the
$49.95 STe TOS switcher...its easy to install and would give you the best
of both worlds...Later! :)

4033. Slirp and STiK?

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: Par Larsson <y94parla@und.=?iso-8859-1?Q?=EDda.liu.se>
Message-ID: <31B6AAA8.C70@und.ida.liu.se>
Source record: 143913

I'm having some troubles with getting Slirp and STiK to work together. I can connect and use CAB
but only with IP-numbers, so there's something wrong with my nameserver, but more importantly:
it's too f*****g (sorry) slow! I use a 14400 modem, so it should be reasonably fast. There must
be something wrong in my configuration, because the read diode only blinks occasionally, at full
transfer speed it should be lit constantly. Also telnet refuses to work, when i try to use an
IP-number it bombs out on me. I think that has something to do with the slirp.telnetd helper
application, which I don't have (where can I find it?). Please help someone, this drives me nuts.

Kind regards, P.Larsson

>anyone know of a Text Editor that will work in ST Low Res?

I don't think any of the major text editors (QED, 7up, Everest etc.) will work in low res but I know there's a tiny (20 KByte) text editor called "Notice" written by Holger Weets (the author of ST-Guide). You can install it as an ACC and if you call it (or if CAB calls it through a VA_START message) it will only open a text window. It doesn't have a menu bar but it has all the standard keyboard shortcuts needed to open/save/close/quit (^O, ^S, ^U, ^Q), cut/copy/paste (^X, ^C, ^V) text.

I totally agree with you on this point! The system clock alteration is
very annoying... more, every time you run (and quit) Oasis, the correct
time is set with +-2 seconds accuracy... if you run it many times you end
with a hem... innaccuracy. :-(

It is not a problem with CAB, I was just using CAB as an example. Any other
software running under MiNTNet seems to have the same problem.

I have actually found that CAB is very stable, it never crashes for me. The
only problems have been this one, which is caused by MiNTNet not CAB.

Thanks anyway.

Dear andre,

Do you know where I can get hold of a version of papyrus Gold 4. I don't
mind if its in German. It's unavailable in the UK. 8(.

Yours

garfield

4052. TT memory

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: dag.dao@p1.dada.ct.se
Message-ID: <ftn_2.200.136.1$fidonet.org_bf083aea_Dag.Dao@p1.dada.ct.se>
Source record: 144071

Well, OK,

I finally laid my hands on the computer of my dreams, ie an Atari TT. It came equipped with 2 Mb ST RAM & 4 Mb TT RAM, & now I'd like to know how to expand the memory even further.

I've heard that it would be possible to install as much as 10 Mb ST RAM, which I find strange, since I believe the ST RAM consists of 2 banks of socketed 256 Kb chips. Could I simply replace these with eg 512 Kb chips, thereby doubling the ST RAM? Or would I have to rely on some plugin board?

And the TT RAM - it's actually 4 regular 30 pin 1 Mb SIMMS on a card with a lot of 3 pin jumpers. Providing that I change some jumpers, could I replace the SIMMS with 4 Mb SIMMS? I suppose they'd have to come in pairs, like on the STe, but OTOH I might already be out in the blue. ;)

Advice is very much appreciated; I've been browsing the web a lot lately for information, but have found zilch on the matter.

-+- Dada!

Are you suggesting that mailbombing is more "grown up" than ignoring
someone who winds you up, then?

Surely not. Mailbombing helps no-one, and hurts innocent people.
Using a kill file makes much more sense. I would put you in mine, but
your unbounded silliness does give me some amusement from time to time.

4055. News with CAB?

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: a2124874@athena.rrz.Uni-Koeln.DE
Message-ID: <4p6ed5$6iu@news.rrz.uni-koeln.de>
Source record: 144074

Hi!

I've notized, that in CAB's new version you can now define a News-Proxy Server. Are there any plans, to adress a news server with CAB in the future? It would be nice, if we could have access to news servers with Stik/CAB like it is already possible with Netscape!

Greetings,
Andreas

4056. Probs with Antmail

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: a2124874@athena.rrz.Uni-Koeln.DE
Message-ID: <4p6en5$6iu@news.rrz.uni-koeln.de>
Source record: 144075

Hello,

I have some ugly problem with Antmail and I hope, that some of you might help me: Whenever I trie to check my mail with verbose listing, after the 10th or 11th mail the checking process is cancelled and Antmail declares "Trouble with listing command" Also, everytime I try to download my mails, after the 6th one, the messages "Trouble with retr. command. Cancelled." appears, and that's the end. I sure would like to get all my mail on my pop-servers, there are 67 so far, and I'd like to get them with Antmail! Any ideas?

Regards,
Andreas

I have it, and I can happily depart with it. It's just one floppy and
a booklet kind of handbook. I would (maybe) still use it, but it won't run
with my Swedish TOS version. It's ok, but SLOW!

> The Piggyback RAM chips could actually be a 2.5 meg machine.
> I have one where they have used this type of installation.

The early Atari's (520 and 1040) have a MMU that can access 2
banks of memory. A bank can be 512k or 2Meg.
Thus you often find a 520 with the drams piggy banked. Basically
differing in the chip select. This gives 512k + 512k = 1 meg.

The 1040 came with 2 banks of 512k making 1 meg.

The more common memory addon of several years ago (such as EZ-RAM)
added 2 meg; but had to disable 512K of the original 1 meg to do it.
Net was 2.5 meg.

4060. Cartridge port extender?

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: des102@unix.york.ac.uk
Message-ID: <4p6ufq$isk@netty.york.ac.uk>
Source record: 144079

Hi,
I've just obtained a Lighthouse Tower case for my ST, which places
the cartridge port on top. Unfortunately, it is to be used with Emagic's
Log 3 and Unitor which hang about 3-4 inchs off the side. Is it possible
to get a short extender for the cartridge port so that I can mount the
above devices securely elsewhere rather than stuck up vertically from the
top of the case.
Cheers,
Dave

Well I've the KGMD basic, compiler and manual packs installed. I still
have slightly less than a good idea what I'm doing. :)

>>I'd like to hook it up to the net if poss, using a dynamic IP.
>You'll need the MiNTnet distribution go get networking running. MiNTOS will
>help as it will allow you to start all the relavent daemons. You don't need
>MiNTOS to run MiNTnet, however.

I think I had that - but it failed to install. :/
I'll grab it again.

>>If anyone can point me towards a "learning mint/unix" doc or give me some
>>e-mail assistance. Please get in touch.
>MiNTOS's look and feel are based upon SunOS/BSD 4.3 style UNIX, so if you
>get a book on those they should give you a good working knowledge.

OK. BTW: any idea why KGMD doesn't have an adduser command, anyone?

Cheers

Yours etc.

David.

> software ?

I've heard of a few people who had problems with the internal IDE drive this was nothing to do with FX, I suspect that you might find a new drive works ok. I found that I got faster transfers with a 3 in. IDE drive.

>Now I thinking of installing a 3.5" IDE HD to my falcon using the 2.5" to 3.5" cable converter
>available from TOAD computers and SYSTEM SOLUTION. My concern is that I would encounter the same above
>meantioned problem - I mean don't I have to reformat the HD to enable it to work under TOS ? Or is the IBM
>formatted HD workable under TOS ?

I used HD Driver to partition my drives, the IBM format is ok.

4069. cab help!

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4p76j6$1g8@madeline.INS.CWRU.Edu>
Source record: 144088

Stik works fine, as e.g. I can run the OLD cab12b or MG-FTP from it.
But I CAN't get the new cab to work right. :-(((
When I run it, the home_e page comes up fine, but I can't get any outside
files. I transferred over my old hotlist. When I try to get my Univ home
page, it gives me an error:
read error in file
'\'
If I try to get the newstand page from another server, I get:
read error in file
'\newstand\magazines.html'
and similarly for other files.
Now, I am not using mint. there should be no *.html!
I have tried using a brand new cache file, no good.
I have tried using the old cache file, no good.
I have copied the old cache into the new cache, no good.
I have freed the cache, no good.
I have put in a 00000001 file, or a 00000001.htm, no good.
I can run the old cab, not the new. What the F**K am I doing wrong.
I copied over the relevant files from 1.31 to 1.30 (backup), no good.
I reinstalled www131 from scratch, no good.
I have a TT 4+4, and nothing changed in it that I know of.
HEEELP!!!!!

Try these:

GRAPHICS:

deskpic2.lzh 12 Display Spectrum pics at boot (used with Desk Manager)
deskpic5.tos 86 Display .GIF pics as desktop backdrop

CPX:
deskpic.zoo 43 CPX - put DEGAS background on your desktop.

You do have a cab.ovl copied in the cab folder? :)
look at the cab info dialoge to see if the cab.ovl has been loaded
properly.
Also check your allocmem statement in your default.cfg file and make
sure its around the 200000 mark.

Nick.

I believe that Wizztronics makes a cartridge extension cable called
CartRight, which should meet your needs. They also make CartMaster, which
is a multi-cart switchbox. You can check with Toad Computers to see what
they have in stock, or call Wizztronics:

Toad Computers - US:
1-800-448-8623
info@toad.net
http://www.toad.net/

Wizztronics:
1-516-473-2507

P.O. Box 122
Port Jefferson, NY
11776

CartRight Cable - $ 35.00
CartRight w/Housing - $ 65.00
Cartmaster (4 Carts) - $199.00
CartmasterLite (2 Carts)- $ 79.00

I saw this on a Commodore 64 and had the same problem. On that, you
had to type commands in such "go to fridge" and "feed dog". The parser
was awful.

I have no idea what the point of the game is. He ran out of food after
a while and just sat in his chair going very green. I certainly
couldn't get him out of the house in any case!

He will also dance to music on the stereo iirc.

Newsgroup: comp.sys.atari.st
Date: 1996-06-06 00:00:00 UTC
From: jdaddin@dfw.dfw.net
Message-ID: <4p7l17$4r7@fnord.dfw.net>
Source record: 144094

I'm having problems too. I'm assured that I do have standard SL/IP connection and I just downloaded and installed v1.31 as well as the newest version of HSMODEM that I could find. It had no effect. I'm still having some problems that others have had with non of the programs working properly except I CAN get finger to work sometimes. STiK connects fine but when I run CAB and type in the URL, it resolves the host and then says 'Receiving Data (Bytes 0)' and never goes further. I continue to try all of the suggestions I see posted here but with no change.

From: Glebestreet
Message-ID: <DsL9ro.7DH@udcf.gla.ac.uk>
Source record: 144096

Why do .ttp programmes sometimes appear to run then whip back to the
desktop?
In fact what does TTP stand for and where can I get some general
documentation about TOS,GEM etc?
I have inherited a few old Atari ST's and Mega ST's ,all with various
versions(old) of TOS and different amounts of RAM etc.
I would like to be able to understand whether strange behaviour is caused
by incompatibilities or bugs.How can I go about getting a decent overview?
All help very welcome.
Steve.

Message look fine in PINE 3.91! Of course it probably only needs
linefeeds and not carriage return and linefeeds! If that's the case then
my post is probably one long line for him also! If he is one of the lucky
people that can get oasis to run right then he can change his font to a
smaller size one to get more of the line on the screen at once, though
this won't help with 254 character lines of course!

Hi,

Rich Tietjens (starship@3rdplanet.com) wrote:
: ha-user@ux-01.bg.bib.de barked in U.COMP.SYS.ATARI.ST on 01 Jun 96:
[this was me, but I think I didn't exactly "bark", did I? ;-)))]
: h>
: h> So is this the right place for announcements now?

: Since there's no traffic in comp.atari.announce, it makes sense to post
: announcements here. Mind you, you'll get flamed back to the Stone Age if
: you post a blatantly commercial message that's not Atari-related.

Nothing is less like the kind of thing I'm going to announce here.

DuetMagiC 0.3 is a small application which, when run under MagiC,
will enable the Duet networking software by Andreas Alich to work with
MagiC. This is achieved by regularly making a BIOS call which Duet
needs and MagiC apparently does not make.

The thing is freeware, and this version is as yet in German, but I've
encluded an English readme. A full English version with reworked
documentation is due early next month (I hope).

ftp server: ftp.tu-clausthal.de
path : pub/atari/misc
file : duetmc03.lzh (Jun 4, 16:19, 17766 bytes)

Everyone is encouraged to spread theis program in any way, esp. by putting
it on other ftp servers. But *please* let me know when you do so,
so that I can see to it that it's easily updated. Next version will be
named duetmc04.lzh.

Thanx
Erik Meltzer

Hey! Don't ever ask it again. Take Cubase and forget Notator.

When we come to the software for better machines, we could MAYBE
discuss about Cubase Audio versus E-Logic. But for the ST .....

This is strictly my opinion !!!

Good luck !!!

I am just writing because I am looking for other Le Redacteur users to come forth, so that we can all benefit from each other questions and answers. I'd like to set up a mini mailing system, or make a list of all users to share with the others.

I currently have v4.02 but I've used 3.15.

On pourrait se parler en francais or english. Mais tout ce qu'il faudrait, c'est que tous les usagers se parlent.

Please write, and maybe we can help each other out.

A bientot,

Joseph

4089. Hurray Cab/Mint works, but...

Newsgroup: comp.sys.atari.st
Date: 1996-06-07 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <834261056_OASIS_@ping.be>
Source record: 143858

I finally managed to get the Cab-Mint-MintNet combination working on
my TT with Crazy Dots 2 card, NVDI 2,5 and the multitasking system
N.AES. Cab seems to work quite happely with this configuration.
BTW I'm using Cab v1.3 with the Cab-for-MintNet-177 overlay.
Although it works very well it seems that there are a few problems.

1)Sometimes I get a great black rectangular across the page. That
happens as well offline as online. Reloading restore the page.

2)Speaking of reloading. When I for instance resize the window
while I'm on line, Cab donwload the page again. I tough this was
a task for the cache or am I seeing this wrong?

3)The color reproduction of local pages is wrong. This problem
doesn't occur when I use Cab v1.2b. Non local pages seems
alright.

Any help that explains or even better solve those problems will be
very appreciated.
CU
Martin

I had those problems too. When they occurs I simply delete the whole
wwwcache folder. After that everything seems ok.
BTW there is a new (?) Cab-for-MintNet overlay. The one I use is
Cab-for-MintNet-117. This one handle forms correct.
Hope this will help

The CDAR504 is a CD-ROM drive from Atari! Kind of on the old side now and showing it's age, but you can hook it to a stereo and play your audio disks with out having to be hooked up to a computer, also it came with a remote and plugged straight into the DMA port on the back of an ST without needing another adapter! On the other hand it's single speed! I haven't tried a Kodak photocd, but I doubt it would work other than single session if that!

Is there a *recent* FAQ for this group? The most current I can find is 1993.
Thanx.

S.

4094. Sorry! No New Magazine

Newsgroup: comp.sys.atari.st
Date: 1996-06-07 00:00:00 UTC
From: tj@godfather.com
Message-ID: <4pa9u8$1gm@news1.emplink.net>
Source record: 143863

I would like to thank all the folks who sent me emails about the interest in a New Atari Magazine. After careful consideration, I have decided to pursue the other magazine I was looking to produce and that is for the Apple Newton PDA line.

I had posted a newsgroup note to both the Atari newgroups and Newton newsgroups and had received good response from both groups in the first week or so. Unfortunetely the Atari email stopped filtering in while the Newton emails have not stopped. Even though the Newton has been only selling for a short time, the interest in this group is GREAT!! To boot, the advertisers on the Newton side are ready for a Newton only magazine and that helps for a small market.

Therefore, the Newton magazine looks like it will happen and if any of you Atarians reading this have Newtons also, or that you wish to venture into a great PDA, then subscribe to the Newton newsgroups to keep posted on this new Newton based magazine.

I will keep abreast of the Atari side and if for some reason the Atarians show a deep want for a new Atari magazine, then I will re-look back into it.

Til then, have fun with the Atari's and hope the Atari market keeps on going and improving.

Hi folks, I can tell you a secret (having BOUGHT this thing for my C64
in some unsatisfying moment about ten years ago):

There is absolutely NO MORE sense in it! The docs and the box are made
up colourful and exciting (which fact should have made me suspicious),
but the point is, you are supposed to watch that little sprite all day
long and give it some orders from time to time just in case you can't
afford a dog to do so.

Wonderful, isn't it?

Have fun!

Since there was no new CAB.OVL in the CAB13.LZH package, it seems
clear that you need to use the previous version. But, can anyone explain
why the new CAB_JPEG.OVL is only 22K when the previous version was 70K???

As a fan of BOLO the tank net game on the mac I'd be willing to sponsor
someone who wants to write an Atari Conversion. It would have to ..

1. Be compatible with existing Mac Bolo players
2. Use Stik
3. Work in Colour and Mono (This may be the sticking point)
4. Be compatible with existing Bolo bot's etc.

Anyone up for the challenge .. Cash prize awaits..

Mail me if your interested.

Yours

Does anyone konw how to get this game to work on an Atari MegaSTE, TOS 2.05 ???

I've tried running it through STOS Fix 3.0, and it doesn't work at all, which is really strange, as STOS Fix has worked for me 996f the time in the past.

It loads up as normal and then goes through the intro and credits and stuff, and ignores any mouse action, joystick movement or fire button pressing, and even the keybaord !! It just won't go to the menu !

If anyone has any idea how to get this game to work... or better still has it fixed to work on a TOS 2.05 machine please get in touch !!!

Or if you've got a copy of Dyna blaster you are willing to sell cheaply at about 5UK pounds, do get in touch...

Thanks

JDK> exposing my monitor to damage.

Hi David,
Since you have an "energy star" monitor, you don't need to worry.
The only monitors that could be damaged when loosing one or more syncs (which is what TurboBlanker does) are old VGA monitors...
I use TurboBlanker with my Samsung 17GLsi (which also is an "energy star" monitor) and I've registered it - it's definitely worth the money! It even works with Cubase Audio, speeding up the waveform calculation a great deal if you activate TB.

Best regards,

Claes

JN> doesn't push very much air at all! And, it is very loud!!
JN> Why not just disconnect it as some others have mentioned that
JN> they have done!

Hi John,
The fan is there to cool the power supply.
I haven't tested, but I guess that you might run into problems if you have a HD or a graphics card in the Mega STe. The heat will probably go too high when you draw more current from the PSU.
Since you've heard others have disconnected the fan, I guess it works as long as you don't use any extra equipment...

Best regards,

Claes

Make that "...modern _European_ TVs" and I'll agree. Sets made for the NTSC
(e.g., USA) standard don't handle a wide range of frequencies.

If you feel it would facilitate a little education, I can send copies of every post he has come up with in the past 2 weeks.

SinClap is an "irregular regular" in the group. He pops in, starts a flame war, then disappears after a little while and lays low for months at a stretch. His behavior is annoying in the extreme for brief periods - much like a cloud of wasps, but without any need on the part of the usual gang to irritate _him_.

I'll post a copy of this in comp.sys.atari.st so everyone can see that you have replied, and so they may add their own coments if they are so moved.

Tos Takes Parameters - in other words, it requires a command line. TOS is "The Operating System," which is any program that doesn't require the GEM interface (you should be able to rename .TOS proggies to .PRG and they should still work properly). As for general info about TOS and GEM - how deep do you want to go?

> I have inherited a few old Atari ST's and Mega ST's ,all with various
> versions(old) of TOS and different amounts of RAM etc.
> I would like to be able to understand whether strange behaviour is caused
> by incompatibilities or bugs.How can I go about getting a decent overview?

We could list known bugs (and the _FREE_ fixes that exist for them) for each version of TOS. Incompatabilities are a different story - it depends on the individual program. There are a very few that run properly only on TOS 1.0, for example. Most will run quite happily on any version of TOS.

Fifty bucks is normal (although a silly thing to buy) for MS-DOS, but PC
Ditto is nothing but a curiosity these days. Top value for it might be $10.
Surely you can find a used copy for that much.

rbmier@winternet.com barked in U.COMP.SYS.ATARI.ST on 06 Jun 96:

>> Will the software
>> that comes with the link II allow me to repartition the internal drive,
>> even with the Atari host adapter?
>>
r> No.

One-half off for points, Rich. As long as an ICD host adapter is connected to the DMA port, ICD's utils will treat the internal drive like all of the others.

r> First, I don't think there is a replacement for the internal Atari
r> SCSI host adaptor for the MEGA STE.

I know it can be replaced with the ICD Mini (although you have to rewire the plug, which is a PITA). I read here that there's a direct replacement available in Germnay, but AFAIK that's still rumour.

r> Second, the Software you need to be able to use it on the Atari
r> and any other host adaptor is the ICD PRO Software. This is NOT
r> the same as comes with the ICD Host Adaptors. Available for $50 from ICD,
r> TOAD and other Mail Order Atari dealers.

That much is correct, /if/ an ICD (including either model of Link) is /not/ connected.

r> Seeing as how you don't need a Real Time Clock, get the LINK II
r> for the external SCSI Drive but use the ICD PRO software.

I would advise the ICD Pro also, but not because it's required. The Link version of the software WILL work, and as long as the Link is connected, the internal drive will be just like any other drive to the ICD utils.

However, ICD Pro includes CleanUp ST, which used to sell for $30 by itself. It's well worth the extra $20 for the peace of mind - and the ability to ignore the brand name on the host adapter.

h> PD ICD utilities from v6.2.3 onwards you'll be ok. Is ICD's BBS still
h> online or do they have an official FTP site? Otherwise you'll have to
h> mail them.

Sid, there are not now nor ever were any /PD/ ICD utilities. The only people
who have a legal right to download ICD's utils are people who purchased ICD
hardware and want to update their software. Any version which purports to be
PD is, flatly, stolen.

ICD is still in business, still supports their software and hardware (albeit
not enthusiatically), and most important, still own the international
copyrights to ICD utilities. They supported us for many years with fine
software and hardware. It is to be hoped that some form of gratitude and
honesty still lives in Atari users, who will not pirate the software of one
of our most reliable suppliers.

Use your keypad. There are some actions you can influence his life with. You can order him pizza, supply dog food, ring the phone while he is in the shower :-), and some other things I don't remember.

The object of the game is to sit and watch him live his life.

I personally had the most fun when I first saw his face go green (ST medium resolution desktop background green, not a greenish shade of normal face color) as I forgot to order pizza for a very long time. [That was more than ten years ago, we had that program run as an eye-catcher on a Demo Commodore 64 back then ...]

Cab 1.30(beta) is under test right now. I'm not sure about the current statuses of AntMail or STiK right now. The CAB-for-mintnet overlay is on hold for a couple weeks, while I nail down some coding problems at work, and then I'll get back in and tinker some more with ftp and email support.

Source record: 143922

This last weekend my system got hit by a power surge, while the surge bar kept most of everything safe, my Supra 44 meg removable [SyQuest] drive's host blew. I'm now dead in the water and I have a lot of text that needs editing. After paying my Mothers Doctor bill, I've been left with not much money to get another host card. If anyone has an old supra host OR an ICD Host that's just collecting dust, if you'll send it to me, I'll pay for it on the 1st of July. Please contact me via e-mail. starlord@muskrat.com

4130. Music/graphics program

Newsgroup: comp.sys.atari.st
Date: 1996-06-07 00:00:00 UTC
From: Keefy <fkeith@cs.strath.ac.uk>
Message-ID: <31B7F45D.167E@cs.strath.ac.uk>
Source record: 143924
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

Has anyone written a program, similar to that on the Sony Playstation
music/graphics thingy? I know it would not have the 3D effects etc,
but anything is better than nothing.

I once wrote a STOS program which strobed the screen with the music,
reading from my Stereo Master sampler, but, as it was STOS, it was
not very good. Ideally, I would like something that only reacted to
the bass of the music.

I would have liked to write the STOS program in assembler, but I know
sod all about the ST's screen addresses and how to clear the screen etc,
although I can use assembler but don't have one for my STE.

Please e-mail any replys as I am on my Uni vacation just now and don't
have much time for checking Usenet (it's a Uni account), and I will
miss any postings (probably).

Thanks in advance,

Fraser.

Ermm... Cab 1.3 has been released as part of the www131 package and
seperately. Antmail 0.7.8 has just been released on a.a.u.e and stik
is still at 1.08... but is still under development. Im sure you know
best about cab-for-mintnet though :)

Well It used to but some people's machines didn't like something in
the way it was finding the path or something which made the setup
program crash...

>It does ALMOST everything else????
>NOWHER is there a warning that I could find.!!!!

Yep I seem to have written about setup not installing the cab resource
files but not about the cab.ovl file..... sorry :)

Interesting.What is the source of this info?
We have a 520STE,4 Megs,tos 1.06,gemdos 0.15 running Cubase Score 2.0r6
and also a Mega ST4,TOS 1.02,gemdos 0.13 running Cubase V3.02.
Which would best explain trouble transfering .all files from the 520 to
the Mega?Different TOS versions,different Gemdos versions or a combination
of the two?
(Why did my predecessor ignore this for so long? ;))

No, it will go commercial... and you will probably have to pay around
300SEK, and for that you will receive around 10 HD disks (yes, the game
will be biiig!), manual, and a great game of course! 8-)

: d> Yes, I heard about Tommy, he wants 50 SEK for the new version of
: d> FAST-Boot, and he's really worth it, I'm using FAST-Boot every day. 8-)

: Me too. The new v0.9 is very, very good.

v0.9? Get v1.0, it's out now, and you will be able to register FB at NAS.

Thing never seems to work properly on my TT, so what I am about to
suggest may not help (much)

Have you used the control panel to redefine snot-green into a different
colour? Save the desktop (from Atari's GEM Desktop). This will create a
NEWDESK.INF file, into which your new palette will be saved. (I forget
which line it is in, however)

Next time you boot, the new colour scheme will hopefully take effect.

Even I'm not going to disagree with you here. Awful as STOS is for most
of the purposes people put it to, I have to say this is one application
where STOS is ideal. Apart from the crap editor that is.

Then your intentions and your postings don't seem to be on the same
line, to say "as it was stos, it was not very good" is a criticism of
the programming language, your intentions may have been different, but
what I read, is what I saw, is what I responded to :)

STOS can be criticised for many things, it is not the greatest of
languages by any means, but if someone wants to say such, then they
should have tried it to its limits then said its not up to it,

>Also, it's not that I "could not do it", I did! I just wanted it to be
>better, and as I don't know much about good ways to convert an audio
>signal to a moving patern etc, I thought I would ask to see if anyone had
>done something similar. Do YOU know how to do it? Real time sound analysis

I do not, and never gave the impresion I could, my point and whole
posting was based on your sweeping statement re stos,

>is the the subject of degrees and is (probably) not easy, and STOS as an
>interpreter would probably not be any good (unless there is an extension
>for this).
>
> > >I would have liked to write the STOS program in assembler, but I know

>> everyone know it is.
>
>No I didn't. In no way did I say that STOS "isn't up to the job", it

c'mon! thats exactly what you implied, you may not it would now seem
have meant that, but I doubt anyone reading it would have read it any
different?,

>can be very powerful when utilised fully, but all I want is a simple,
>fast as possible program. Assembly seems the best choice for this.
>

>And what happened to a little courtesy? Most browsers have a button
>to send as mail and news, so is it too much to ask that you press
>that one instead?
>
I did, I sent the posting as mail and news, I could not see any
reason not to include the posting in the newsgroup, it is a harmless
debate after all ?

You have missed the point of my posting,

1) hopefully the smileys and the lack of any animosoty or swearing
or nastyness or anything showed that this wasent exactly meant as a
personal attack, hence the public posting :)

But let me explain why I responded?

2) I use STOS (you guessed that already?), and I find there is very
little it cannot do, I am the keeper of the FAQ and have written
various articles on the subject for everything from diskmags to
national magazines (with the use of a spell checker),

For many good reasons, people have an instant opinion of STOS and
believe it to be totally useless, this is brought upon in no small
part by people telling everyone it's ....useless, Your posting DID
make it look like you where blaming stos, you havent the extensions,
upgrades or even the compiler it now seems, to have enough experience
or knowledge to make this claim, sorry to labour the point, but you
cannot simply say "as it was stos it was not very good", you are
helping get the language a bad name by making such unfounded
statements,

After all, what is "comp.sys.atari.programmer" for, if not to debate
such point's?

Cheers.............!ynoT

> would have managed it, STOS is not only capable of such a task but
> with the new updates and added commands then it is ideal,
> Just because you could not do it, that does not mean that STOS was
> not capable,

I wasn't criticising STOS as such. I don't have the compiler, so the
load up time was about 2 minutes for a program that would probably take
30 lines of assembeler, and no matter how good STOS may be, assembly
will always be faster than an interpreter based language (unless you
have the compiler, which would have to be very efficient).

Also, it's not that I "could not do it", I did! I just wanted it to be
better, and as I don't know much about good ways to convert an audio
signal to a moving patern etc, I thought I would ask to see if anyone had
done something similar. Do YOU know how to do it? Real time sound analysis
is the the subject of degrees and is (probably) not easy, and STOS as an
interpreter would probably not be any good (unless there is an extension
for this).

> >I would have liked to write the STOS program in assembler, but I know

I meant clear the screen using assembly language. I thought that was
obvious in the question.

> >although I can use assembler but don't have one for my STE.
> >
> You have an STe...for crying out loud!, STOS is exactly what you
> want, DMA? no problemo, even more commands if you have a Falcon

What use is DMA in this application? Please tell me so I can use it.
I don't even think I have the extensions anyway. (looking at the last
sample player routine I used, it was the one you get with the sampler
package, so I probably don't have them). I never use STOS anymore anyway,

because my brain is already fried with languages such as assembely, C++,
scheme, eiffel, etc.

> >Please e-mail any replys as I am on my Uni vacation just now and don't

No I didn't. In no way did I say that STOS "isn't up to the job", it
can be very powerful when utilised fully, but all I want is a simple,
fast as possible program. Assembly seems the best choice for this.

And what happened to a little courtesy? Most browsers have a button
to send as mail and news, so is it too much to ask that you press
that one instead?

> >Thanks in advance,

Source record: 143954

Is there anyone out there who cannot live without an Atari Desktop Publishing System? If so, you have read the right posting! I have one I NEED I am a college student, and my mom is getting a little cranky having it at home. Anyway, it is an Atari MEGA ST4... 4 megs of RAM, an Atari SLM804 laser printer (300 dpi), color (still under waranty) Magnovox Monitor, and extended keyboard. I have Pagestream and Word Up programs for it. If you are interested, PLEASE e-mail me at eilersdj@bvu.edu. I am open to any offers... just want to get it out of the house.

Thanks!
Debbie Eilers

4161. Oasis, NOS and kill files

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <1989008368_OASIS_@phil4.demon.co.uk>
Source record: 143805

AFAIR NOS doesn't support Kill Files (causes some sort of crash ?) and
so news cannot be 'filtered' when using these programs.

I was tempted to write some sort of program to edit the batch.txt file
after news has been downloaded to filter out articles containing
certian words (currently including: Peter Sinclair-Day, Make Money
etc. etc.)

However before I bother, I thought I'd ask if anyone has already
written such a program, and if so could they let me have a copy ???

ATb.

4162. CoSTa 1.41 now available

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <7069092_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 143806
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of CoSTa (1.41) is now available on ftp.cnam.fr in pub/Atari/incoming/. The file is called costa141.zip

CoSTa logs calls made by NOS, CixComm, MiNTnet, CoNnect2, and ICE. It then calculates the cost of each call and presents you with a running total of your current internet phone bill usage.

The main difference between 1.41 and 1.40 is that it now takes into account any system clock changes made by ICE. This is very important if you have ICE set to change the system clock!!

Gary.

4164. Specialists Wanted!!!

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: Tom Holder <Tom@resmon.demon.co.uk>
Message-ID: <S8Ns2nBBnWuxEwNf@resmon.demon.co.uk>
Source record: 143808

THIS IS A NON PROFIT MAKING VENTURE. PLEASE READ ON...

This message is NOT an advert and I'm NOT selling anything. I just want
to bring a new service to the internet that will help people. It has
been posted to lots of newsgroups but this is necessary for it to
work.
This will be a 100% FREE service, no one pays anything!
Thank you to those people who have already showed interest in the idea.
If you disagree with the idea that's fine, but I have had a lot of
people saying that it is a good idea so please do not respond unless
your
interested.

The IDEA,

I'm collecting the names and e-mail addresses of people who feel they
have a good knowledge and interest in a particuler subject/interest.
I am going to publish the whole list onto the www, it will be
called HelpBase.
These people must have a good knowledge of their specialist subject and
must be willing to take questions from people on their subject area.
The subject can be anything from 'computer programming' to 'Tia-chi'!
The database will be open to anyone and everyone and each person will be
entered under their subject area with a e-mail link and a web page link
if you have one.

The only thing that you will get out of this is satisfaction of knowing
you have helped people, with out the support the service will not be
able to run.
If you have a web page I will put a link to it for you, this will
provide a bit of free advertising for you but you must still be willing
to help the people that mail you.

If you start getting flooded by e-mails you can mail me and I will take
you off the database or find more people with your specialist subject to
take the pressure off.

If you are interested please complete this return form.

Name (Last First) :

E-mail address(s) :

Webpage(s) URL (optional) :

Special subject(s) :

Description of what you cover in your subject area :

I fully realise that this is the idea of newsgroups but from past experience, you get a lot of people joining in not knowing what they're really talking about and lots of people have nothing better to do than shout abuse at people.

Thank you for your support.

Tom Holder
Tom@resmon.demon.co.uk

ST Ram is 16-bit, so you can have two banks of 2-Mbytes each (one on the motherboard, and one on the ST Ram card. To get to 10Mbytes of ST Ram, one needs to junk the ram card and buy a (rare!) 8 Mbyte ST Ram card.

It is up to you as to whether you want to go from the two megs you have to either 4 or 10Mbytes of ST RAM.

My TT had 4Mbytes (4 ST Ram, 0 TT) when I bought it second hand, and I personally found 4 fairly restrictive until I bought a TT-Ram upgrade from System Solutions.

> And the TT RAM - it's actually 4 regular 30 pin 1 Mb SIMMS on a card with a lot
> of 3 pin jumpers. Providing that I change some jumpers, could I replace the
> SIMMS with 4 Mb SIMMS? I suppose they'd have to come in pairs, like on the STe,
> but OTOH I might already be out in the blue. ;)

TT Ram is 32-bit, so you must replace the SIMMs in lots of four. (I have a third party TT Ram card, so I'm unable to comment on Ataris TT Ram card)

The real question is: Just what do you do with your computer - how ram-intensive is it? If you need lots of sound/screen data, go for an ST ram upgrade. If you handle lots of data processing, go for a TT Ram upgrade.

A Newton is a PDA (Personal Digital Assistant) from Apple. Its a handheld
device that allows you to keep track of addresses, take notes, do simple
drawings, etc.

You should get in touch with Sinclap; he seems to favour Newton over Atari.

What address does Danny test it from? I can't remember, is it his
cix account? I think he's got a demon account though hasn't he?

>faltrion@mail.kd.qd.se
>frank@support.tachyon.co.uk

I don't know what address Frank tests it from, but that address is a
netkonect one, which is PPP only so he doesn't run SLIP from it. He
also has a demon account and I guess that is what he uses STiK from.

I may be doubting your figures, but I have to agree with you overall,
there are plenty of non-demon users, including developers of most of
the system, who don't have problems.

Far from being biased towards demon users, infact, demon users are at
a disadvantage because they can't run antmail.

Which dialogue? I've CAB 1.3 installed and I'd like to check exactly
that before I connect to my ISP.

CAB 1.3 doesn't need STiK enabled to look again at local pages,
previously loaded from the net. That's better, it was really confusing
in older CAB versions.

Nobody at demon make software for stik apart from Tim Putman who's
doing FracIRC :)

>Far from being biased towards demon users, infact, demon users are at
>a disadvantage because they can't run antmail.

Yep but dan has a list of testers apart from the main list for
antmail.. so it doesn't get tested less than the other programs..
Eventually Demon users will be able to use antmail once the smtpd
program is finished.

>very much air at all! And, it is very loud!! Why not just disconnect
>it as some others have mentioned that they have done!
>
I guess it cools the inside of the computer... chips heat up, thats
why some have heat sinks. If there isn't enough air movemuent both
these and the chips will heat up.

From what I can tell the vents on the top of the MegaSTE are quite
inefficient at getting rid of heat, especially if you have a monitor
ion top, and an internal harddisk, there isn't very much air getting
out there.

If you are considering leaving your MegaSTE on without the fan, then
its a good idea to make sure its not on for too long, and that you are
in a cool place.

You are most likely to find when it overheats, things stop working
(like printer etc.) as chips pack in. I'm not sure if this damage is
permenant though (wouldn't like to take the risk.)

Whilst I can't help with your query I can offer some advise re using Log3 in a tower case. I have been advised by Emagic that some Log3 units wont work in a tower case as the connections become too long. This results in the Log3 not being recognized. These units are more than a little sensitive under normal circumstances so I suggest you approach this project with care.!!!

4178. TurboBlanker & monitor damage

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: jklimch@larry.cc.emory.edu
Message-ID: <4pcvn8$31n@larry.cc.emory.edu>
Source record: 143822

Thanks for your responses on tblanker. Armed with assurances that it won't blow up my monitor I tried the software for the 1st time today. I ran it as a program (in single tasking mode) just to see it at work. I set the start up delay to 10 seconds, used both horizontal & vertical synch, set the interrupts as mouse & keyboard & let it rip. It seemed to work. The screen went blank & the power saver light on the Sony activated. The only problem was when I brought it out of sleep mode with a mouse click, my screen was moved 20% or so to the left. I could only get the right screen back by rebooting (which kinda takes the fun out of screen saving though it might still be worth it to get the speed increases in Cubase sometimes). Any ideas or workarounds?

Klimchak

4179. TOS 2.06 Rom Image.

Hello,

First, please excuse this anonymous post. My school doesn't support Usenet.

Second, I know this is unethical but I really need a TOS 2.06 ROM Image
as I am trying to run STonX for linux. I have a 1040 STf of my own but
the TOS is 1.0 and will not work with STonX (as far as I'm told) :(So, If
anyone can find it with-in their capabilities to e-mail me a uuencode TOS
2.06 rom Image I will willing to offer any thing I have in return.

Thank You :)

I tried it too.
And Futurenet registration came up with the same old errors,....

4181. WWW131 (IRC): HD-Crash

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: andy@urban.prima.ruhr.de
Message-ID: <GFIVBGAMUP@urban.prima.ruhr.de>
Source record: 143825

Three days ago I got the new STiK/CAB-package. First of all I tried the new IRC-version and played a little bit with function-keys and /ctcp-stuff. I was quite happy with the new IRC-features.

After that I returned to my desktop, disabled STiK an tried to run UPOINT to get my mail and news. But after starting UPOINT via function-key F9 the screen flashed, for about 3 sec. it seemed to start UPOINT but then returned to the desktop. This happend several times. So I tried a UPOINT-version I backed up to another partition: that worked.

A few tries later a realized that the whole partition (150 MB) with my original UPOINT on (and all the other Internet-stuff) was totally out of order. I couldn't start any of the programs on there. I couldn't even read any text-files from that partition. I allways got the message: "Unknown data-type".

When I had a closer look at the partition - by accident - I noticed one very strange folder and one very strange file in my "temp"-directory of UPOINT. Unfortunately I didn't write the names down ... - the folder has had an unusual disk-icon in front of the foldername - I can't remember the name but it was very long and has had something with "ctcp" in it. The file was called something like "./script" without any extension.

Both of these files couldn't be deleted and lots of other files on this partition couldn't be deleted, too. I helped myself by copying all of the files to another partition. About 5% of these files were unreadable and couldn't be copied but appart from "upoint.prg" and "upinst.prg" no important data had been infected, only some not very important text-files and some files from the WWW-Cache. So after about 4 hours of work I was happy having rescued at least 95% of my datas of that partition. I formated the infected partition and copied everything back. And now it does work again.

If anybody is able to explain what happened with my HD-partition I would be very interested in that. I do very much suspect that playing with the IRC-ctcp-commands caused the problem, but I'm not sure. I might try the whole thing again on an empty partition to see if the strange files appear again. But honestly: I`m a bit afraid to loose important data cause there's no guaranty that other partitions will not be infected.

BTW: I'm using a Mega STE 4.

a002692t@bcfreenet.seflin.lib.fl.us barked in U.COMP.SYS.ATARI.ST on 07 Jun 96:

a> Author: Barry Spatz Address: a002692t@bcfreenet.seflin.lib.fl.us
a>
a> I have a 520ST, and I just got the monitor for it. I connected
a> everything, and the computer seems to work fine. However, when I turn
a> it on, the "Connect and power up disk drive and click ok..." screen
a> comes up. I do this, but it has no effect. The disk drive is connected up,

Bad news, my friend. If you get that screen, then you don't have TOS in ROM. It's looking for a TOS disk (TOS 0.9 AAMOF). Open the case and remove the top shield and you should see either 2 or 6 ROM sockets, which are current holding either nothing at all, or a simple boot-from-disk ROM.

You have some options:

(1) Try to locate a TOS boot disk (poor choice, it will eat part of your RMA and you have little in that 520 - only 512k).

(2) Beg for or buy TOS 1.x (preferably 1.4/1.04 - they're the same) in ROM.

(3) Get a TOS upgrade get from one of the retailers and install TOS 2.06 -this would be my option of choice, but I don't play games; some games choke on TOS 2.x and later.

Good luck!

4187. UUCP-ST Development Status Report

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <550004051.34880.22.starship@3rdplanet.com>
Source record: 143831

(From A.ATARI.TELECOM)

The gateway software now has only one major element to be developed, and that is the newsgroup-to-Fido-echo message importer. News_Out is now running here. See below for more details.

On a related note, I recently discovered that NOS supports a Kill list - this has allowed me to limit the size of messages received (I serously doubt we'll ever see a a message over 500 lines in comp.sys.atari.st) and reject messages from known spammers; NOS now gets message headers first, and only gets the body if the message is either in the "Keep" lines of the Kill list, or doesn't match any of the kill lines. I also increased my NOS buffers from the default of 40 to 64 and have seen a dramatic increase in throughput. Speed went from a maximum on some messages of around 3800 bytes per second to over 11200 bytes per second! During the past 24 hours, I have gotten more than 8 megabytes of Usenet news without tying up the modem unduly.

-!- JetMail 0.99beta21
! Origin: STarship & Quarks's Holosuites (51:205/311)

I would judge that a full release of version 1.0 should hit the streets before July. I'm working on News_In now, the last actual news/mail part of the package.

UUCP-ST - To Do List
====================

(In order of current priorities)

- Finish the News_In program (75- Add an Archie server to Email_In
- Modify Email_In to handle attached files
- Fix the CC: and BCC: problem in EmailOut (if it's really a problem)
- Add logging to EmailOut (partly completed)
- Add gopher/archie filters to EmailOut to block routed files
- Write the User Editor
- Write the Key Generator (can't unlock the programs yet!)
- Write the News Manager
- Write the Setup Editor/Installer Program
- Modify AgeHistory to work with either a number of lines or file size setting (currently is #/lines only)
- Change all news/mail programs to a faster method of reading input files (this will also compensate for excessively long lines posted by some newsreader programs)

Gated by UUCP-ST news_out version 0.99.3 04 Jun 1996
At the 51:205/311.0 gateway

4190. Disk drive won't work?!!?!?

Newsgroup: comp.sys.atari.st
Date: 1996-06-08 00:00:00 UTC
From: a002692t@bcfreenet.seflin.lib.fl.us
Message-ID: <4pap04$gi7@nntp.seflin.lib.fl.us>
Source record: 143897

I have a 520ST, and I just got the monitor for it. I connected everything, and the computer seems to work fine. However, when I turn it on, the "Connect and power up disk drive and click ok..." screen comes up. I do this, but it has no effect. The disk drive is connected up, it is powered, but all the computer doss is keep bringing up that screen. I took the drive apart, and noticed that all when it is powered and connected to the computer, the drive keeps spinning constantly. I also noticed that the disk drive inside is a standard PC drive (does this mean it will read PC disks), so I hooked the drive up to an XT, and it works perfectly. I then took the 3.5 drive from the XT and hooked it up to the ST. Same problem. Only now, the drive only spins when I put a disk in it. I really want to be able to use the ST, and want to know if this is a common problam and how it can be fixed. Thanks a lot.

BTW, the ST has better graphics than any computer from it's time I have (I have about 20, including an Amiga, and just from that opening screen, I can see already that it's better than an Amiga)

>the guy move? And what the object of the game is?

If my memory serves me well, I don't think LCP was actually a game. (In
that games usually have a point)

Little Computer People was something that was just supposed to be entertaining
to watch. The computer people were supposed to run around and do things, and
generally act like real people.

I've never actually used this program, so I don't know how to get things
moving. But I do remember that it sold very well, especially on the C64,
and it got good reviews, so it's probably entertaining.

Disk drives are storred as image file on the PC drive. To read a
floppy disk stick it in and at the cofig program scan in the disk (use
the Leesen option under the floppys).

Running gembench shows the program to emulate about as fast as a TT on
a P120, but the screen update seems to be very slow (perhaps 6fps !)
even though the processing power is much higer... i think this might
be a demo limitation though.

If you have Magx english version... you can replace the version
supplied with your own, in english.

CD-ROM software in order of preference, extendospro, extendos, metados. metados the oldy from Atari will work, but it is quirky to use! If I remember rightly you have to reboot if change from an iso-9960 (or whatever it is) to a high-seirra formatted CD! Been a long time since I used it, also I think you have a different drive Icon for each type of formatted CD's and if you click on the wrong one KABOOM! I've been using Extendos Pro for a while now and can recommend it highly, especially since I got a toshiba 4x CD-ROM drive, now I can record direct to disk almost like the Falcon users!

Hi there all!

This "Receive data (0 bytes)" problem seems to be becoming more and more common. It's my problem, too. I have an idea: What if we all exchanged e-mail addresses (those of us with this problem) and try to work it out together? We can exchange ideas we have, ideas that other people have had, things we've tried, and eventually, one of us is going to come up with a solution and then we'll all be much happier. Any takers? Here's my e-mail address:

daymon@valleynet.com

So I hope to be hearing from you all very soon and we can get this thing taken care of and get ourselves on the web just that much faster! See you all later!

Mike Freeman
daymon@valleynet.com

I'm considering a collection of Sinclap's postings, and perhaps some other distracting threads of recent net history, such as Make Me Happy: Nibble My Tits, as examples of netiquette no-no's. One way of combatting the Sinc, and other such idiots, is with humour at their expense. So if you have a collection of his postings, I would appreciate a copy of it. We'll publish it, get rich, buy Ataris for ourselves and all our friends, set up our own network, develop software that will accurately disrupt only the guilty parties' computers, or do something else amusing.

That's the one. The original release had more bugs than the proverbial tramp's hammock, and the fixed version was unleashed on the world in a blaze of silence. I drew the bugs to Dino Dini's attention at the time, but he insisted it worked okay for him and must only have realised there was something horribly wrong with his game when ST Format gave it 39%. They never reviewed the fixed version (which still doesn't work on TOS 2.06 because of Virgin's copy protection) - maybe they should, as there's little else for them to review these days.

I reckon Goal! is the best of the ST footy games by far. The only reason I don't play it any more is because I've got the PC and Sega Megadrive versions too. If you liked Kick Off 2, you'll love Goal!. (And if you've got the bugged version, Virgin will replace it for you.)

4204. Wanted - Mega Check II demo

Newsgroup: comp.sys.atari.st
Date: 1996-06-09 00:00:00 UTC
From: tommy@sun.pris.bc.ca
Message-ID: <4pfk66$r32@scipio.cyberstore.ca>
Source record: 143661

If anyone has the demo version of Mega Check II, could they possibly email it to me or post it somewhere on the net? It's called MC20.lzh on Genie.

Thanks for any help.

Tom

For my weekly column of straight talk and humor, check out my homepage at: www.pris.bc.ca/tommy

4205. New Stik/Cab error???

Newsgroup: comp.sys.atari.st
Date: 1996-06-09 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4pfl16$s4k@madeline.INS.CWRU.Edu>
Source record: 143662

Just came up with a new error that seems repeatable, at least on my TT.
Try getting http://www.surplusdirect.com
For me it dies after getting a half page loaded with:
Runtine error 163 @$FFF91632
It did it three times in a row, with rebooting each time.
Not necessarily an important page, but an error is an error.

Unfortunatly not, I got it from the programmer himself, but I'll up it to
ftp.uni-kl.de right away.

A Newton is handheld Personal digital Assistant with its own OS. Data is
entered by a stylus and the newton hand writing recognition will recognize your
writing style. Can keep notes, records such as names and addresses, e-mail
capabilities with AOL and compuserve client software. Comes with
pocketquicken. The Newton can be hooked up to Mac/PC to download newton
software and upload quicken data.

Modem and memory cards can be installed. Many newton users have replaced
their laptops because of the newton.

4214. SinClap's response

Newsgroup: comp.sys.atari.st
Date: 1996-06-09 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <550091456.13727.13.starship@3rdplanet.com>
Source record: 143671

SinClap did send this in email - however, I would like to make one last comment public /here/, where all the silliness started. Future discussion will be moved to some other venue. Perhaps I'll bot-move all his postings to comp.sys.pc.advocacy...

I'm slightly censoring this copy, as this forum may be perused by those who are offended by certain words. I don't want to offend anyone /unintentionally/.

S> He has better things to do than to answer losers like you.. I have not
S> caused any behavior to warrant action loser!

Ah, an aspiring Jim Carey, I see.

S> I suggest you grow up and stop being a BABY!

If I came into your house (simply because you had left the door open and the "welcome" mat out) and p***ed on your furniture, you'd be a little annoyed, I imagine.

If I come into your "public" library and start loudly proclaiming that the "other" library across town is MUCH better, I know d**n well you'll be annoyed.

Your sysadmin obviously doens't give a s**t what you do. Fine. I'll follow up through InterNic, find the Administration's address (US Snail mail, so you can't suck up to the sysadmin and get it intercepted) and forward a COMPLETE printed copy of all your annoying posts to them, if that's what it takes.

And if you think that's childish - well, too f***ing bad. Your opinion is of no interest to me, and since you have already demonstrated a total lack of respect for Netiquette and common courtesy in general, you can go p*** up a rope for all I care. _I_ tried handling this in the "proper" way and your SysAdmin has said he doesn't care what you do, so now we're going to have to call on the world-wide Internet community and your uni administation to make him care. I assume his job does mean something to him.

Oh, and be advised that ANY future email to me will be posted in a public forum - you may consider it public. According to the Electronic Communications and Privacy Act of 1986, I have to right to publicly disclose any mail addressed to me or sent by me.

N.B. for all Atarians - I don't make a habit of publicly disclosing email -but this concerns all of us. I'd keep it private it had started privately.

I'll keep that in mind in future. Too late for the last one, sorry.

Oh, and be advised that ANY future email to me may be posted in a public forum - you may consider it public. According to the Electronic Communications and Privacy Act of 1986, I have to right to publicly disclose any mail addressed to me or sent by me.

Your actions so far indicate that you have no interest in the violations of Netiquette by SinClap. That's your decision. However, I suggest that you might want to consider how his actions make the entire domain appear. His postings are inappropriate for the non-advocacy groups where he continues to appear, and your lack of interest in correcting him makes it plain that uni.edu tacitly condones the instigation of flame wars. If this is not correct, I would be interested in your interpretation of your position.

p> Disk drives are storred as image file on the PC drive. To read a
p> floppy disk stick it in and at the cofig program scan in the disk (use
p> the Leesen option under the floppys).

I perused the German docs and I don't think I can read anything but the C:
image supplied with the demo. I know for sure I can't read the D: or E:
drives.

p> Running gembench shows the program to emulate about as fast as a TT on
p> a P120, but the screen update seems to be very slow (perhaps 6fps !)
p> even though the processing power is much higer... i think this might
p> be a demo limitation though.

I did find a way to increase screen updates to whatever I wanted - but as
usual there is a trade-off between processing speed and screen updates. If I
set the screen updates to 15fps, the processing speed was acceptable but the
display was unusable because the mouse jumped all over the palcewith the
slightest movement unless I moved it so slowly that it was unbearable.
Setting screen updates to 72fps was impressive for the display, but the
processing speed was about like PC-Ditto (roughly a 1- or 2-MHz 8088, incase
anyone wonders).

p> If you have Magx english version... you can replace the version
p> supplied with your own, in english.

Ehrm... If I had the English version, why would I be running the German demo?

Try pressing various keys to make things happen - if he's in his chair, "T"
is to tickle him. You need to get food for him ("F" perhaps?) and keep his
water cooler full also. Dog food may be a seperate key. You can play music
and tell him to watch TV or play with the computer, too (he has his own -look
close!).

I wish I still had a system to play that on... Nowadays all my game-playing
is on the wife's 486; this machine is for communications and development.

>Any comments, good / bad / indifferent?

They have a wide range of stuff, both hardware and software. They do know what they are on about, but they are very expensive, especially for repairs/modifications. And the manuals they supply with some of their hardware are nothing short of disgraceful. However, their software manuals, especially for newer stuff like HD Driver, Extendos etc is very good.

I've bought quite a lot of stuff from them in the past three months, but the CD player had to go back once due to an assembly fault. I have now since discovered that one of the audio out sockets is not working! So it will have to go back again :-)

>They are Atari dealers I believe.

And also Mac dealers.

>

Try hitting the escape key. CAB locks up on a very large number of JPEGs. This is a repeatable problem, it always stops at the same character in any given image. For some images, it halts after reading zero bytes.

You can tell this is happening if your modem indicates that it is trying to receive data; after two or three attempts with no acknowledgement from your modem, the sender stops trying and you just sit there. Apparently STiK thinks it has read the complete file, but CAB knows better.

Ask your provider if the page has a background JPEG. Some, for example NETCOM Canada do.

Turning images off may help, I don't know.

Just use the Yellow Pages in OASIS. Capture the name you want to kill
and use either the Kill or Ignore option. It's all in the docs.

You obvioulsy have a 520ST without its operating system TOS in ROM chips. The complaint about the drive not being ready comes from the boot loader - a colorful screen waiting for an "ST TOS System Disk" (not Language Disk) to be inserted.
Either get yourself such a disk (it will be TOS 1.00 from 1985 then, and eat about 220 KB of your valuable RAM), or try to get hold of a six-chip TOS ROM set (versions 1.00 or 1.04 are suitable) for instant startup without lengthy boot disk loading and without RAM loss.

bye, Peter

The fan was included since:
a) the power supply is internal on the Mega, moving more waste heat
inside the case
b) the possibility of additional electronics on the plug-in card

From what I gathered from the docs, you need WinNT or Win95 to run
MagicPC. I would have tried the software by now, except my wife is still
running 3.11 as well.

Just make _darn_ sure the notch isn't oriented backwards! Check the silkscreen on the motherboard to be absolutely sure. I had to drive all the way to Hollywood (the CodeHead lair) and get a new set because I had brain fade and put the chips in the way I could read the writing and the writing was backward.

>Kb chips. Could I simply replace these with eg 512 Kb chips, thereby doubling
>the ST RAM? Or would I have to rely on some plugin board?

AFIK the ST RAM requires a daughter board. You cannot add ST RAM to the
TT motherboard by swapping out chips.

>And the TT RAM - it's actually 4 regular 30 pin 1 Mb SIMMS on a card with a lot
>of 3 pin jumpers. Providing that I change some jumpers, could I replace the
>SIMMS with 4 Mb SIMMS? I suppose they'd have to come in pairs, like on the STe,
>but OTOH I might already be out in the blue. ;)

You must add TT RAM in groups of 4, not groups of 2 SIMMS. The TT is a 32 bit
OS and requires 4 simms (which are 8 bits each) to get the 32 bits required.

I assume your TT RAM daughterboard is a CA40158 MODEL #??
The jumper settings for that board are:
1 meg X 8 simms: W101 2-3 W102 2-3 W106 2-3
4 meg X 8 simms: W101 1-2 W102 1-2 W106 1-2

In other words, simply move the jumper from pins 2-3 on those three locations
(w101, 102 and 106) and put the jumpers on pins 1-2.

Those are 30 pin SIMMS, no parity. It might be that 1X9 and 4X9 SIMMS would
work .. the 1 X 9 does work on an STe, but the manuals for the TT
state a requirement for 1X8 and 4X8 SIMMS, so that would be the safest bet.

4245. What is it worth:

Newsgroup: comp.sys.atari.st
Date: 1996-06-09 00:00:00 UTC
From: richardw@dma.org
Message-ID: <4pesh0$vpu@sally.dma.org>
Source record: 143852

I am wondering IF I sold the following Atari ST/STe hardware how much would I get for it. I am planning on getting an IBM Pentium system with the Gemulator Board (so my software doesn't go anywhere, well I may though in some stuff (shareware, freeware, or public domain)). Here is the configs:

Color Monitor (SC1224)
Monitor Master Switcher
Monochrome Monitor (SM124)
Atari 1040STe (4 meg RAM - TOS 2.06)
100 Meg External SCSI Hard Drive (w/software)
External 1X CD ROM Drive (no CD ROMS though)
14.4KBPS External Zoom Modem

So what would be a good asking price??? I AM NOT SELLING IT NOW THOUGH! It won't be on the selling block until I get my IBM PC Compatable (Pentium) with the Gemulator Board (4.0 or higher).

Thanks...

Richard Wegner - richardw@dma.org

Any Atarinos users out there?

After getting fed up with the rest, I have started using atarinos again. Sure it's a bit slow, sure it's a bit cranky but I like it better. And I get nearly 3000 cps on a 28800 modem.

But. It does odd things with the system clock, and sets a future time in the nntp.dat file.

Anyone know why, and what the fix is?

All help gratefully received.

>that makes any difference?

I did, and it didn't. My modem ignored everything after the null, so that
was that. But the problem has been fixed in Oasis 2.05, and it dials for
me just fine. You might try removing ATV1 from your own init string and
seeing if it still works.

I am wondering if there is a program out there that can convert .GIFs into either DEGAS, DEGAS ELITE, or SPECTRUM format? I have the converter from .jpg to .gif and it works great, but how about from those formats? Also, where can I get a .TN* viewer (like TINYVIEW.PRG) or something like that?

Absolutely. But unless you have a recent tos, (I'm not sure which ones!)
it must be formatted in the PC. Later tos'es format pc compatibly but I am
not sure which. There is a format program that will format PC-wise
even under tos 1.0, and IIRC it is called strangely enough "ibmformat"
or "ibmfrmt" or some such. It is on umich in the diskutil sec'n.

j> Any comments, good / bad / indifferent?
j>
j> They are Atari dealers I believe.

Well, the good thing is that they are Atari specialists and they're just about the only company over here that'll bring over the better German products and have them translated. They don't develop anything themselves as such.

If there's a bad thing to say it's that you wouldn't go to them looking for a bargain. You pay the full price or not at all. But I guess that's why they are still around while others are looking at pastures new...

You can certainly buy from them with confidence, I'd say.

Does the "direct-to-disk" feature of extendos pro save in some standard
format to disk ?

AIFF would be nice. It would make it possible to transfer sounds from
audio cd's (for sound sampling) digitally to CAF.

Are you a Calamus user??

I have for sale, the excellent on line help program and manual for
Calamus 1.09 called Calassistant.

It is loaded and sits in the background so that when you need help - itï¿½s
there instantly!

You can check itï¿½s specifications at:

http://www.compulink.co.uk/~sta/15_cala.htm

Where you will also see that its price from the suppliers is ï¿½19.95 + p&p

Iï¿½M ASKING ONLY ï¿½10 WHICH WILL INCLUDE P&P!

Check it out then get back to me!

Imagecopy 3.5 for sale

This excellent image manipulator answers just about every request that
you could ask from it.

The software is supplied on floppies and its possible to use it as an
accessory too.

IMAGECOPY SUPPORTS PHOTO CD STANDARDS TOO!

As well as: art director, Calamus Raster Graphics, Degas, Doodle,
GIF, IFF, IMG, Fixed palette IMG files, JFIF, Macpaint, Neochrome, OS2
bitmap, PCX, PIC, Pictor, Pixart, Portable bitmap, Prism paint, RSC free
image, Spectrum, Sun rasterfiles, Targa, TIFF, Tiny, Truepaint, Windows
Bitmap, XGA images.

True colour IMG files can be saved in 16 bit, 24 bit or 32 bit format.

Thumbnails are supported too along with slide show facility

Conversion from and to many of the formats above - INCLUDING BATCH
CONVERSION!

Print your own clip art and image catalogue

A pop up menu provides image manipulation options including the ability
to flip and rotate images, adjust aspect ratio and select 9 zoom levels
from 1/16 to 16X.

Thereï¿½s a 720 DPI option too for those of you with printers such as the
Epson which provide that facility.

Check out the full specifications at:

http://www.compulink.co.uk/~sta/15_IC4.htm

This page is for the latest version which costs ï¿½34.95 - BUY IMAGECOPY 3.5 (PHOTO CD SUPPORT VERSION) FROM ME AT ï¿½12 AND UPGRADE FOR ï¿½6.95

All Imagecopy software is supplied on the original floppies and included 2 manuals all of which are mint condition.

Email me if interested.

Yes, it can. A much simpler (at least when working with it) possibility
is to use the PC Harddisk for your Atari as well.
All you need is a Null Modem, and either Ghostlink, or MinTNet. MinTNeT
is a lot harder to set up, but it provides TCP/IP. This means, that you
can do anything the Internet provides for you between your two
Computers.

I think, that the most important advantage is that MinTNet (in this case
the NFS Client) is a Unix combatible Filesystem. So you don't have
problems with long Filanames.

Let's say you have Win95 or OS2, or Linux installed on your PC. All of
these use long Filenames. All you need is a NFS Server for the PC. Linux
has built it in, it`s no great deal with OS/2, and even Win95 has no
real Problem with it. After having set both sides up, you will find the
specified folders or drives of your PC Harddisk in U:\n\ on the Atari.
MinT, MinTNet, and NFS.XFS should fit on one boot Disk. so just boot the
Atari an be happy.

Christof

I would sugest GemView. This is not only a File Viewer. It can save any
loaded File in various formats. So it has no problem converting GIF to
Degs or something like that. Gemview has also some elementary Picture
Processing Functions as modules. There is scaling and Gamma correction
for Instance. The system of Gemview could be a very poverfull Picture
processor, if someone wrote the modules for it.

There is an other Fileviewer said to be very good. It`s called
"Zeigsmir", I don't have any experience with it. I`ll have to download a
correct archive before I decide wich one I will register for.

I saw this on an Amstrad CPC464. And read a review of it in magazines at
the time (1987). They really liked it!!

It was not a game as such, but a sort of early screen saver. It was for
people who left their machine on doing nothing.

The concept is that of a pet gold fish, ie the guy just goes about his
normal life, but you have to feed him (and his dog) or they starve or
become ill.

As I remember it you could phone him up (he had a phone) and offer to play
cards with him, other than that there was not a lot to do.

: BTW I'm using Cab v1.3 with the Cab-for-MintNet-177 overlay.

How did you manage that? Just by upgrading to the latest versions? I'm using CAB 1.2b and version 1.76 of the overlay, and I invariably get an Error -34, File not found message and then a blank page when I try to view online pages. Offline works fine. My system is a TT, TOS 3.01, Mint 1.12h3, NVDI 4, Crazy Dots 2, AES 4.1.

4275. Re: Why isn't possible to connect a Iomega Zip-drive to a Atari ST parallelport ?

Newsgroup: comp.sys.atari.st
Date: 1996-06-10 00:00:00 UTC
From: Christof Donat <cdonat@in.tu-clausthal.de>
Message-ID: <31BC5D89.41C6@in.tu-clausthal.de>
Source record: 143760

Well, you can connect it, but that would not do anything. What you need is a driver. And there is another point. I'm not shure, if the Atari Parallel Port supports all the stuff needed for the zip drive. So get the SCSI version and everything is fine.

Christof

4276. Gemview query... I must be stupid...

Newsgroup: comp.sys.atari.st
Date: 1996-06-10 00:00:00 UTC
From: iocentre@tcns.co.uk
Message-ID: <ADE2149496681C977@du169-162.ins.co.uk>
Source record: 143761

Hi all. I'm trying to get Gemview to load or save anything non standard.

It'll let me read and write the five options which are "built in", but nothing else. I've installed all the files, the preferences point to the right folders, and it reads all the modules for loading and saving when it starts up (and if I set it to another folder, it gives an error about not finding them) so it all seems okay.

But will it read GIF/JPG or anything else? Will it ****... ;)

I'm basically trying to get images from work (Apple Mac w/Photoshop) onto my poor little ST desktop at home, so .PI3 files. Any ideas?

Thanks,
Tim.

>It did it three times in a row, with rebooting each time.
> Not necessarily an important page, but an error is an error.
>
>--
>Prof. Boris D. Cahan
>

I just tried that URL and got the same problem. One differents though:
I didn't receive any warning. After a half page I was trowed back to
the desktop.
Looking at the WWWCACHE folder I've noticed that all the gif's have
the same size (105 bytes). These files contains the same text:
"document type not accepted by browser"
BTW I've done the testing with CAB 1.31 and the Cab-for-Mintnet
overlay and N.AES (Multitasking).
With Chimera the page looks great.

I'll send you TOS on disk, if you go for that option. Rich is right; it's
a poor choice. The reason I have it is, a friend picked up a 520 at a yard
sale, and found he couldn't run anything, after TOS had consumed some of
the RAM. I also have a dead 520, so I could sell you the TOS(1.0) in ROM.

4282. Custom WWW SetUp

Newsgroup: comp.sys.atari.st
Date: 1996-06-10 00:00:00 UTC
From: guy@swampdog.demon.co.uk
Message-ID: <834511330_OASIS_@swampdog.demon.co.uk>
Source record: 143767

It seems some people are wondering why SetUp is not doing all it could. I'll try to make it a little clearer!

1) the SetUp was designed purely to deal with STiK. It was and still is not intended to install the Web Browser. The fact that it can install files for the other packages is due to it using batchfiles - a side effect which can be put to good use by the end user, especially as it automatically creates folders in the destination path and allows renaming of the file during the copy, in addition to precisely defining any problems that may arise. However, as I have no control over what the end user chooses to download, the point is moot.

2) it should not only maintain stik variables about which it knows, but also those about which it does not, plus do its upmost to maintain the order in which they appear.

3) it can be maintained by the end user. Even if a new variable is added to default.cfg in the provider list or in the installed default.cfg, it will pass or can be made to pass, unchanged through / back to the installed default.cfg used by stik, so if I never updated it ever again, the current SetUp would be useful for quite some time.

4) part of (3), the working default.cfg even if has been *manually* created can become part of the SetUp, either by adding it to the "provider list" or by forcing it to be reparsed in preference to one in the provider list.

5) depending on requirements, one or more of the four programs can be selectively removed from the system, which does not leave floppy only users in the lurch.

If the end user were to take the time to move all the various packages into SETUP\ then simply by using a text editor, the relevent batchfile can be changed so that future installations are automatic and tailored explicitly to their system - the bext plug and play is ultimately the one you do yourself!

Read the docs folks. :-)

>>properly.
> That was the problem! Now I feel even stooooopeder!
>Tell me WHY the setup program doesn't move the cab.ovl where it belongs???

In order for the SetUp program to install files, the files (ie the folders for the other packages) really ought to be in subdirectories within SETUP\, preferably SETUP\INSTALL\ but for various reasons this has not been possible. The SetUp in www130 took a risk in that it used the ".." operator in the path and kludged the cab.ovl copy operation and Cab's Language resource into the batchfile used by SETUP.PRG. INSTALL.PRG *should* have been responsible for this but it would have meant "..\.." being used in the path which is unreliable on early TOS versions. Worse, I know from past experience it can also be extremely effective at triggering the 40 folder bug. With the amount of folder accesses performed by SetUp the risk of trashing the FAT on an old system was too great. Hence it was removed.

>It does ALMOST everything else????

I'm going to explain a bit about SetUp in the thread "Custom WWW SetUp". There is a lot of power under the hood but it isn't immediately apparent.

>
>Anyone know why, and what the fix is?

I personally have changed "time auto on" to "time auto off" and rely
on my system being set very slightly behind GMT.

If you do want to use the timeserver, then look carefully at the
timezone offset in one of the Oasis dialogues, probably in setup
somewhere. Note also, that Nos uses an environmental variable TZ which
I have set within MagiC's environment file to

#_ENV TZ=GMT0

How you accomplish this on your system I dunno!

4285. F/X and 14meg Ram

Newsgroup: comp.sys.atari.st
Date: 1996-06-10 00:00:00 UTC
From: moomom@garlic.com
Message-ID: <4pi77i$1fnm@quake.garlic.com>
Source record: 143770

Hi, I have a 14meg Falcon with F/X installed. The problem I am having is that F/X will not work for me with 14meg of ram. I have tried my 16meg of f/x simms in a 4meg Falcon and it runs like a champ.

Is there anyone out there that has a 14meg Falcon with F/X installed and has it working. I know Georg Acher is working on a new version of F/X1.9 due to its problems. Would like to know if I am the only one having a problem with having 14meg ram and getting F/X to work. I get errors stating that I have the wrong Simms or defective simms in bank 1.

Thanks for your time.

Howdy !

If you have a spare CAF 2.04, I'm interested.

A man sold it for US$ 285 just recently - we all saw the ad here.

Anyway, hit me with an offer.

I'll pay for the shipping to Zagreb, Croatia.

Only e-mail please !

Good luck !

Tomislav Djigas

How do you figure...I can download the applications I need or buy
coverdisks from magazines that work very well on a 1 meg machine, but on
other platforms to do the same tasks you have to have at least 16 megs
for an expensive program that barely works fast.

BTW, if I get a RAM upgrade it's for a bigger Ramdisk :)

BTW, with rights come responsiblities. In other words, try not to sound
ignorant when stating your case. Even newsgroups have their own set of
conduct to go by, though I doubt it at times from what I read. This is
not a nasty flame, but a reminder. Class dismissed.... :)

How about a text viewer that works in low rez, mainly for game docs. So far I use QuickView which switches to med rez to read the docs and go back to low rez. I sure like to write somethng better though. :)

I've tried without success to configure my Sportster 33.6 to work. From what i
can tell the sportster will not do adaptive answer which you need to have. It
will do one or the other but not both... :<

4302. Questions about ST modem?

Newsgroup: comp.sys.atari.st
Date: 1996-06-10 00:00:00 UTC
From: Hakan Eriksson <e5he@etek.chalmers.se>
Message-ID: <1996Jun10.132903.25369@etek.chalmers.se>

Hello!

I have a few questions:

1. Is it possible to use any PC modem with an ST?

2. Does the modem use the same kind of cable as the printer does?

3. Is a 2400 bps modem sufficient for a basic terminal connection (no large
file
transfers or Internet connection)?

CH>have a HD or a graphics card in the Mega STe. The heat will probably go
CH>too high when you draw more current from the PSU.

Not only when you have a graphics card or a HD. A few years ago the fan in my MSTEs power supply stopped moving and after two hours of real silence the MSTE died (repair cost of about $200). So I would recommend to replace the internal fan to a less noisy one.

If I respond to a news article from work, I have to reply in email - my proxy
won't let me address newsgroups (I dunno why, ask Intel's sysadmins). Thus,
if I read it at work (on my breaks, people, I /do/ get them! <G>), anything I
might have to say on the subject goes out as email.

Doesn't your provider allow you a certain period of time to get your excess
email off the system? If not, I'd advise changing providers. That's half
the reason I left Teleport.

From: kennethm@tripnet.se
Message-ID: <834596176_OASIS_@tripnet.se>
Source record: 143715

In article <960609Z232454.997daveb@mbha.demon.co.uk>
daveb@mbha.demon.co.uk (daveb) said:-

>Any Atarinos users out there?
>
>After getting fed up with the rest, I have started using atarinos again. Sure
>it's a bit slow, sure it's a bit cranky but I like it better. And I get nearly
>3000 cps on a 28800 modem.

Hm.. I only get 1500-2000 cps at 57600baud.

>But. It does odd things with the system clock, and sets a future time in the
>nntp.dat file.

I'm running the NOSPOP3 version and time always gets 1 hour behind in
NNTP.DAT. This is under Geneva and with Oasis.

>Anyone know why, and what the fix is?

Have you set NOS to set the clock to your isp's time-server. This did
not work for me. The system clock went 1 hour off after every logon
even though the time-zone settings in Oasis were correct.

If you comment out the
time server
time auto on
lines in STARTUP.NOS and set your time-zone to GMT+1 you also might
get 1 hour behind in NNTP.DAT. This is actually ok as you will not miss
articles if your system clock is slightly off. There will be
duplicates in the NG file though.

4319. Problem with Second-Hand Atari 1040ST

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: M.J.Wright@ukc.ac.uk
Message-ID: <1565@kiwi.ukc.ac.uk>
Source record: 143716

Please forgive my ignorance concerning Atari's but I have just obtained an Atari 1040ST second hand which seems to boot up fine, displaying the usual start-up screen with two disks and trash bin, but when I try to load a program from a floppy, the machine appears to read the floppy OK (I can list all the files) but I do not seem to be able to run any programs (even those which are supposed to auto-execute!).

This has happened with several different disks so I am confident that it is not a disk problem.

Can anyone offer any advice on what the problem may be (I know this isn't much to go on!) and how I may be able to solve it.

Many thanks for any help,

Malcolm Wright
mjw3@ukc.ac.uk

4320. Problem with CAB :-((

Message-ID: <4pk7b9$r2v@news.rrz.uni-koeln.de>
Source record: 143717

Hi!

I have some kind of weird problem with CAB concerning one specific URL: Whenever I go to <http://hyperrust.org/> and try to go from this starting page to one of the given links, CAB connects to the chosen link, receives data, then goes into formatting page mode and ... my system crashes! No bombs, no nothing, just freeze. Then not even reset via ALT + DEL works, instead I always have to reboot my Mega ST 4.

Could please anyone go to the above given URL and then try to reach any of the links offered there, and then mail me what happened, so that I can see if it is only my CAB which can't process those pages or if it's a common problem? Maybe there's something wrong with these html-pages?

I'd be curious to know,

Andreas

4323. Thrift finds - my first brag post!

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: smedley@gte.net
Message-ID: <4pkqk8$1jr@duey.gte.net>
Source record: 143720

The last few days have been BIG for my collection. On Saturday, I visited a thrift store my friend said had some old video game stuff. They had a few ColecoVision games - the first I had found since I started my collection two months ago, so I snatched them up. As I picked them up, I dropped one. Bending down to pick it up, I found a ColecoVision on the bottom shelf! Naturally I grabbed it. There was a sticker on it that said "parts in back" - I figured this meant the power supply and switchbox, since the controllers were already with the unit. Imagine my surprise when the clerk brings a huge bag containing the power supply, two super action controllers, and a driving controller wioth the gas pedal! The price for all this? $15.95!!!

At the same thrift, I also managed to get a "Grubby" for my Mom's Teddy Ruxpin - she has been wanting one for years.

Yesterday I stopped in at a local used game shop which was recommended to me by the same friend. There I found boxed copies of Zone Ranger & Pitfall for my 5200, as well as River Raid & Space Shuttle for my 2600, and Jumpman Jr., Beamrider, and an unlabeled loose game for my new ColecoVision. But when I got home, I discovered thet the 2600 games were in fact 5200 games in 2600 boxes! Another odd bit - the River Raid had ColecoVision instructions, while the Space Shuttle had a photocopy of the 5200 instructions. As for the unlabeled cart, it was in an Activision type case, but turned out to be Tournament Tennis by Imagic. I haven't even seen this one on the ColecoVision release lists! How much did I pay? $2.00 per game.

And today I stopped by a different thrift store and found a MINT condition Odyssey 2, still in the box! It was even still packed in the styrofoam, and all the pamphlets and papers were in mint condition. Even the warranty card was still there. The absurdly low price for this pristine gem? $9.95! Not only has my collection grown wonderfully, but I did it dirt cheap as well!

the 1772-02-02 is not a AJAX. This chip can can do HD however. I modified several ATARI's to support HD using this chip. For spare parts
try MABN in Schiedam. Paul has a large repair stock (from ATARI Benelux dump...)

4328. (FRG) Problems with Speedo GDOS 5.0c

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: stu30251@srv1.mail.uni-kiel.de
Message-ID: <4pjubc$5lr@infosrv.rz.uni-kiel.de>
Source record: 143725

Hi!

I recently installed Speedo GDOS 5.0c on my MEGA ST 4 (TOS 1.2), and use it
together with a German word processor called SCRIPT 5.

But I'm having two problems: first of all I didn't get the install program
started due to whatever reason, and neither do I have an idea how to configu-
rate the ASSIGN.SYS-file as to install GDOS-Fonts.
The other problem I have concerns the TrueType-Fonts that I recently installed
(I think they are PD-Fonts). Everythime I change from a TTF-Font to another
TTF- or SPD-Font and try to print it out, the computer crashes and three
bombs appear on my screen. After that I need to reset, because the computer
doesn't read any mouse clicks anymore.

If anyone can help me or has similar problems, I would be happy to hear it.

Thanks, Carsten

4329. New Product: Photoline-Photoshop like Image Editing for ATARI

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: aa414@FreeNet.Carleton.CA
Message-ID: <4pkmaa$5h4@freenet-news.carleton.ca>
Source record: 143726

Here is the press release of Photoline (English version), from Homa Systems House. Photoline is what the ATARI platform needed, an Adobe Photoshop clone.

For me information, please contact us:
Homa Systems House
email: aa414@freenet.carleton.ca
www: http://www.magmacom.com/~nima
tel: Canada + (613)722-0901
fax: Canada + (613)722-9061.

<----->

PHOTOLINE

A new high end image editor that's powerful and easy to use.
This program is feature packed not only with raster tools but all the standard vectors tools you'll probably ever need, an it's incredibly fast too! Some of the feature list are as follows:
- many filter tools and real unsharp masking, as well as a user definable filter tool that can, create, save and load.
- a multitude of masking features
- definable undo
- block and lasso tools, with fast and definable copy, cut paste functions, (paste or stamp any level of transparency without intermediary steps)
- saves and loads the following formats:
Save-*.TIF, *.IMG, *.CVG, *.GEM, *.JPG
Load-*.TIF, *.IMG, *.GIF, *.ESM, *.P11-P14, *.IFF, *.NEO, *.PAC, *.BMP, *.PCX, *.JPEG, *.PCD, *.CVG, *.GEM...
- straightforward and simple to use interface, set with the user in mind
- work on any image in any resolution while maintaining the original image properties (e.g., edit a 24bit image in monochorome, or vice versa)
- zoom from 6%- 1600%
- complete set of vector tools
- scan directly into program with GDPS drivers
- color printer and plotter support
- histogram and CLUT features, as well as colour calibration
- convert, scale, rotation functions
- work in RGB, HIS or CMYK modes
- all tools have intensity settings
- magic wand (AutoMasking), paint, eraser, flood, stamp, colour picker modes

- user definable pixel editor for each tool, control intensity and gradation curves, circular or rectangular mode
- 24 built-in brushes, load and save user-definable brushes, brush editor
- Photo CD import including new PRO format
- vector font support through NVDI 3.02 or later
- project pictures through X Y Z 3D space
- Grid distortion
- drag and drop
- modern 3D interface and fully multitasking
- compatible with all Atari operating systems
- and many many more!

Hello,

I've tried the given URL with CAB 1.21b and 1.30 both with
Mint/Mintnet.
With CAB 1.21b/Cab-for-mintnet-116 overlay I hadn't no problems at
all.
Cab 1.21b/Cab-for-mintnet-117 overlay: Timeout errors+wrong colors

Cab 1.3/Cab-for-mintnet-116: Ok
Cab 1.3/Cab-for-mintnet-117: Timeout erros+wrong colors

Conclusion: There is something wrong with the Cab-for-Mintnet-117.

For anyone who dident have the good fortune to unwittingly download
the 2223 line binary posting entitled "circles.zip" heres what was in
the zip file
1) One of the shortest crapiest animations I have had the missfortune
to view
2) The following doc file, or part of it,

This animation, being 7 years old, was converted to preserve the hard
work of people who made animations for the Atari ST. There are more
to
be converted in the future (From the Atari ST and Amiga) and hopefully
others will contribute animations.

If you liked this animation and would like to see more send $1 to:

David D.
P.O. Box 80
Newton, NH 03858

If you want the software and instructions to convert animations from
the Atari ST to Windows AVI send $5 to the above address.

BARSTEWARD!

>
>George Iken
For what its worth, I just upgraded an atari TT memory board with 4 4x9 30 pin simms from a PC and it worked flawlessly. One thing to watch out for is that there are problems with certain companies' simms. Specifically you might want to avoid:

1) ALL Siemens SIMMS
2) All Mitsubishi modules
3) Samsung & NEC 1x8's and 1x9's

This is actually from the instructions of the GE TT/32 memory board but I think it can apply to the Atari TT memory board as well. I had some Siemens simms and tried them in the Atari board first and the computer wouldn't boot, generally got 4-8 bombs after magic loaded before anything else loaded. Booting bare and it would run for a few minutes then hang. After replacing the Siemens simms with the Fairchild simms from the PC it has worked great, and the PC doesn't mind the Siemens simms at all.

Pete

PS. On my Atari memory board there are 6 jumpers in two rows, row 1 has 1 jumper and row two has the other 5. Each jumper can be on pins 1 and 2 or 2 and 3 (Up or Down) so the settings look like this:

4M (4 1M simms) - U
U U U U D

16M (4 4M simms) - D
D D U U D

If anyone is interested, I have a couple of
AlberTT graphics cards for sale:
they are 1024x768 x 16 color cards for the MegaSTE and TT computers.
.....$75.00 each.

send E-mail
or call (417)624-8280 and ask for Joel

It's Windoze 95 only I'm afraid. Pity I didn't know this _before_
downloading it!

I bought a mono monitor from them with confidence...

and when after 13 months I realised that the screen area had been shrinking
since I got it, were they interested?

I was offered a repair at >60 UKP (IIRC) and not even an offer of a discount
on a replacement monitor.

The only other thing I bought from them was MagiC - luckily there was not
as much to go wrong with this :-)

You can restore your factory presets without using a sys-ex editor.

Enter global mode

Press right arrow until LCD reads "Preset Data" on the top line. "OK"
flashes on the bottom line.

Press [yes] to load them or [no] to cancel them.

If you pressed [yes], the LCD reads "Are you sure?" and "OK" keeps
flashing.

Again, press [yes] to load or [no] to cancel.

Brill so far,

>load a program from a floppy, the machine appears to read the floppy OK
>(I can list all the files) but I do not seem to be able to run any
>programs (even those which are supposed to auto-execute!).

There is no way of knowing the problem unless you can give a little
more info, by the fact that you dont mention any error messages then
can we presume there where none,
Also can we presume the disks you are trying did not come with the
computer, as you would have tried them when buying?

So one possability is the programs are STe specific?, as you have a
one meg then it is highly unlikely that it is a memory problem as
hardley anything needs more then one meg,

Are these games or serious applications, as you are trying to run
from the desktop then maybe accesories have been installed and maybe
they are eating the memory, look for any files with a .ACC extension
and disable these by renaming,

I really would (nicely) suggest you re-post with a little more
information as to exactly what does happen when you double click on a
*.prg file, and maybe even tell us the programs you are trying :)

Cheers.............!ynoT

Source record: 143738

This message from a002692t@bcfreenet.seflin.lib.fl.us to All came in on a wing and a prayer...

a> I have a 520ST, and I just got the monitor for it. I connected
a> everything, and the computer seems to work fine. However, when I turn
a> it on, the "Connect and power up disk drive and click ok..." screen
a> comes up. I do this, but it has no effect. The disk drive is connected
I've never seen this myself, but what I am wondering is whether it is one of the very first STs that required TOS to be loaded in from disk. In that case the computer would "know enough" to be able to ask for the systems disk to be inserted into the drive. The fact that the drive spins continuously could be a symptom of the necessary disk not being present.

Only a guess.

4344. UUCP-ST Progress Report

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <550212107.44470.97.starship@3rdplanet.com>
Source record: 143741

I would judge that a full release of version 1.0 should hit the streets before July. News_In is now running and completes the actual news/mail part of the package. As an aside, both News_Out and EmailOut just got an update that increases their speed of processing outbound messages dramatically, by a factor of ten.

UUCP-ST - To Do List
====================

(In order of current priorities)

- Create and test the Wormhole program (for routing .ftn packets via email)
- Create the Timezone program (to properly set your system clock after NOS sets it to GMT)
- Add an Archie server to Email_In
- Modify Email_In to handle attached files
- Fix the CC: and BCC: problem in EmailOut (if it's really a problem)
- Add logging to EmailOut (partly completed)
- Add gopher/archie filters to EmailOut to block routed files
- Write the User Editor
- Write the Key Generator (can't unlock the programs yet!)
- Write the News Manager
- Write the Setup Editor/Installer Program
- Modify AgeHistory to work with either a number of lines or file size setting (currently is #/lines only)

h>> BBS still online or do they have an official FTP site? Otherwise
h>> you'll have to mail them.
s> Sid, there are not now nor ever were any /PD/ ICD utilities. The only
s> people who have a legal right to download ICD's utils are people who
s> purchased ICD hardware and want to update their software. Any version
s> which purports to be PD is, flatly, stolen.

Yes, obviously they're copyright and everything else you've said, but I hope you appreciate that while the earlier versions weren't able to work with anything other than ICD hardware they'd be useless to anyone else and were available for free update from ICD supported areas such as Genie or their own BBS or any of their authorised distributors, and so gained the 'PD' tag (although Freeware is a better description because they retained copyright). I use the term to distinguish it from the Pro utilities rather than to imply anything else.

I speak as an owner of an ICD AdSCSI (with the free utilities), Cleanup and ICD Streamer software (bought separately) and ICD Pro utilities (bought separately), so I think I've done my bit to support them. I'd have bought an internal HA for my MSTe if Tom Harker would've recommended one to me too.

4361. Extendos CD audio to disc (was: Re: Atari CDAR...)

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GFLREEVCUp@tos.ak.planet.gen.nz>
Source record: 143799

It saves in AVR format, unfortunately. I think there is a PD program which
does the same things somewhere, maybe this saves in AIFF format.

At least you can convert AVR to AIFF using a conversion program (I believe
"Five to Five" is capable of this).

Unfortunately, the saving has to be done at single speed, it seems. I would
like it know if there is a way around this - it would be nice if the 4x speed
drive could be used to it's full potential when saving data off audio CDs.

4362. Problems with Magic 4

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4pivdc$hb@dodgson.math.psu.edu>
Source record: 143800

I just got Magic 4,and I've been trying to run it on my Mega STe, but even with no auto programs and no desk accesories installed, as soon as I try to open an HD icon, I get two bombs and a message saying that "a user program has destroyed a memory block". Come to think of it, as I wrtie this I realized that the one thing I haven't tried is to turn off the cache: maybe is ICDBOOT.SYS that is to blame. Oh well, I'll try that and report my findings. However, if there is anyone who has suggestions, I'd like to hear them, because I have just spent the two most frustratng hours of my life trying to get it to work.

Gustavo

4363. Re: Problems with Magic 4

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4pj171$ts@dodgson.math.psu.edu>
Source record: 143801

It's me again. I have just tried disabling the cache, but the troubles continue (athough they have changed somewhat): now I can access the partition that I booted from, but when I try to do the same with another partition, I hear a click like disk access is about to start, and then the busy bee freezes, the green light in my SyQuest drive goes from green to yellow and nothing works any more. I insist, all this while no programs are running, no TSR's are in memory and no accessories are loaded; the only thing running from the moment I do a cold start is the HD driver and Magic itself. I'm beginning to suspect there is an incompatibility between it and ICDBOOT. Has anyone experienced this kind of problem?

Gustavo

Hi,

I have a question about upgrading DD to HD floppy disc.
I believe that in the Atari 'community' long time ago many users upgraded their DD floppy drives to HD ones by means of a small hardware project. For this a floppy disc controller is necessary which can run at 16MHz instead of 8.

This chip should be the WD1772PH-02-02. Isn't this chip called 'Ajax'?
I am looking for such a chip to upgrade my A3000 (yes, an Acorn machine, I'm sorry ;) to HD floppy. I've got the schematics, just not the chip.
It is still available at some stores but at rediculous prices, i.e. well over 40GPB.

If anyone can supply such a chip, or knows how to get one (more) cheaply, I would be very happy :)

Thanks in advance,
Auke Nauta

You MUST be running Windows 95.

I have briefly tried it and it works.....just how well it works, I'm not sure because I don't read German very well and I had trouble getting things to work.

I look forward to the English version.

4366. How to open Portfolio case?

Newsgroup: comp.sys.atari.st
Date: 1996-06-11 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GFLRAGUQUp@tos.ak.planet.gen.nz>
Source record: 143804

I have an Atari Portfolio palmtop computer which has developed a problem
with the ribbon cable joining the keyboard to the display.

It appears that one/some of the wires have become broken, since the deisplay
remains blank until I til it to a particular sharp angle, at which point
it comes on again.

Unfortunately, I cannot figure out how to get either the display or the
keyboard apart - I did unclip some clips and end up with the display coming
partially apart, but there still seemed to be something holding it near the
centre. As for the keyboard, that just did not want to come apart at all.

I hope that someone can tell me where the screws are hiding, and any other
tips/tricks for getting the case apart so that I can fix the cable.

Any suggestions are appreciated.

Source record: 143505

```
------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

FURTHER INFORMATION ABOUT NAS96

The best way to get new information is to join our NAS96 mailing-list.

4370. Spectre GCR -- excuse my ignorance

Newsgroup: comp.sys.atari.st
Date: 1996-06-12 00:00:00 UTC
From: dano@ic.net
Message-ID: <4plik3$osi@condor.ic.net>
Source record: 143605

I just picked up Spectre 3.0 -- with ROMs, but no manuals. I wanted to ask a few questions.

I'm currently getting 6.0.8 install disks. In the mean time, I'm wondering about the following things.

1. Why does it have a drive cable? It appears to use my internal MegaSTE drive just fine. Could a dedicate a drive to it if I wanted with the cable?

2. In order to use a hard drive with it, do I need to have a seperate HD, or can I use a partition on my current one?

Any information or hints you can provide would be appreciated.

-Dan

Ok.

The Early Atari ST models do not support bi-directional communications over the printer (parallel) port.

Not sure, but believe this is also true of the STe line.

I have no specifics of the TT model line.

However, the Falcon model DOES support bi-directional communication turning the parallel port into more than just a printer port. Although I have heard this may not be quite the same as those ports defined on the PC's.

For a Zip drive to work (floppy or hard drive, you call it) on such a port, you must have two way communication.

Early printer ports don't support this.

A while ago I read about a utility program that changes the bootsector(?)
on an ST formatted floppy, to DOS format.

It does this without changing any of the file data on the disk.

I know that these are similar anyway but it will let a PC read an older
formatted ST disk.

What is it called and where can I get it?

Thanks in advance,

Julian.

>Can anyone offer any advice on what the problem may be (I know this isn't
>much to go on!) and how I may be able to solve it.

Programs icons look like this ...

```
|----------------------|
|----------------------|
|----------------------|
| |
| |
| |
| |
| |
------------------------
```

and end in one of .PRG, .TTP, .TOS, .APP, .GTP.

Either left click on them once so they are inverted and use the menubar
"open" option, or just double click (left button again).

The other type of icon that looks like a leaf of paper when opened
(same way as for programs) should display a box saying "show, cancel,
print".

>Many thanks for any help,

If neither work post some details of the program names but it would
tend to indicate some sort of fault.

Rich,

It is very annoying to have to keep reading your tag lines,
over and over. I know that I am not the only person who feels that tag
lines are a waste of net bandwidth. Often the tag lines take more space
than the message, itself. I know you want to advertise your product, but
if you could limit the tag lines to once or twice a day, I am sure many
people would appreciate it.

Thanks,

Bill

PS__ I am posting this on comp.sys.atari.st, hoping that some of the others
with long signatures will take a hint.

4383. C-Lab Mark X audio problems

Newsgroup: comp.sys.atari.st
Date: 1996-06-12 00:00:00 UTC
From: mgrove@owens.ridgecrest.ca.us
Message-ID: <mgrove-1207961154380001@news>
Source record: 143618

I had seen a post recently about a user having
problems with the audio in/out on one of the new
(U.S.) C-Lab Mark X Falcons.

The following is what I found to be the problem
that existed with my machine.

The new audio card that C-Lab has made to
accomidate 1/4" plugs was installed upside
down, if you use as a reference the silk screen
identification on the board and the printed
diagram on top of the Mark X case. This in it-
self would only reverse what one would think
was the input and outputs at the rear of the
machine. However, the connector from the motherboard
to the audio card was improperly installed as well,
making it seem like there was output to only
one channel (poor at that). There are five pins
on the motherboard that this cable connects to.
The two pair that are grouped together are the L/R
audio in and out. The lone pin with one wire
should connect to the pin on the audio card that
is tied to the ground plane of the card. Trace
this lead through the connector and align it so
the single pin wire on the motherboard connects
to the pin that is tied to the ground plane of the
audio card. Your audio should work fine now.

Alternately, as the audio card will not fit
properly if the internal speaker is left installed,
(glued is the word here) one could switch the connections
on the motherboard to get the proper in/out reference,
keeping the ground to ground connection proper.

Another problem I have noted with the Mark X is that
C-Lab has used PAL motherboards for the U.S. models.
There is no RF modulator installed on the motherboard.
When using a composite cable adapter on the monitor port
(for using a VCR or video monitor) your display will
only be in black and white reguardless of the video
settings in the Falcon menu.
So much for video output to VCR without an expensive
video scan converter for the VGA output.......

If you already have a ram card that has the simm's on
top of the board, you will not have room to use the card

without hacking the C-Lab utility mounting rack :(. I purchased a Wizztronics ram card. The 72 pin simm installs on the underside of this card keeping it the same hight as the standard Falcon memory card.
In other words, you will need a 72 pin simm and Wizztronics ram card for a 14mb upgrade. I just paid $135.00 for a 16mb 60ns simm from my local PC dealer. I think Wizztronics gets $99.00 for their card.

You only get the standard powersupply with no extra connectors as standard.

The internal SCSI connector is not standard. $60.00 for the non-standard IDE/SCSI/powercable. Still uses the standard powersupply.

A replacement powersupply can be obtained from JAMECO at http://www.jameco.com Request a catalog and take a look. If you lack knowledge in powersupplies have an electronics type friend make the selection and installation for you.

The new case is very clean and sturdy. I just wish they would have taken the time to test the assembled units before shipping, and spent another couple of bucks replacing the powersupply and installing a standard SCSI connector.

I'm not being negitive, just bitching.

Mike

Message-ID: <31BEB47C.7EC1@eerie.eerie.fr>
Source record: 143620

I'm using MAGIC 4 and I had problems with ICDpro 6.55 (DMA support).

But now I have SCSITools(and USHI) and it's wonderfull. It's as faster as ICD,
only problem: the tools aren't as powerfull as the ones for ICD.

Enjoy your FALCON...

Nicolas MOITRIER.

4389. UUCP-ST/Wormhole Progress Report

Newsgroup: comp.sys.atari.st
Date: 1996-06-12 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <550267026.60511.29.starship@3rdplanet.com>
Source record: 143624

The UUCP-ST package is now sufficiently complete for a Version 1.0 release. I'll be watching for a few more days to make sure there are no unnoticed bugs, and the target release date is 30 June. Documentation is growing apace.

Coding on WORMHOLE has begun and so far, it can successfully identify Wormhole packets in email, extract them to a temporary folder, and grab the original filename from the resulting UUE file. Tonight I'll work on automating extraction of the original packet to a Fido Technology inbound folder. I expect to have a working model ready within a week. Any beta testers want to help me send/receive fido-style mail via the Internet? You need a working NOS setup and a Fido-style mail tosser (e.g., Jetmail or IOS); a front end such as Semper or Binkley is /NOT/ required at all. Something to read the Fido message bases (LED or a BBS) would be helpful.

The best business management accounting package that runs under TOS is. . .
BEST Business Management. It's archaic in the respect that it doesn't
automatically make double entries, but requires manual ones, but otherwise
is capable and cheap!

So who cares? It's still a apple, this area is for ATARI ST/TT/FALCON users, a step above the apple w/worm.

Responses like the above are pretty stupid. Descent people try to work with others, not make stupid remarks like the above. If thats how you interface with people, I feel very sad for you. I think your the w/worm!!

I still love and use my Atari equipment. Since you are so cool, why dont you do an Atari magazine. I am waiting to subscribe. Let us Atari users know what you are doing. Well..... We are waiting.

Tom

**To all the other great folks out there in the Atari world, sorry to flame at this person but his remarks are just really poor. People like this destroy the fun.

Nick Faldo's Championship Golf, Overkill, Pinball Fantasies,
Ryder Cup Golf, Seek and Destroy, Sensible Soccer International,
Seven Gates of Jambala, Sleepwalker, Striker, Summer Olympix,

SuperFrog, Super Methane Brothers, Surf Ninjas, Total Carnage, Trolls,
UFO: Enemy Unknown, Ultimate Body Blows, Whales Voyage, Zool I&II
Syndicate

CDS THAT DO NOT WORK!
Alfred Chicken, Brian The Lion, Cannon Fodder, Chuck Rock I+II,
Dennis, Impossible Mission 2049, James Pond 3, Lost Vikings,
Manchester United, Nigel Mansell's World Championship,
Pirates! Gold, Project X, Sabre Team, Sensible Soccer,
Simon The Sorcerer, Shadow Fighter

Anything else you want to be listed? Just suggest it to me,
but if I like it, then _be prepared_ to give me a healthy
collection of names for it.

Help needed with Atari ST/Falcon software. Many of titles
above exist for it too, but I have no information which
include modem/cable options on ST versions too. Therefore,
I shall not mention ST on them, unless I have clear
verification from an ST user.

Want to help me with the lists? I could use someone
with co-author, collecting software titles for those lists
with me, so the updates would be more complete and
happen more often. Co-author MUST have E-Mail.

All lists are updated more or less regularly, depending how often
I come across new list-worthy items myself, or anyone cares to
report them to me. I can be contacted at several sources:

!! E-Mail: jkauppin@muikku.jmp.fi !!

IRC: "Grendel-B" (#Amiga, #C-64)
MikroBITTI BBS "MBnet" as "Jukka Kauppinen"

Internetters : PLEASE USE E-MAIL!

Please be active and report any mistakes and additions. I can't
personally find everything, but would like very much help the
computer community and games freaks with as complete list as
possible.

This list is freely distributable, and I encourage everyone to
do so - but please also mention the Version-number. Suggested
filename : GGLxx.* (LZH or TXT, please). xx for version number,
like GGL21.TXT. Thanks!

That cable plugs into the out port on either your MegaSTe or your external
drive, so that you can format disks in Mac format!
>
> 2. In order to use a hard drive with it, do I need to have a seperate HD, or
> can I use a partition on my current one?
You can do a repartition on the last partition on any one of your hard
drives. You will lose whatever is on that partition, I would suggest that
in addition to how many ever large Mac partitions you make that you also
make one small <5Meg partition and leave it as MFS format OOP type,
instead of the ACK HFS type, this will let you use the transverter
program to move stuff from there to your ST partitions. Comes in handy if
you d/l mac binhex files with your st telecomm program! Make sure it is
the Last partition on that drive!! Diamond Edge and ICDfmt.prg both do a
nice job of reformatting for Mac, but you may have to do it twice in a
row to get them recognized!

>view online pages. Offline works fine. My system is a TT, TOS 3.01, Mint
>1.12h3, NVDI 4, Crazy Dots 2, AES 4.1.
>
>THeo
>

I wish I knew exactly what I've done to get Cab working. I remember me
that at the time I had the blank page problems I was using the mintnet
overlay together with the the Cab_jpeg overlay. Deleting the
cab_jpeg.ovl solved the problem for me. I don't know for sure if this
was really the trouble maker but if you're in the same case give it a
try. Try also to delete the wwwcache folder contents. It might help.

Upgrading to the last version? I sometimes use the old version. It
runs smoothly.
Last night I've done some testings. I did all the testings with the
same URL http://hyperrust.org
1) Cab 1.2b with the Cab-for-mintnet-116 overlay: no problems
2) Cab 1.2b with the Cab-for-mintnet-117 overlay: wrong colors and
time out errors
3) Cab 1.3 with the 116 overlay: no problems
4) Cab 1.3 with the 117 overlay: wrong colors and time out errors
Conclusion: I think something is wrong with the 117 overlay. That's
really a pitty because to the contrary of the 116 overlay, the 117
version can handle forms.

Hope this will help.
Martin

>having is that F/X will not work for me with 14meg of ram. I have tried
>my 16meg of f/x simms in a 4meg Falcon and it runs like a champ.

She' uses the ram upper 10Mb as EMS?
(I'm nor sure that fx-board can have 16Mb AND Falcon's ST-RAM have 14(16) Mb)

I testet this only with 4Mb ST and 10Mb Fx ram

>Is there anyone out there that has a 14meg Falcon with F/X installed
>and has it working. I know Georg Acher is working on a new version

I don't no. All people in my area still have 4Mb ST and 2,4,8,10,16 Mb FX-Ram.
I think she have a trouble by adressing all her ram.
The only Way is to remove fx-ram down to 8 or 10Mb.

>of F/X1.9 due to its problems. Would like to know if I am the only

She can't use this Driver! It's defective and contains a lot of bugs.
(Also in the Memorymapping, i can't install more than 4Mb Fx-Ram
with 1.9, all more ram will not install or goes to crash quickly.

So she must wait for a new driver-release. 1.91 or so..

>work. I get errors stating that I have the wrong Simms or defective
>simms in bank 1.

That looks like an ram adress-error..

Hi, sometimes this happens to me.

Try disabling STiK, without hanging up modem, and then enabling again...
Strange, but here it works...
Funny thing here is, our universities nameserver doesn't work with Stik.
I had to attach to an other one... Really weird!
Also had lots of problems until I got my first successful connect.
I think StiK's internal login procedure is not 100 % perfect.
Try this out: Start any terminal program, and then activate Stik. Just
configure your dial.scr to dial, no login scripts. After carrier
detection Stik will pause, then login via your terminal program.
This will prevent Stik from going crazy and stop because of unrecognized
login dialogues.

Bye, MC.

The Bill of Rights is an Addendum to the US Constitution.
It outlines certain rights to be retained the people/citizens.
It is the first 10 _amendments_ to the US Constitution with
there being ~26 total.

Obviously this gringo doesn't realize that US != Universe.

The specific amendment he was refering to was the 1st amendment.
Among other things it provides for _freedom of speech_. In american
jurisprudence (the US is still common law btw), it[FoS] is NOT absolute however...

The honest answer is that I don't have a clue!

I've been in touch with Dan Ackerman and he's promised to get STiK creating
the log file needed by CoSTa, but he hasn't said when. :-(

He's obviously very busy with Antmail and PPP support for STiK etc., so it's
just wait and see I'm afraid! As soon as STiK creates a log file, CoSTa will
be updated to support it. I want this feature as much as anyone!

4416. Composite input for SC1224 possible? and other questions

Newsgroup: comp.sys.atari.st
Date: 1996-06-12 00:00:00 UTC
From: megular@grfn.org
Message-ID: <megular-1206962010400001@news.grfn.org>
Source record: 143651

Hi there. I recently bought a couple of SC1224 monitors from "Don's Wacky Atari Sale" (uurgh) under the mistaken impression that they had composite inputs. Is there some kind of external adapter to change a composite signal into something these monitors can handle? If there's nothing ready-made, are there any instructions out there that don't involve opening the monitor to achieve such a purpose? I'm not afraid to solder things, but fooling around with the voltage inside a monitor is not something I'm willing to do.

Next question: How much does a used Falcon with Cubase Audio go for? I'm getting rather tired with my Roland MC-50 sequencer and I thought that I'd like to get a computer that would work well with HD recording (my Mac Color Classic could handle straight MIDI, but not hard-disk recording).

Thanks a bunch,

Edward Barrett

It's a thing that's part of the American Constitution where people can assemble together, talk, print, pray(I'm not making this up), in their own wys without goverment interference. Sadly, it's those like Sinclap who take the 'rights' and abuse them without taking responsiblity. Our Founding Fathers did assume that Americans will have the wisdom to use their rights in the decent fashion, guess they haven't counted on 20th century Democrats and Republicians... :(

This lession in American history has been brought to you by...

A better viewer would be the "Oh Yeah! File Viewer" (oyviewer.lzh on uuae).
It knows how to switch rez as well.

I have MagiCMac, I just bought MAGE which came with GFA Basic. The two GFA disks worked OK, however, the MAGE disks were a problem, it looks like they are in some old format. I could put them in, they would take several minuts to load and open, but all the files where a mess, the directories where false, file names where scrambled and nothing could be exicuted. Any ideas?

Email me,
Zan

4433. New Spectre GCR owner without manuals bugs newsgroup for help yet again

Newsgroup: comp.sys.atari.st
Date: 1996-06-13 00:00:00 UTC
From: dano@ic.net
Message-ID: <4po6d6$aah@condor.ic.net>
Source record: 143518

Hello,

Well, I got everything hooked up and crankin', and a fresh image of the 6.0.5 disks from apple's support site. Anyway, I'm pretty Mac literate so when things got fired up I thought I was fine.

Anyway, "An error has occured" "ID=15" and the restart button are the only things I ever see.

Spectre formatted and tested a floppy no problem. All tests passed, and Spectre started up fine (once I learned that my MegaSTE had better read a DD floppy before trying to use it in MAC mode). Then, Spectre 3.0 started up just fine. But, as soon as I did "About the Finder", I crashed and got the message above.

So, I got into xboot and disabled everything. Clean boot. Nothing but my ICDBOOT.SYS so I get my hard drive. Anyway, this time I do about the finder, and it works! Open the floppy disk, get ready to install, read the readme, and then close the readme. After closing the readme, it says:

The following program is damaged
Finder

(Restart)

and I'm back to where I started. The above results are consistent.

I have tried using ADSCSI.CPX to disable caches, I've tried with and without sound, with and without harddrive, small memory sizes than max, and all other settable options from the GCR startup menu. I've also toggled the "Detect Floppy" option. I just don't know why this is happening, and I don't know what to try next.

Maybe this wasn't such a bargain without the manuals :(

Isn't it a case of registering with the owner, for a small sum, and he
will post the codes to you?
I have these games somewhere, and I remember there is some documentation
giving an address.
I realise it is possible the owner has moved on (I do not know whether
this is the case), but I would urge people not to POST the codes to the
Newsgroups, as if he is still accepting registrations, it would be very
unfair.

They are Atari dealers and an Atari Authorised Repair Centre.
Are UK agents for many Atari Hardware and software products from accross
the world.

I used them some time back for a repair - found them helpful and OK.

They are at Windsor - see their web site at

>>load a program from a floppy, the machine appears to read the floppy OK
>>(I can list all the files) but I do not seem to be able to run any
>>programs (even those which are supposed to auto-execute!).

First, qualify how long your Atari takes to boot. If the desktop takes
the same amount of time to come up irregardless of whether there is a
floppy in the disk drive or not, you have a problem with your disk drive.

What happens when you try to run a program? Does the "busy" light come
on and the floppy start to spin? Do you get a message saying "Data on
drive X is damaged; please confirm that there is a disk and/or check
the cable connection" or words to that effect? Or does the program
start running and then stop?

If you can read what is on the disk but cannot run anything, I would
guess that your floppy drive heads are either misaligned or damaged
(= get another floppy drive), the floppy drive cable is damaged or
has oxidation on the contact points, or you are using the wrong seek
speed (this is especially try if it is an older replacement drive
designed to run at 6ms - Atari's run at 3ms; you can use SuperBoot or
DC's Floppy Configurator to check and set this).

The other problem may oxidation on your chip connections. This problem
is so prevalent that I'm including a text about it.

Problems with floppy drives could be due to many things. Here
are a few suggestions.

Before you start soldering or doing anything drastic, try the
"Lift and Drop" technique. This consists of lifting one end
of your ST about 4-6 inches above the table and dropping it.
Then do the same with the other end. This has the effect of
reseating chips that have undergone "chip creep", i.e.,
that have "wiggled" out of their sockets because of heat
changes, etc.

Obviously, you should do this when you computer is NOT on.
It would also not be a good idea to do this if you have an
internal hard disk unless you remove it first.

Another thing you could try would be DC Format's Floppy Configurator which is available on BBS's and Public Domain disks. This is a small program you can run from the desktop to turn floppy drives on and off, and set seek time for non-standard floppy drives. It comes in handy if you forget to turn on your "B" drive before you boot up.

Hope this helps.

Randy Kwak

hallvart@sn.no□□□ (Hallvard Tangeraas) writes:

>Try `Edith 1.0` which is now freeware.

I know something even better: try Edith V1.221P. It used to be
a commercial package, but it is now free too, except that you are
not allowed to distribute it. Download it from my web pages:

http://www.nl.net/~zfc/index.html

However, it is definitely an order of magnitude more fancy than
Edith 1.0 (250K vs. 70k if I remember the numbers right).

4450. Gemview query (or picture conversion on ST's)

Newsgroup: comp.sys.atari.st
Date: 1996-06-13 00:00:00 UTC
From: iocentre@tcns.co.uk
Message-ID: <ADE5FFFD96687BE5B@du169-167.ins.co.uk>
Source record: 143535

Hi again. A few people kindly suggested that I might be having problems loading JPEGs into Gemview because it had expired. Is there an expiry time coded in? If so I'll just set my system clock back a few years to try it out.

This seems slightly perverse, since I'd only just downloaded it, but never mind. Since I only want to use it to convert .JPG (or .GIF) files into .PI3 files, it seems a little silly to register it only to try it out.

The latest version I can find on Umich is 3.15, but someone said the newest version was 3.16... anyone got any idea where this is? Or can anyone else work out a relatively simple way of moving files onto .PI3?

BTW - I'm using Photoshop at work, so I can convert into pretty much any generic format.

Thanks,

Tim.

>and then close the readme. After closing the readme, it says:
This puzzles me. AFAIK, Spectre wipes most of memory before it starts.
There may be something it keeps, but I don't know what. Thats how he can
fit his program and 3,8+ KB for the Mac into 4MB.
>The following program is damaged
>Finder
>
>(Restart)
>
>and I'm back to where I started. The above results are consistent.
It may be damaged. How did you put it on floppy?
Have you run GCRTEST.PRG? The spectre drive may need diddling. Do you have
a HD 1.44 floppy? There are sometimes problems with it.
>I have tried using ADSCSI.CPX to disable caches, I've tried with and without
>sound, with and without harddrive, small memory sizes than max, and all other
>settable options from the GCR startup menu. I've also toggled the "Detect
>Floppy" option. I just don't know why this is happening, and I don't know
>what to try next.
>
>Maybe this wasn't such a bargain without the manuals :(
BEG,BORROW OR STEAL a manual.
Get Norton 2.0. It works fine with 6.05 and Spectre.
Do you get a Mac screen at all?

The GCR partions written by Spectre on the hard disk aren't perfect. You really need to ERASE the HD inside MAC, to write the dir info and desktop right.

4456. Connecting ST-E to ARC Monitor?

Newsgroup: comp.sys.atari.st
Date: 1996-06-13 00:00:00 UTC
From: Mike Torr <mike@torust.demon.co.uk>
Message-ID: <S5Sb0BA3Y2vxEwlk@torust.demon.co.uk>
Source record: 143541

Hi, hope someone out there knows the answer to this.

My brother has an ST-E and has acquired a monochrome monitor made by
ARC. Can anyone provide a cable spec. to link the two?

Pin-out on Atari 13-pin DIN is as follows:

1 Audio out
2 Composite Video
3 Gen purpose output
4 Monochrome detect
5 Audio in
6 Green
7 Red
8 +12v pullup
9 Horizontal sync
10 Blue
11 Monochrome
12 Vertical sync
13 Ground

The monitor has a six-pin DIN socket which looks like a 240 degree 5-pin
DIN but with an extra pin in the middle. The trouble is, we don't know
the pin-out for this socket.

Can anyone help please? I'd appreciate it, either via news or e-mail

Thanks! :-)

4458. ALGOL 68S Available

Newsgroup: comp.sys.atari.st
Date: 1996-06-13 00:00:00 UTC
From: chl@clw.cs.man.ac.uk
Message-ID: <Dsy55v.IK9@clw.cs.man.ac.uk>
Source record: 143543
Cross-posted to: comp.lang.misc,comp.sys.sun.misc,comp.sys.atari.st,comp.sys.acorn.misc,uk.comp.misc

```
ALGOL 68S System
----------------

I announce the availability of a compilation system for ALGOL 68S on the
following platforms.

Sun3
Sun Sparc (under SUNOS 4.1)
Sun SParc (under Solaris 2)
Atari ST (under GENDOS)
Acorn Archimedes (under RISCOS)

They may all be downloaded from
ftp://ftp.cs.man.ac.uk/pub/chl/A68S
The system is written using the Amsterdam Compiler Kit (ACK), so some parts
of it are copyright by the Vrije Universiteit, Amsterdam, and the remainder
by myself. Please see the Copyright Notice in the share directory.

The language implemented is most of ALGOL 68 (including virtually the whole
of the official sublanguage). The implementation is pedantic rather than
fast. See the documentation for full information.

The Sun3 and Atari versions are essentially frozen (but believed to be
reliable). I would expect to be able to fix problems in the others as they
arise. The system could in principle be run on any UNIX system for which the
ACK provides a backend and, in particular, I would be willing to go for a
Linux version if someone can offer me facilities to test it.

If you do download and install the system, please let me know. It would be
nice to know who is using it and, in addition, you will get on my mailing
list for any updates in the future.

4459. Help? Sampling woes...

Newsgroup: comp.sys.atari.st
Date: 1996-06-13 00:00:00 UTC
From: sebab@ucla.edu
Message-ID: <sebab-1306960206280001@ts24-6.wla.ts.ucla.edu>
Source record: 143544

Hi!

I've been trying to sample from my Alesis Quadrasynth using my Falcon, and I'm finding it impossible to get clean samples. I'm going to describe what it is I'm doing...if anyone sees an obvious blunder, please, PLEASE *PLEASE* mail me. I'm pretty desperate at this point, as in the MODs are done, with some noisy placeholder samples which I need badly to replace.

I hook the synth up to the falcon: audio jack -> RCA cable -> attenuator -> Falcon.
I've also tried this without the attenuator, and actually without sounds better (!?)

Then I sample using FalcD2D, adjusting the volume on the synth (and also, during various attempts, the input and volume in the program itself). the result is a very clean sample in the left channel but filthy in the right (assessed by covering up half of my pair of headphones)

Then I take the sample and convert it to an 8-bit mono one using 525E. The sample still sounds yucky, so I use a homemade program (written by a friend, who seems to be able to get sampling to work) to strip out the right (noisy) channel.

The result of all this is a a still rather noisy sample, though it sounds better than before the right channel was removed. Can anyone think of something to try?

P.S. I know I can get samples off the net, but I need some specific chords which I have not yet found elsewhere.

P.P.S. Yes, I *have* to use 8-bit samples; the game engine into which these MODs go requires this.

P.P.S. Why don't I get my friend who wrote the program to sample from my synth?
Well, he lives in upstate NY and I live in LA...

P.P.P.S. Do I sound frustrated just a tad??? Aaaaaaaargh.

Thanks for any help.

Funny thing with the game was that who was the real person and who was the game???? hehhe I remember a few times he would walk over and look straight at you and sort of know on the monitor glass like a window and talk to you....Like he was asking what you wanted . The game was sort of like the same idea as an ant farm or doll house. just something for you to play with nothing better to do..

I tried to get one of the more up to date mac systems installed as I had
6.0.5 running at the time! I ran into the same problem! the programs from
Apple that make the files you down load from them into disk that you can
install from are picky! I don't remember the names now but one only runs
on the original Macintosh computer, not a plus. The other one which is
more recent only works uder system 7.0 or higher! Had to go over a
freinds house to use a shareware program of his to make the install
disks on his Mac!!! I don't think Apple likes Spectre users!

The problem is that ICD uses a method of partitioning that Magic 4 doesn't
like. You need to partition with 'AHDI compatibility' turned on.

From: jake.goerzen@dinuba.com
Message-ID: <8C273F6.0363004F3C.uuout@dinuba.com>
Source record: 143555

Hey Mike!

How's your new MK-X doing? I'm still here in Dinuba/Reedley. It sure does seem like TOS users are few and far between in California. Hey, are you using STiK/CAB to connect to ValleyNet? I assume they have SLIP access. If so, I'll have to get an account with them. My current ISP only has PPP :-(I gotta use an office pentium to use it. With my MegaST I only have access to internet E-mail, through MicroLink BBS. But this will change soon. I'll find an ISP w/SLIP.

Jake
jake.goerzen@dinuba.com

From: Ari <ari@walrus.com>
Message-ID: <31C0E2C6.3028@walrus.com>
Source record: 143559

The MAGE comes with disks that were formatted using a non-DOS compatible format. For example, I can't read them using PC-Exchange on my Mac at work.

You might want to try to back them up on a PC and then run the program ST2DOS.EXE (you need a PC) to convert their boot sectors.

Good luck with the MAGE - its cool but TOTALLY unsupported.

Ari

A local computer shop has thirty pin 1 meg chips with three chips on them for $20. Are these usable in an Atari? Mostly I have heard people refer to 8 or 9 chip chips. Slightly redundant but I hiope you understand. My two STE's both have 2 megs of 8 chip simms. Are the number of pins (30) most important here?

I don't believe it is hard-coded, it should begin to expire about 30
days after installation so I suspect some other fault but I can't
really know without looking at your setup, sorry.

>The latest version I can find on Umich is 3.15, but someone said the newest

> it as some others have mentioned that they have done!
>

Mainly the power supply, but also the 68000 (which, at least in my MSTe, is a 12MHz 68000 being overclocked at 16MHz). Even a small airflow can make a big difference in temperature. Things get very hot if you disconnect the fan. If you don't have an internal hard disk, you may be O.K., but even so, you are probably reducing the life expectancy.

You need the Mac ROMs from a Mac 512 or better. In my neck of the woods, you can pick up a dead Mac 512 or MacPlus for next to free. All you have to do then is get the 2 ROMs from the dead machine.

Try contacting your local Mac user group. They may have some dead Macs on hand for parts or know where you could get some.

You jest, surely? Making sense of C is hard enough at the best of
times, but as a subset of Algol (even Algol W!) - my mind refuses to
admit the possibility! And I speak as someone who has written tens
of thousands of lines of various Algols and C (mainly ANSI) :-)

Regarding C as a perversion of BCPL while under the influence of PL/360,
now THAT I could swallow :-)

>who can understand Pascal and its derivatives only as perverted and

4489. New C-Kermit for Atari ST

Newsgroup: comp.sys.atari.st
Date: 1996-06-14 00:00:00 UTC
From: fdc@watsun.cc.columbia.edu
Message-ID: <4psfo8$qjg@apakabar.cc.columbia.edu>
Source record: 143462

Hello Atari ST people. I am preparing a major new release of C-Kermit communications software, 6.0.192, for UNIX, VMS, Amiga, etc. Previous versions of C-Kermit also supported the Atari ST, but the volunteer programmer who took care of the ST aspects has retired.

Would anybody care to volunteer to take his place? All that's needed is to get the latest source code, compile it, fix any compilation errors, test it, upload the binary to the Kermit site, etc, a few times until the Beta period is over, and then produce a final binary.

You'll need a C compiler. If you're interested, please reply by email to fdc@columbia.edu.

Thanks!

- Frank

> sure we both would like to Know?

Chimera would _replace_ CAB, and requires Xwindow on MiNT/MiNTnet. Up to
now there is no way to do PPP apart from MiNT/MiNTnet. So if you go as
far as installing MiNT/MiNTnet for PPP, why not use CAB again ? You need
the MiNTnet version of CAB.OVL though. Let archie look for
cab_for_mintnet*

Cheers Peter

> are not aware or simply ignore a lot of interesting facts:

Strangely, those last two sentences are also quite a good
summary of the Algol culture.

> For example, today you can have a free Ada95 compiler for
> any platform from GNU, which even runs multitasking under DOS.

The merits of Ada are irrelevant to this discussion. I agree
completely with Jeroen that it is important that old languages should
survive for reasons completely separate from their objective merits as
languages in which to write modern programs. Charles Lindsey is to be
commended for his efforts.

Ada, in particular, should not be considered as *any* sort of
successor to Algol 68; it was founded in a conscious rejection of
Algol 68 in favour of Pascal. That the evolution has somewhat converged
makes it more, rather than less, important that the histories should be
remembered.

> I doubt that there are people who will waste their time with
> a language which is 30 years behind.

Firstly, the 68S sublanguage is based on the 1975 revision of
Algol, so it is at worst 21 years behind.

Secondly, it contains many features which were decades ahead
of the rest of the world, including the treatment of arrays, of
procedures, of storage allocation, of parallel processing, of syntax
description, of the type system, etc. If Ada, or any other language,
is now catching up, and even perhaps going ahead in some areas, that's
good, but it doesn't make Algol even 20, let alone 30, years out of date.

Thirdly, there is a subject called "History of Computing", in
which Algol will certainly have a key role, no matter how many or how
few people use it today. If it doesn't interest you, that's fine; if
it doesn't interest the millions of users who write in Basic and the
hundreds of millions who are concerned only with playing games on their
PCs, that's fine too; but there are still some people, even *young*

people, who like to know how the subject developed, and what we were doing in the swinging sixties.

Fourthly, you are in any case wrong. There are still some people who *understand* Algol and its model of computing; who can make sense of C [for example] only as a restricted subset of Algol; who can understand Pascal and its derivatives only as perverted and even wrong subsets of Algol; and who cannot make sense of some modern languages at all, because every book they read about them is trying to promote some message about the way computing "has" to be in the "modern" world that they know to be wrong. I *know* there are such people, because I am one of them.

>
> This chip should be the WD1772PH-02-02. Isn't this chip called 'Ajax'?

Yes and no. There have been thousands of upgrade tips using the WD1772-02-02.
This chip is rated for 8 MHz (you need 16 MHz) by Western Digital, and
DOES NOT work reliably with 16 MHz. At first it seems to work, but
occasionly you have trouble, and you'll be never sure that you saved your
data securely. Do NOT believe the guys who wanna tell you that this chip
is enough !! The Ajax, however is a redesigned version of the WD1772, and
should be used for HD oparation. Only the Ajax is rated for 16 MHz.

> I am looking for such a chip to upgrade my A3000 (yes, an Acorn machine, I'm sorry ;) to HD floppy. I've got the schematics, just not the chip.
> It is still available at some stores but at rediculous prices, i.e. well over 40GPB.

I purchased one for DM 50,-, and found out that it had been desoldered
from some board. However, I can't recall where I got it.

Hi there:

I'm just motivated to buy a Iomega Zip drive, they're SCSI and
the output port is an SCSI-2, the same as my Falcon!!!, so it might be an
excellent upgrade, now:

1).- Does anyone have tried using it with Cubase Audio? (I know
it shouldn't be a problem since the transfer speed is 10 MB/s.)

2).- Do I have to format to Atari format? or just use the one
that comes with it? they sell Mac and Pc versions, the dealer didn't know
about a diference in format.

3).- Will my files (ex: GIF, JPG, AIFF, etc) be compatible with other
computer platforms? (this is actually in relation to the formatting),
unplug here, plug there and go...

4).- Where can I get the cheapest price on these drives, It's
nice to have 1 GB at a time!!

Regards!

Carl,

The first batch of MegaSTes shipped with TOS 2.05, DD disks and no FPU - I know because, I bought one! I, too, expected all the goodies but have had to upgrade my machine to the full spec.

You will need to change the disk controller for Ajax and get an HD to replace the DD - try Toad Computers - that's where I got mine; they had *official* Atari upgrades with the Ajax chip.

For TOS 2.06 - try The Upgrade Shop.

For 68881 FPU - try Best Electronics - although mine didn't work and I haven't had a chance to take it to SysSol to ask them to check it out; apparently some early MegaSTes had a track missing which switched the FPU on!

Hope this is of some use, if a little disheartening!

I disagree - IMHO Ada doesn't have the importance to language design or computer science that Algol 68 has - as others have mentioned in this thread it was a very innovative language with ideas that proved to be both good and bad.

Ada is an interesting language which I happen to like, but I think in the final analysis it won't be regarded as a being of fundamental importance to CS history in the same way as some other languages are - both before and since Ada arrived.

> The Ada culture is widely misunderstood because of prejudices.
> People often judge on the basis of misconceptions and therefore
> are not aware or simply ignore a lot of interesting facts:

Life's full prejudices.

> For example, today you can have a free Ada95 compiler for
> any platform from GNU, which even runs multitasking under DOS.

GNAT is a great effort - unfortunately it doesn't quite compile our Ada code (yet - I hope it does one day).

> I doubt that there are people who will waste their time with
> a language which is 30 years behind.

In the commercial environment this is exactly what a lot of people do - developing, enhancing and maintaining systems built using programming languages that are essentially 20, 30 or even nearly 40 years old (but admittedly that have been spruced up a few times...).

As said earlier in the thread - Algol 68 is an important language in the history of computer science and is worth knowing.

I'd like to use my Super Charger to run some simple dos
programs that use a midi port. Does anyone know if a driver
exists that will link the atari midi ports up with dos?

One program in particular I'm trying to run is called sdx.
It simply reads sds sample formats and sends them via midi.
There is an option in the program that allows you to change
the hex address for the midi port. Anyone know what this should
be on a supercharger? Might this work without a special midi
driver that loads under dos?

>run Cab on a PPP connection. He has suggested Chimera. Is this best? I'm
>sure we both would like to Know?
>
>
Yes and no. I have them both working on my TT.

Take the following just for what it's worth.
The negative points of Chimera are:
****
1) AFAIK I doesn't run in color
2) You can't read JPEG pictures
3) Chimera needs at least 4mb memory. The manual says that one can
run chimera with a 4 mb ST but that's a little bit too optimistic
I think. Sure it runs but if you try to read pages with lots of
graphics you'll surely run into big trouble.
4) Save pages doesn't work (at least on my computer)
5) Downloading things by FTP doesn't work either (I can't)

The strong points of Chimera are:
****
1) It's displays more non-standard pages than CAB actualy can
2) As part of the TAF-package, Chimera is very easy to install. Just
follow the install doc.

Now CAB

Negative points:
****
1) There lots of pages that Cab can't handle
2) It can't display JPEG pictures online (as yet)

Strong points:
****
1) Cab/mint/mintnet is very stable
2) It runs in all resolutions
3) The lastest version can handle forms and mailto (not sure of that,
I haven't try it myself)
4) It's fully multitasking. You can easily run Cab and while
downloading a page doing something else
5) It's currently still under development. It's getting better every

day
6) There are some more strong points but I can't remember me these
right now

If you can see your questions isn't easily be answered. If you've
plenty of space on your harddisk and a TT or Falcon I should say use
them both. If you only have a 8 or 16 mHz machine then go for CAB.

BTW: AFAIK the programmer of STIK is working on a ppp version of STIK

Source record: 143481

OI!

I've had a 1040STe (w/4megs & hard disk) running calaumus 1.09n for some time now and it works well except for one fatal problem. When I print anything longer than one page on my Canon BJ-200E printer, the printer only works well on the first page, after that it screws up every time! The printer won't eject the paper at the end of the page so I have to pull it out, hence on printing the second and consequent pages the paper is not fed to the print head until after printing of that page begins so the top of each page (after the first) is cut off. Since I need this computer for work and 95% of my output goes through calamus I desparately need a solution before I throw this system in the junk heap to make room for a useless (and hated) dosboxen.

4511. Falcon 030/Floppy Drive/Replace

Newsgroup: comp.sys.atari.st
Date: 1996-06-14 00:00:00 UTC
From: ekr@efn.org
Message-ID: <4pt3pn$1ie@garcia.efn.org>
Source record: 143484

Hello everyone,

I need to replace the Floppy Drive in my Falcon. My manual says
that I have a 1.44MB PC-compatible internal floppy diskette drive. Does
this mean that I can use a floppy drive designed for a PC clone? In
theory, it seems it would be alot cheaper to replace if I could. Any
suggestions would be appreciated.

Thanks,

Kevin Rogers

4512. Looking for Atari 7800 digital signature algorithm

Newsgroup: comp.sys.atari.st
Date: 1996-06-14 00:00:00 UTC
From: btomlin@crl.com
Message-ID: <4pt5jl$ojv@crl14.crl.com>
Source record: 143485
Cross-posted to: comp.sys.atari,comp.sys.atari.8-bit,comp.sys.atari.st

I'm looking for the digital signature algorithm needed to make usable Atari 7800 cartridges. I've heard a version of it ran on the Atari ST.

I have reverse-engineered the digital signature verification inside the Atari 7800 itself, and it looks like one of those wonderful "product of two primes" algorithms... with a 960-bit key!

If anyone knows anything, I would be very interested in either the prime factors or a uuencoded copy of the program itself from which I can extract them, so that I can make a program to generate the signature for any given cartridge image.

I already have the 7800 side of the algorithm implemented in Turbo Pascal (check out rec.games.video.classic if you want to see it), and it would be easy to add the signature generator... IF I had the prime factors.

4513. Re: Tatung Monitor DEAD 8(

Message-ID: <550408985.82082.48.starship@3rdplanet.com>
Source record: 143486

SSweet@mettav.demon.co.uk barked in U.COMP.SYS.ATARI.ST on 14 Jun 96:

S> If its a Tatung 'D' chassis, then the o/1 switch is U/S, can you check it
S> for continuity, its a double pole switch, and so you should get a
S> s/circuit read across each pair of pins (at right angles to the axis of
S> the pusher)

Hmmm, I can figure out that "o/1" means power or on/off, and "s/circuit"
would be a short (e.g., continuity), but what is "U/S"?

a> trying to promote some message about the way computing "has" to be in
a> the "modern" world that they know to be wrong. I *know* there are
a> such people, because I am one of them.

You, Sir, are a recidivist!

I /adore/ that in a programmer! <G> My first program was a full-graphics screen dump that had to fit and run in 1800 bytes, including the loader. I can't even _find_ a full-graphics screen dump for MicroSlop Windozzzzze, but if I could, I bet it would take 2 or 3 megs of memory. Algol and its ilk were designed by programmers for programmers - that is, people who believed that an elegant solution was both small and fast. I'm glad to see that the rest of the people I admired so long ago aren't all dead.

And, may I add in a gratuitous attack on Ada lovers: Dr. Jerry Pournelle was a member of the Ada design committee. At the end of the project, he made a statement to the effect that, if Ada was ever used to program American ICBM targeting systems, Americans had better take immediate, deep shelter. The language tries to be all things to all people, and ends up with more bugs than a New York City garbage scow.

GCR treats all SCSI devices as big floppy disks and tries to write a desktop file on any disk that is mounted if it doesn't find one. This may

be part of the problem with CD-ROMs and Spectre. Other than that, I don't know, I'll have to give it a try and see what happens.

Something that I forgot in my previous reply is that in order to mount
my NEC CD-ROM I have to use the CDEV or INIT(or whatever it is) from NEC
at bootup. I seem to recall that it would not run on Spectre.

4518. Cab_jpeg.ovl size?

Newsgroup: comp.sys.atari.st
Date: 1996-06-14 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <834865116_OASIS_@husbands.demon.co.uk>
Source record: 143491

Another unconnected thread posed the unanswered (or un-noticed) question about the size of cab_jpeg.ovl contained in the www131 package. The size of the file is 22532 bytes, whereas the previous one I was using was 70081 bytes.

Did I miss something, or has the program been streamlined to perfection?

------------------------------------------------------------------------
SWEDISH ATARI USERS' ASSOCIATION (Svenska Atariklubben)
IN COOPERATION WITH NoCrew PRESENTS

-* THE NORDIC ATARI SHOW AND CONVENTION 1996 *-

WITH CONVENTION, EXHIBITION, SEMINARS,
DEMONSTRATIONS, CONTESTS ... AND MORE!

AT KORTEDALA GYMNASIUM IN GOTHENBURG, SWEDEN
ON THE 14th, 15th and 16th OF JUNE
------------------------------------------------------------------------
NOTE: The information in this text is not complete! Updates will come.

PRESENTATION

NAS was first arranged in 1995. It's a special show with a hacker convent,
exhibition and different seminars - all in one place.

This time the Nordic Atari Show is held in a school building, Kortedala
Gymnasium, in Gothenburg. It offers several small rooms for the hacker
contests and seminars, a big lecture hall for showing demos and films and a
normal size restaurant for the exhibition. Showers and dressing rooms are
available, and there is free carparking in the school area.

Pizza restaurant, cafe and other shops are only a few steps away from the
school. If you want to stay at a hotel please contact us for information
or visit our Webpage for details (http://www.tripnet.se/sak/nas).

Kortedala Gymnasium is fifteen to twenty minutes away from the central part
of Gothenburg. There are good possibilities for communications by tram or
car.

The dates are the 14th, 15th and 16th of June. Gather with your friends and
join us at a very fun and exciting show for Atari users around the northern
and european part of the world!

This year the exhibition and seminars are arranged by the Swedish Atari
Users' Association (Svenska Atariklubben), and the hacker convent by
NoCrew.

Below are all the activities, and the low entrance prices. Last year they
were a little bit high, but this year we hope it's suitable for all
wallets!

THE ACTIVITIES

For more detailed information see below.
```

exhibition
retailers and different associations will be there

hacker convent
competitions for FALCON, STE, ST and 8-bit

demonstrations
Jaguar, Lynx, MiNT, MagiC, Linux, DTP, Internet etc

seminars
about programming, Internet, multitasking etc

others
competitions for the non-programming experienced
(lottery, MidiMaze-contest, harddisk throwing, CocaCola-drinking etc)

THE PRICES

type payment SAK-member non-member

3-day entry prepaid SEK 100 SEK 125
3-day entry at the door SEK 125 SEK 150
1-day entry at the door SEK 50 SEK 75

The T-shirt is gasping yellow with a fine black print. Highest quality.
Don't miss this fantastic offer. Limited quantity.

T-shirt prepaid SEK 75 SEK 90
T-shirt at the door SEK 100 SEK 120

A cafeteria with low prices on CocaCola, Jolt, sandwiches, buns and
other tasty products will of course be available.

If you live in Sweden, you can order your tickets to NAS96 via
our Webpage at http://www.tripnet.se/sak/nas

Otherwise, if you live outside Sweden or don't have WWW access, and want to
order tickets to a lower price, please pay the right amount of money to our
Swedish postal giro account

nr 73 69 10 - 1

before the 31st of May 1996. Don't forget to state your name, address,
country, telephone, fax, email address and SAK membership nr so that we
know who's paying.

THE EXHIBITION

The exhibition will be open on the following times:

Friday 14th 12:00 -- 21:00
Saturday 15th 09:00 -- 21:00
Sunday 16th 09:00 -- 16:00

If you and your company or organisation wants to join the exhibition, then
estimate the space you need and pay the fee to us. We offer you different
sizes (measurements in Swedish meters) depending on your needs.

4,5 m2 costs 500 SEK
9,0 m2 costs 1000 SEK
18,0 m2 costs 2000 SEK

If you want more space, then every extra m2 is 150 SEK. Please contact us first to get further information.

The retailer's fee includes full entrance for two persons.

Nonprofit organisations can join the exhibition for free (with a space of 4,5 m2). This includes full entrance for one person.

Please pay at our Swedish postal giro account,

nr 73 69 10 - 1

before the 31st of May 1996.

State your company/organisation name, address, country, telephone, fax, email address, contact person and space needed. If you'd like to speak at a seminar about something, then tell us about it.

THE DEMONSTRATIONS

More will be added as soon as we get to know about them.

BBS We'll be showing STraight BBS, with products as Semper, LED, Octopus etc. Sysop Bertil Jagard will be answering questions and demonstrate different situations, as well as speaking about ethics and problems with communicating.

MagiC What is MagiC? What is multitasking? Find out by using MagiC 4, and swapping between those programs. Learn about problems and get tips from experienced users.

Making How can magazines be made with Calamus SL? We'll be showing how magazines the Swedish Atari Users' Association (Svenska Atariklubbens) with SL magazine "AtariMagasinet" is made. Tips, problems, features and possibility to make yourself some visit cards or other things to take home.

THE SEMINARS

More will be added as soon as we get to know about them.

Internet What is Internet and how can I use it with my Atari? Experienced administrators will be talking about Internet - history, how it's made, the future and more. We'll put it in reality too, with products for Atari computers that all of us can use - easy!

THE CONVENTION

NOTE: This is preliminary information. Updates will come.

Which computer? Atari in all forms. We want the hackers and the democoders. The Linux freaks. The MiNT people. The Jaguar nuts and everyone else that uses Atari in some form.

Demo contests

BIG ONE
No limit at all. Should be able to run on a Atari compatible computer
present on NAS96.

SMALL ONE
The limit is the shoesize squared (european) of the deliverer in bytes.

World cup in alfabutton

We will try to break the world record in typing a to z on a standard
keyboard. So far, way below two seconds. Go practise...

Films and demos

We will alternate between showing films and old demos on our big
screen projectors. Of course newer ones as well.

Prices

They will most certainly show up and be of good quality.
More info to come.

More information is available from larkov@tripnet.se, or visit NoCrew's
homepage at http://www.dd.chalmers.se/~f93labr/nocrew/index.html

Have you tried running samconfig.acc, going to the Play/Record area, and =

changing the sign (+/-) and then playing it? If it sounds OK you could =

then save it as an *.avr or *.wav file. Sometimes this works for me with =

a sample(*.raw)
good luck.bonne chance

What is the need to learn Latin these days (apart from the medical world, where you can't do without it)? For me it helped a lot in learning other languages.

It is similar with Algol-68 (mind the 68 versus 60). It is a very rich language, not in terms of bells and whistles, but in programming language concepts. For everybody learning programming languages I strongly recommend to start with Pascal, move on to Algol-68, take a different turn to e.g. LISP before ever touching on Ada.

Anyone interested in formal specifications (of programming languages) should study Algol-68 syntax. It is the best example of a two-level grammar that I know of.

I would think trice before recommending Algol-68 for business purposes as I would only twice with Ada, I give you that.

Ed

I have recently acquired a 520ST, unfortunately it is sans power supply, hard drive and monitor. I can build a power suppy easily enough, but I need to know the pinout of the connector as well as the voltage/current requirements. I would also appreciate any info on connecting a regular VGA monitor to the Atari, as well as any info on using IDE or SCSI drives with this unit. I haven't been able to find any info on the power supply on the net, and only limited info on the other two items. Can anybody help? Or at least point me in the right direction. Any help would be appreciated. Thanks in advance.

> Sorry if I brough bad news to you.

Hmm. Yes, reformatting a drive isn't for the casual user, but I reformat
drives all the time. SCSI and IDE. It's a fairly trivial exercise that
requires a little knowledge, and some time.

I don't think your dealer is telling you the truth. If it's a properly
made IDE drive, you shouldn't be able to hurt it with a low-level format.
In fact, a low-level format is occasionally _required_ to deal with the
odd, irritating conditions that HDs can fall prey to.

Find someone else local to you who knows a lot about HDs, and ask them to
give you the facts, okay?

s> and first impressions last.

Uhh yeah. The problem with IRC was that I let my brother have access to my account. I've apologised to the people who he upset numerous times and I've since refrained from going on IRC as a token of good will. Apparently I've been banned from #atari along with the rest of my college. This I find quite distressing but there is nothing I can do. It was after all my own fault.

s> If you want to contine this any further please do it by mail I only
s> replied here in the first place because this is where you asked.

Sure thing but I felt I had to set the record straight in public.
I'm an avid fan of the atari and a great supporter of stik. I will continue to support stik authors and beta test the programs that I do.

I deeply regret the events of the last few months. I hope those people who have been affected will find it in their hearts to forgive me for a lapse of security.

Yours

MJW> Please forgive my ignorance concerning Atari's but I have just
MJW> obtained an Atari 1040ST second hand which seems to boot up fine,
MJW> displaying the usual start-up screen with two disks and trash bin,
MJW> but when I try to load a program from a floppy, the machine appears
MJW> to read the floppy OK (I can list all the files) but I do not seem to
MJW> be able to run any programs (even those which are supposed to auto-
MJW> execute!).

I would suspect that you only have a single sided drive, try formating a disk
and see what the maximum capacity is that you can attain. It should be
720k'ish if you can only get 360k the youre a singel sided drive owner.

Alternativley maybe the desktop.inf file on that particular disk is
corrupted, try booting without a floppy in the drive, when the desktop comes
up try to execute a .PRG and tell me what you get.

c> suspect there is an incompatibility between it and ICDBOOT. Has
c> anyone experienced this kind of problem?
I couldn't get MagiC to run at all until I upgraded my hard disk driver (HDDriver) from v3.50, so it could be that your driver isn't compatible with MagiC?

There are demo versions of HDDriver around if you want to try it first (I don't have any ftp adresses tho', sorry)

There are so many more ways of sending a file, and I had the same trouble with binhex. Good old uuencode should do the trick. ESSCODE will do the decoding, a GEM prog so very easy to use and no need to edit the file before hand just compile all the different parts (with/out header info) and watch it decode.

Have an HP 600 hooked up to my F030 atm and it performs very well. Pity
about no having the full 600dpi option like I can on the PC though.
I have NVDI4, are there drivers for the 600 around? Great print quality
from Papyrus and pagestream using HP500 though. Even the Laserjet drivers
work well.

No need for SpeedoGDOS with NVDI4 btw. Does the same job but better and
alot lot faster. You're right and made a good point, WP and DTP software
come with their own drivers but as in the case of Papyrus you have the
option of using NVDIs drivers aswell. Makes it very compatible. You can
print out a document as an IMG file aswell for say using with a FAX program
like Junior office. I forgot whether it's the Papyrus or NVDI drivers but
I can output the document in exactly 196dpi for Junior office to send. I
haven't sent a FAX like this before but for high quality FAXs it's worth
knowing.

>
> Can anyone make any comparisons between MagicPC (as it appears to be now)
>and gemulator. I myself am interested in the Laptop version (I have enough cards
>as it is).
>

There is NO comparison between Gemulator For Laptops and MagiC PC. One is written in highly optimized assembly language, the other in quickly whipped together C. That is why the MagiC PC demo is so slow and unusable. Keep in mind that Gemulator has been in development for the last 5 years (and on sale commerically for the last 4) so it is a much better product. See the Gemulator web page at http://www.halcyon.com/brasoft for complete product info.

Note: the MagiC PC demo, as with STonX and other cheap rip offs of Gemulator, LIES about benchmark results. The 200 Hz system timer, which is used by Quick Index, GEM Bench, and other Atari ST benchmarking utilities, is incorrectly emulated on MagiC PC and STonX, at a much lower frequency than 200Hz, giving the illusion that benchmark results are 2 or 3 times faster than they really are. If you use a stopwatch and time the results by hand you'll see the trickery. Gemulator has always accurately emulated the 200 Hz timer and gives valid results.

The MagiC PC documentation claims that the speed of MagiC PC is roughly the speed of an Atari TT on a 100 MHz Pentium. Not even close! It is roughly 3 times slower than the claim. I've tried it myself with a real TT to compare with, and their claims are utterly bogus.

Don't be discouraged by these lame rip off emulators. Why do you think they're free! :-)

I'll be demonstrating the Gemulator (and Gemulator For Laptops) on July 13th at the annual Indianapolis Atarifest so if you happen to live in the Chicago or Indy area, come to the show and I'll show you a real Atari ST emulator running on a real notebook computer running real Atari

ST software at real Atari TT speeds. For half the price of the other guys as always.

I have used the Gemulator for a few years now. It works really well
and will run all well behaved programs. I think it is an excellent
product. You also get excellent support etc from Branch Always.
It will not run programs that use disks with copy protection on them,
which is usually games.

Branch Always, the makers of Gemulator, can be found at the site
below.

There are indeed some (few) IDE drives that mustn't be formatted. Otherwise
these drives will be damaged. This might be due to firmware bugs (at least
such a drive should not allow to be reformatted). But whatever the reason
for this behavior, damaging IDE (not SCSI) drives when formatting them is
possible.

>I hope that someone can tell me where the screws are hiding, and any other
>tips/tricks for getting the case apart so that I can fix the cable.

Start with removing the 2 screws of the portfolio bus connector. Then
turn the portfolio upside down and remove the 2 rubber strips. The
screws are behind these strips. Now yow can open the bottom case, it
works like a door.

The screen is much harder to open. The screen is covered by a plastic
top cover. You have to lift this cover up with a very small screw
driver in the left and right under corners. You will find the screws
behind it.

Good luck !

Wilfred Kilwinger

Are you looking for a HPGL file reader (HP Graphics Language)?

I have not seen one of these for the ST.

Many PC & MAC solutions exits & these can convert the files to an ST file
format (like PI?).

Cross-posted to: comp.lang.misc,comp.sys.sun.misc,comp.sys.atari.st,comp.sys.acorn.misc,uk.comp.misc

Upon Charles Lindsey's announcement of

>> the availability of a compilation system for ALGOL 68S

Peter Hermann questioned the need for it:

>Could you please explain us the need of Algol in the time of Ada95?

There are other reasons than direct practical useability
that make a compiler interesting.
Algol68 has had a large influence on thinking about programming
languages. There were great new ideas (e.g. orthogonal type system,
functions as types, parallelism primitives), and also some features
that appear to be a bad choice in hindsight (e.g. coercions depending on
subtle context rules, complicated IO formatting).

To still have a compiler around is of historical, educational,
and, yes, *cultural* importance.

Although I have access to none of the platforms listed, I am
pleased by Charles Lindsey's initiative.

Well, although I would clearly prefer Ada 95 to Algol 68 for any _practical_
programming project, Algol 68 is an important step in the history of
programming languages. It introduced and combined many features, some of them
survived, while others (e.g., the high degree of orthogonality in Algol 68)
disappeared. So, Algol is at least interesting for people being interested
in programming languages design.

Texdraw2 has an HPGL import function and will export in various flavours of
TeXie and GEM formats. It's a bit of hacking around but it will work. MSword
will also read HPGL (but it's PC stuff of course).

Hope this helps...

Did you try increasing the allocmem size in the default.cfg to 128000 or
higher? If not, then do try that, and while you are there, verify all ip
addresses. If that does not fix it, then email me with your config and I will
try to help you. -glen-

I am in the process of setting up an Internet Service Provider here and may be
able to shed some light on your problem. I would be willing to bet that the
nameserver at uni uses the NIS resolving protocol instead of DNS protocol. As
far as I know, nothing on the Atari will support it. I am not even sure of
anything on any other platofrm other than UNIX supports it. -glen-

You can't use Diskcopy to copy a system disk image to floopy on the ST
because the mac wants a 'super-drive'. There is a DA called 'Mount Image'
that treats the disk image as a virtual drive. You can open the drive
and copy the files to a floopy.

Done that... however AFAIR that only Kills/Ignores email, and not the
usenet news that SinClap seems to insist on using.

Thanks

Unfortuanatly I stick to Usenet these days, so unless you coded the
program in GFA and would allow me to have a look and write a GFA
version... thanks but I wouldn't be able to use it !

Thanks for your help !

AFAIK 14.4K is not possible, however 19.2K IS !!

Set your modem port to 19.2K, and leave your modem as it is. If all
is well then the modem and computer will talk fine. However you need
to check that flow control works on your TOS (use HSMODEM to fix it).

Otherwise your computer will send stuff to the modem too fast, and the
modem will scream at the computer 'STOP' and the computer will ignore
this and carry on sending stuff... eventually the modem will shout
'I'VE HAD ENOUGH' and disconnect ! ;-)

Hi: You can find it at Toad Computers news and FTP at:

http://www.toad.net/

I tried on a 586 IBM 100 mHz and I run a couple of Atari progrms besides the demos. Calamus loaded but
I got a message saying that it would not run on that TOS version.
The other programs in cluded an award program run great and fast.

4578. HELP: A bad FALCON problem

Newsgroup: comp.sys.atari.st
Date: 1996-06-15 00:00:00 UTC
From: istvan@innet.be
Message-ID: <4pv578$ncb@news.be.innet.net>
Source record: 143420

Hye!

While running Cubase Audio on a 4meg Falcon I all of a sudden had a
jumbled directory window when saving. I just reset the computer and I
got 2 bombs.

When all boot drivers and .acc's were removed I could boot from HD.
Running other software then allways yields TOS error #35.
If I activate a single boot.prg or .acc - 2 #@$!$ bombs.

So, I tried:
without any HD, the ahdi.sys (whatever) and any other sys removed.
-withouut ide, booting from scsi- same
-without scsi, -same

From the floppy seems to work fine.

Particularly interesting:
Cubase runs, although veeeeery slow, even with sync set at internal!
But when the FDI is taken off, it runs on normal tempo.

HARDWARE: Falcon; 4m ram
50Mb ide(cdef)
540Mb quantum scsi2
2*1Gb Quantum Sonic Solutions SCSI
Soundpool FDI
,, MO4
Screenblaster 'ext', SbIII software, Eizo 6500 21" mono mon.

That's it...

I'm in a big problem because of this. And I live unfortunately rather
far from technical help. The guys from the place I got it are in the
dark about this one.

Is this a hardware problem?

I don't have to stipulate that ANY tip will be met by enormous
gratitude...

Greets, Istvan

> That's true anyway: anything that's free is shitty.
>gcc? emacs? etc. All are useless!

I think the main point here is that HARDWARE is faster. The
Gemulator is a hardware/software combination. The amount of
processing power you get out of a Pentium trying to emulate a
680xx in software is obviously much slower than a real 680xx.

I don't think it's too far fetched to say that you get 10-15%
performance compared to a 68020, which I presume the Gemulator
is.

b>
b> Thanks,
b>
b> Bill
b>
b> PS__ I am posting this on comp.sys.atari.st, hoping that some of the
b> others with long signatures will take a hint.

We had this discussion in the fidonet echo, ATARI_ST. Firstly, I am not using taglines. Those are ID lines added by the software itself. A taglines starts with an ellipsis, like this:

..This is a tagline.

The tearline is 3 hyphens (---) and indicates the end of message text to fido mail tossers. The cutline (2 hyphens, --) indicates the end of Internet text to UUCP mail tossers.

I don't add a .SIG file as so many others do, because I simply don't have the interest, but there's nothing in netiquette to tell me I shouldn't if I so desire. A "polite" sig file is around 5 lines long, but I know of several that are up to 20 lines (often longer than the messages they cap).

Finally, as far as not wanting to read them - don't scroll down that far and you won't see them. I see you're in an .edu domain, so you're probably not paying for your access. I am paying, and so is practically anyone in a .co.* or .com domain - and no one else has complained; thus, I tend to take your complaint as, frankly, a bit brassy.

NOTE: In this second revision of this post, some changes and additions
(and at least one deletion) have been made. For those who have seen
it before, I have made the following key so that you can skip over
the stuff that has not changed:
"+" = New item on the "will trade for" list
"@" = Change to previous listing (either a better trade
offer, or other modification).
-
-
I am willing to negotiate (i.e., if you have an item listed under trade #1,
and think it is the extras included in #2 I will not automatically say no).
My answer will depend on the condition of your item, any extras you have
with it, and last, but not least, how badly I want to trade the day I
recieve your e-mail. <grin>
-
Also, I am willing to pay additional cash to you, up to the limit of my
current budget restraints, if the item calls for it (i.e., if you have an
item listed in #2-#4, but only want the STe, or if you have something
with superior specs to the item I have listed).
-
Replies via e-mail, please.
==========
.
.
[1] Atari STe (4 megabytes of memory, TOS 2.06)
WILL TRADE FOR any one of the following:
-
PC ITEMS:
=========
+ 386DX/40 motherboard with CPU, 8 megabytes of RAM (or 4 megs +
either a moderate size IDE drive or sound card with Sony CD-ROM
interface), case (mini- or midi-tower) and power supply. Extras
such as floppy drive, I/O card, etc. are a plus, but not
required.
@ 486 VLB motherboard with 486DX2-66 or faster CPU and at least 4
megabytes of RAM or VLB SVGA card
* 486 PCI motherboard with 486DX4-100 or faster CPU
-
MONITOR:
========
* SVGA (14"-15") color monitor capable of up to 1024x768
non-interlaced
-
DRIVES:

=======
@ Iomega ZIP drive (external SCSI)[will pay cash for extra
disks you have, up to the limit I can afford]
+ IDE HD, 2.5": 340meg or smaller (min. 120meg) + $0.55 cash per
meg under 350 megabytes (i.e, 256 meg + $51.70).
@ IDE HD, 3.5", 1" high: 850MB or more WD or Quantum or 1gig or
larger for other brands, *OR* two smaller (i.e. 420-540meg).
@ SCSI HD, 3.5", 1" high: 730MB or larger Quantum, or 850MB or
larger for other brands, *OR* multiple drives adding up to
similar or larger capacities (i.e, two LPS340S, three LPS240S).
-
PRINTERS:
=========
* Color ink-jet printer (i.e, Epson Color Stylus IIs, Canon
BJC-210 or BJC-4000, Hewlett-Packard 600C, etc.)
* Okidata OL400e page printer
-
AMIGA ITEMS:
============
@ ICD Flicker Free Video-2 + $50 cash
+ M-TEC 68020i for A500 with 4 megabytes RAM + $50 cash
+ CD-32
+ GVP G-Lock
+ Pro-GRAB 24RT-Plus
+ VIDI 24 RT
+ GVP Series II HD-500+ with 4MB and no HD *OR* 0MB and 100MB
or larger HD
+ ICD Trifecta 500LX with no HD and 2 megabytes of memory (i.e.,
four 1Mbx4 ZIPs)
+ Any *TWO* of the following: :
~ Dell HD floppy drive
~ ICD FFV-1
~ DKB Megachip
~ CDTV
~ SupraTurbo28 for A500
~ A500+ (8A) motherboard with ICD A510 or Commodore
A502 bellyboard (for 2 meg total chip RAM)
~ $100 cash
-
APPLE IIGS ITEMS:
=================
+ 4 megabyte DMA-compatible memory card (populated) + either
$100 cash or Apple Hi-speed SCSI controller
+ 8 megabyte DMA-compatible memory card (populated) + $40 cash
+ RAMFast (rev. D preferred) + either $50 cash or empty external
case (with power supply) for hard drive or unpopulated 4 meg
memory card
+ 8Mhz or faster ZIP-GS + $50 cash (less $12.50 per Mhz for
faster units)
+ Second Sight video card (w/24-bit DAC) + $65 cash

-
COMMODORE 8-BIT ITEMS:
======================
* CMD RAMLink with 1 megabyte of memory (for Commodore 8-bit)
* CMD HD-20
* CMD FD-2000 + JiffyDOS ROM for C-128 or $40 cash
-
NON-COMPUTER (VIDEO)
============================
+ Hi-Fi VCR in very good to excellent condition
-
-
[2] Will add an Atari SM124 monitor & Practical Solutions Monitor Master
switchbox (not only allows switching between RGB and mono monitor,
but provides RCA jacks for line-level audio and composite video
output from any STE, STfm or STm computer) with the above Atari STe
IN TRADE for any one of the following:
-
PC ITEMS:
=========
* Pentium PCI motherboard with 75Mhz CPU
* Any 486 motherboard as listed in #1 with at least 4 megabytes
additional RAM
-
MONITOR:
========
@ 15" SVGA monitor capable of at least 1024x768 non-interlaced

DRIVES:
=======
* Iomega ZIP 100 with two additional disks
@ IDE, 3.5", 1" height: 1 gigabyte or larger WD or Quantum *OR*
1.2 gigabyte or larger if other brand
+ IDE, 2.5": 540MB or larger
@ SCSI, 3.5" 1" height: 850MB or larger Quantum *OR* 1 gigabyte
other brand
+ Mixed bag: Multiple IDE and/or adding up to capacities similiar
to or greater than the prior three items with the following
limitations: (1) No more than two IDE drives (three if one is
a 2.5" drive) (2) No IDE drive off less than 200megs (170meg
if 2.5"), (3) All 3.5" drives must be 1" (or smaller) height
-
PRINTERS:
=========
* 4-color ink jet printer (i.e., Epson Color Stylus II, original
Color Stylus, Canon BJC-600, HP-660C, etc.)
* Panasonic KXP5400 laser printer
-
ATARI FALCON ITEMS:
===================

+ 14 megabyte memory board
+ Blowup-FX board
-
AMIGA ITEMS:
============
@ Commodore A-2000 bare bones unit. Units with revision 6.2
motherboards favored.
+ Supergen (Digital Creations) genlock
+ VIDI-24 Pro RT
+ CSA Derringer (25Mhz, 0K)
-
COMMODORE 8-BIT ITEMS:
======================
* RAMLink with at least 4 megs of RAM and RTC. Battery-back up
unit a plus.
@ CMD-40 or larger
-
-

[3] In addition to the STe (see #1), the SM124 and Monitor Master (see #2),
I will add: (1) Replay IV 8-bit sound digitizer cart for Atari ST
series computer, including software. (2) Miscellaneous Atari ST
software, including, but not limited to: Warp 9 v3.5, UIS 3 v3.30,
Flash 1.6, Shadow. Will TRADE for any one of the following:
-
PC MOTHERBOARD:
===============
+ Pentium PCI motherboard with 90Mhz or faster CPU (or 75Mhz
with 4 megabytes of RAM)

[4] In addition to everything listed in #3, I'll add: (1) Rombo VIDI-ST
greyscale real time video digitizer for ST series, including software
to do three-pass color with included filters or optional color splitter
(which I have buy have not yet decided to sell or trade, but could
be convinced to), (2) ICD Advantage+ SCSI host adapter with 2 cables
and software, (3) Defective 3.5" 1" height 120MB Conner SCSI hard
drive; spins up, recognized as present by some parts of the ICD Pro
Utilities on my Falcon, but will not boot or format. All in TRADE
for any one of the following:
-
PC MOTHERBOARD:
===============
+ Pentium PCI motherboard with 100Mhz or faster CPU (or 75Mhz
with 4 megs RAM or 90Mhz with 8 megs)
-
AMIGA:
======
+ A1200 (with no HD or extra memory)
+ A530 with at least 4 megs memory, no HD

For Sale
STacy
all the normal things that come with a STacy, PLUS:
FOUR megs of RAM
130 meg Hard Drive
Installed and working ADspeed board (software or hardware switchable
External Keyboard port, just plug in a Mega ST(e) Keyboard
(keyboard not included)
Extention cord for a keyboard, compute from across the room
Wired for a battery (battery included but not very good)

Make a serious offer

Email me at STCHIP@delphi.com

4589. Falcon questions

Newsgroup: comp.sys.atari.st
Date: 1996-06-15 00:00:00 UTC
From: gold@shell.aros.net
Message-ID: <4pvfo5$cb@news.aros.net>
Source record: 143431

I have some questions about ports and adapters on the Falcon030:

1) How difficult would it be to obtain VGA and SC1224 monitor adapters for the Falcon? (And how much do they typically cost?)

2) I've heard stuff about the Falcon using 2.5" IDE drives. Does this figure refer to the physical dimensions of the drive, or the type of connector it has? How hard is it to find a 2.5" -> 3.5" converter? (I'm assuming 3.5" drives are easier to find.)

That was a little mistake..

>inputs. Is there some kind of external adapter to change a composite

Composit Video means you have R,G,B H- and V-Sync all as one Signal.
Your SM1224 need a single H and V-Sync and also the tree Colorsignals
R,G and B.

>opening the monitor to achieve such a purpose? I'm not afraid to solder

No chance to fix this by the SM1224 alone.

So you allready have a Composit Signal you need a Board that can
split Composit in all single Signals.

>things, but fooling around with the voltage inside a monitor is not
>something I'm willing to do.

Please, don't open this case with plug in any power outlet!
This Machine contains 28.000V inside. (Screen Boostercoil)

>like to get a computer that would work well with HD recording (my Mac
>Color Classic could handle straight MIDI, but not hard-disk recording).

You need a fast SCSI Harddrive to store the samples.
Make sure your falcon allready have a clockpatch to supress SCSI-Errors!

I use a IBM DPES 31080 Harddrive (external SCSI) for sampling and also.

Regards, Robert

Once more I post XBIN.prg in this group. It's a decodition program for
ATARI, that decodes Binhex 4.0. files.
Encoding in Binhex is not possible.

I send is with uuencode

Yes, as far as I know, these are fine. Technology has just come that they can squeeze all the circuitry into 3 chips instead of 8 or 9. They will work fine (as long as you don't mix 3 chip and 8 (or 9) chip).

CB> Thanks, Carsten
CB>
I just tried to use recent TrueType fonts from Win95 [dated 28.11.95, the
supplied stuff Arial, Courier,Times New Roman] and found that NVDI 3.02
find them to have no Font-ID. When in a programme that uses TTF-fonts
Arial will show but when I try to change to one of the others [Courier
for instance] the programme bombs.
There appear to exist different kinds of TrueType fonts!!!! Mind the date
and font-id's!!

Source record: 143499

>Note: the MagiC PC demo, as with STonX and other cheap rip offs of
>Gemulator,

How is it that anyone who writes an ST emulator is automatically ripping
off Gemulator? Does Gemulator have a God-given right to be the "One True
ST Emulator"

LIES about benchmark results. The 200 Hz system timer, which
>is used by Quick Index, GEM Bench, and other Atari ST benchmarking
>utilities, is incorrectly emulated on MagiC PC and STonX, at a much
>lower frequency than 200Hz, giving the illusion that benchmark results
>are 2 or 3 times faster than they really are. If you use a stopwatch and

I've been using STonX for months, and the 200hz problem seems to be fixed.
It achieves remarkable speed considering that it was written in portable C
code. It's at least twice as fast as my 1040STe. Granted Gemulator is
faster, but STonX has an advantage in my book, it runs under Linux.
Two things have kept my from buying Gemulator, M$-DOS/Window$ and the
price, considering I can buy a real ST for less, However if a Linux version
came out, I'd be sure to buy it. (hint hint)

4603. ANY BGM (Background Game Music) lovers out there? Wanna trade???...

Cross-posted to: rec.games.video.3do,rec.games.video.arcade,rec.games.video.advocacy,rec.games.video.misc,rec.games.video.marketplace,comp.sys.amiga.audio,comp.sys.amiga.marketplace,comp.sys.atari.st

Hello!! I have so far a nice collection of COMPACT DISCS full of *original* music recorded out of various home and arcade video games. These CDs I have made MYSELF. I didn't go to Japan or anywhere else to buy them, I am the only one who has them.
The sound quality is F L A W L E S S !!!

I would like to increase my collection by TRADING tape "dubs" of what I have with possibly YOUR copies of what you may have (or what you can record.)

If you are interested, please E-mail me for more details..
I would be interested in music from ANY system, ANY game.
(ARCADE, SNES, GENESIS, PC ENGINE(TG-16), JAGUAR, NEOGEO, PSX, SATURN, AMIGA, CD32, ATARIST, ETC.. ETC.. ETC.. ETC...)

I TRY to be a perfectionist and I look for good quality dubs (audio will be recorded onto High Bias Type II cassette tapes)

Hope to hear from anyone out there.

If you already have recorded some stuff, send me a list and I will send mines.

Later!

>
>>>>
Yes you can, BUT: 1) Now days most PC floppy drives come
patched as drive 1; you must change it to be drive 0.
2) Be carefull of the orientation of the 34 pin cable, pin 1. On
some floppies, you must twist the cable 180 deg., TEAC being one of them.
From there it should be 'Plug and Play'.

4606. GDOS and STalker

Newsgroup: comp.sys.atari.st
Date: 1996-06-15 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4ptm6p$626@dodgson.math.psu.edu>
Source record: 143503

I am a total noice in GDOS matters, and I am trying to use fonts other than the default system font with STalker, with no success so far. I followed the instructions in the manual, putting GDOS in my auto folder and ASSIGN.SYS (written following the example from the manual) in my root directory, and the fonts that came with STalker in the directory given in path. Nothing happened: the font selector in the Preferences menu remains greyed out. Does anyone have any idea of why this could be?

Aloha,
I've noticed that Geneva_TOS (the part of geneva that allows
one to run tos programs in a window) has a term cap file which makes
the windows able to display and manipulate text according to vt52.
Anyone know if there is a way to make these windows vt100? Perhaps
an addition to the term cap?
Thanks,
Brian

I found Sozobon C to be quiet good. Its not really simple to install,
but not too tricky. If you want I can send you a copy, which is
semi-installed already, and notes on how to run it. Or you can get a
copy yourself, and I can give you a hand with the installation if you
get stuck.

>
Try the following:

- Increase the 'cache' memory available as much as possible.
- Increase the harddisk space availabe
- Defragment your harddisk
- Buy a processor speed increaser
- Buy a new faster computer, say a TT

the problem is that the bog standard ST isn't up to vector
calculations at super speed, and still being able to run everything
else un-affected, there just isn't enough processor time.

Personally I would only run Speedo, If I were using it with a GDOS DTP
or WP program, I certainly wouldn't use it for everyday use, because
of the slowdown that you get.

: Hi there:

: I'm just motivated to buy a Iomega Zip drive, they're SCSI and
: the output port is an SCSI-2, the same as my Falcon!!!, so it might be an
: excellent upgrade, now:

I have one and I love it...

: 1).- Does anyone have tried using it with Cubase Audio? (I know
: it shouldn't be a problem since the transfer speed is 10 MB/s.)

Personally, I haven't, but Chris Krowchuk and my friend Bill Have, and they
are of the opinion that it works pretty well.

: 2).- Do I have to format to Atari format? or just use the one
: that comes with it? they sell Mac and Pc versions, the dealer didn't know
: about a diference in format.

You will need to use either ICD Pro ZIP Tools (freely available, but you need
ICD Pro to use them) or any hard disk software for the Atari that can format
SCSI drives (hint: one is scheduled for an update to do this, and it's fast
too!)

: 3).- Will my files (ex: GIF, JPG, AIFF, etc) be compatible with other
: computer platforms? (this is actually in relation to the formatting),
: unplug here, plug there and go...

If you partition the drive to no more than 32 MB partitions, you shouldn't
have any problem with using the disks on another system. (i.e. PC or Mac)

: 4).- Where can I get the cheapest price on these drives, It's
: nice to have 1 GB at a time!!

If you want to do some large file creation, get a Jaz. It's faster, and
holds a gig at a time, and works basically the same on the Falcon.

: Regards!

4613. TT 16 meg config?

Newsgroup: comp.sys.atari.st
Date: 1996-06-16 00:00:00 UTC
From: rlmagee@acs.ucalgary.ca
Message-ID: <4q0n48$nmq@acs5.acs.ucalgary.ca>
Source record: 143360
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi all,

I just bought some 4 meg 30 pin SIMMS for my TT, hoping to get it going with 16 megs of TT RAM. The SIMMS I got were the three-chip kind, and the little label says "4MB 30PIN W/Parity" (oh yes, they are 70ns).

Now when I opened up the TT the jumpers on the TT RAM expansion board looked like this:

```
. (some big socketed PLCC chip) .
| |
| |
-----------------------------------

.[. .] W105
W106 [. .]. [. .]. W104
[. .]. W103
W102 [. .].
[. .]. W101
```

Now someone posted here awhile ago that I should set W101 to pins 1-2, W102 to 1-2, W106 to 1-2, W103 and W104 to 2-3, and W105 to 2-3 (for burst mode), but which pin is 1? I've seen jumpers where the pins go from left->right and right->left, so I'm not sure.

All the jumper settings I've tried so far have either given me unrecognized TT RAM, or TT RAM which passes the bootup test, but with random crashes within about 5 minutes.

My machine works fine with 4 1 meg SIMMS in it (8-chip no parity 70ns), so either a) I haven't hit the right jumper settings yet, b) the new SIMMS are bad or the wrong type (do I need 8-chip nonparity?) or c) my TT doesn't like having more than 4 megs of TT RAM 8-(.

If someone with a working 16-meg TT could get me a clear diagram of their jumper settings, I can track down whether or not my new 4 meg SIMMs are bad...

thanks very much,
-Russ

: direction. Any help would be appreciated. Thanks in advance.

I tackle the hard drive side of things.....

You must use SCSI and not IDE.
You must have a DMA to SCSI adaptor in between the ST and the external HD.
There is no room for an internal HD and adaptor :-(
This adaptor allows the ST to convert it's ASCSI data into normal SCSI data.

The easiest way is to buy The Link 2. It supports SCSI 1 and 2 and will
interface to CD ROMs and ZIP drives etc.

Format the HD with ICD Pro utilities that come with the Link 2. Set it to
auto-boot and off you go.

I hope this helps.

Julian.

I'm almost sure that this is not possiblw without a fair bit of
expense. IIRC the reason that they use the cart port is that they are
IDE drives and as you know the Link is a SCSI adaptor. Therefore they
are just as incompatible as your serial and parallel ports, if not
more so.

>Any help would be appreciated

I don't know anything about the formatting problem but I originally
had a ICD formatted drive and switched the driver to HDDr with no
problems. Now that it is formatted follow the instructions in the
manual which is basically run the HDDRIVER.PRG then run the Install
program and you should be away.

That's VERY interesting. I'm trying to find a cheap 16MHz 68000 or 68010
to upgrade my old 520ST with, and they are very hard to find. Since the
MegaSTE has a 12MHz CPU overclocked to 16 any 12 MHz part will probably work.

Comment's are welcome. I would have bought a 12MHz part earlier if it
weren't for a rumor that Motorola part's don't overclock aswell as
Intel and it's clones due to architectural differences. Sounded like
crap then, but there might be some truth to it?

From: slayman@vbs.com
Message-ID: <15393IRMFCIVECWAJFO@vbs.com>
Source record: 143369

Greetings:
I recently purchased a Mega 4 to which I would like to connect a
Megafile 30. When I have powered up the Megafile and then the Mega,
neither machine boots. Can someone pass along some advice concerning
how to set the two up so that the Mega HD is the boot drive (partitions
abc) and the Megafile is a slave (partitions f,g,h,i). ASm I goiung to
have to re-format the Mega?
Thanks in advance

Sorry, 'we' have not had this discussion, anywhere.

>Firstly, I am not using taglines.

Call them what you like, it is YOUR software that IS inserting, what I call taglines, into, what we all call a newsgroup.

Here is a quote that fits this situation:

------------Start Quote from Zen and the Art of the Internet---------------

4.13 Usenet "Netiquette"

There are many traditions with Usenet, not the least of which is dubbed 'netiquette'--being polite and considerate of others. If you follow a few basic guidelines, you, and everyone that reads your posts, will be much happier in the long run.

4.13.1 Signatures

At the end of most articles is a small blurb called a person's 'signature'. In Unix this file is named '.signature' in the person's login directory--it will vary for other operating systems. It exists to provide information about how to get in touch with the person posting the article, including their email address, phone number, address, or where they're located. Even so, signatures have become the graffiti of computers. People put song lyrics, pictures, philosophical quotes, even advertisements in their ".sigs". (Note, however, that advertising in your signature will more often than not get you flamed until you take it out.)

Four lines will suffice--more is just extra garbage for Usenet sites to carry along with your article, which is supposed to be the intended focus of the reader. Netiquette dictates limiting oneself to this "quota" of four--some people make signatures that are ten lines or even more, including elaborate ASCII drawings of their hand-written signature or faces or even the space shuttle. This is not cute, and will bother people to no end.

Similary, it's not necessary to include your signature--if you forget to append it to an article, don't worry about it. The article's just as good as it ever would be, and contains everything you should want to say. Don't re-post the article just to include the signature.

-------------------End Quote---

I wondered the same thing. It's a hell of a change in program size. Does
this new version fix the old 'hanging' problem?

Also, is support for the Brainstorm DSP Decoder in/or planned so that those
of us with Falcons get super fast JPEG displays??

n> now THAT I could swallow :-)

This discussion properly belongs in c.s.a.s.p or possibly one of the advocacy groups, but still... There are those of us who consider C as a perversion. Period. If I want to write something incomprehensible and fast, I'll use assembler (and hand-optimize as usual, since so-called optimizers don't); if I want comprehensible source code and only moderate speed, HiSoft BASIC 2 works nicely. If I want an incomprehensible curiousity that refuses to compile equally on an ST, a Sun, a DOS-box, or a DEC, well, then C is the ticket!

There's a thing called Heat and Serve C which is like Sozobon, but has a much easier installation program that works even on a one floppy drive system. It works, but you still have to find the right C documentation for your Atari computer and I have yet to get a GEM program to assemble on it. Any takers?

Actually, the only hardware component is the card that lets you use TOS chips. Other than that, Gemulator is mostly a software emulator. In fact, there's a laptop version that lets you use MagiC without any TOS chips or card which is what I'm looking into, unless MagiC PC does the same for less :)

> I don't think it's too far fetched to say that you get 10-15%

4636. UUCP-ST news

Newsgroup: comp.sys.atari.st
Date: 1996-06-16 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <550542261.80610.58.starship@3rdplanet.com>
Source record: 143383

Well, sicne ther has been a complaint (albeit an ignorant and specious one), I slightly modified News_Out todya - it now cuts out any existing product ID liens it finds at the bottom of outbound articles, and if a sig file exists, it appends that instead. If no sig file exists, my UUCP-ST product ID will be appended.

If there's anyone who objects to that, I suggest you run down to your local auto dealer and ask for a car with no brand name on it. If they stop laughing before you leave, perhaps they'll explain what purpose trademarks and such serve.

w> Sorry, 'we' have not had this discussion, anywhere.

You and I have not had this conversation anywhere else, no. "We" are the Fido sysops and users of Atari systems.

>> Firstly, I am not using taglines.
w>
w> Call them what you like, it is YOUR software that IS inserting, what I
w> call taglines, into, what we all call a newsgroup.

You can call Bob Dole a liberal, if you like, or even a Saturn V rocket, but that won't change the facts.

I suggest that you do a little math if you think I'm "wasting bandwidth."

(1) I'm not using a .sig file at all; that's 80 chars * 4 lines = 320 chars per message that you're saving because I'm a nice guy. At 14.4k bps (which is awfully slow, but I'll assume you're too cheap to buy a 28.8k modem), with no advantage due to data compression (also non-factual, but I'm trying to give you the worst possible case here), you'll save .22_ seconds per article because I /don't/ use a sig file (I may add one, now that I see how little time it actually takes). If I post a hundred articles per day (and I think my record is 10), you'll save 22 seconds.

(2) The total number of characters in the lines appended by UUCP-ST (over which I /do/ have control, since I'm writing it) is less than 120. Using that same hypothetical modem from "1" above, it will cost you an extra .083_ seconds per article. I'll have to post more than my daily record of 10 to even approach an extra second's transfer time per day.

(3) Jetmail appends its own stuff after the tearline, and eventually I'll fix UUCP-ST to ignore everything after the tearline; however, again it's adding less than 120 characters. Right now, my priority is getting the package to work error-free and get it released. I didn't write Jetmail, and I can't do much about what it adds. I have re-ordered my functions so that UUCP-ST runs before Jetmail most of the time, thus eliminating that extra tearline and product ID, but I did that before anyone mentioned the fact that it was there.

So, quite frankly, if my extra second or so per week is driving your internet access costs up too high, I suggest you get a new hobby. Like maybe assistant librarian at SinClap's university, they seem to think nit-pickers are good employees.

Or are you already an accountant?

It's crap. Overclocking an Intel CPU will destroy it very quickly due to internal architecture; Intel lays out many "sharp angle" paths on the CPU, which cause ringing and high internal inefficiencies, resulting in heat. Motorola's chips are physically larger and use more-or-less straight-line and curved pathways, resulting in less heat. My MSTe has been running at 16MHz almost constantly for years - no heat problems.

Finding a "cheap" overclocked upgrade is really pointless, though - pay the difference for an upgrade with cache RAM and, if you can get it, an '030 CPU. That makes more difference than doubling the clock rate anyhow. If you could add 64k of cache to the 8MHz CPU, you'd almost double processing speed without increasing the clock.

AIUI, the GEMulator is just an ISA board with ROM sockets for the TOS ROMs,
and it relies on software emulation just like every other emulator. MagicPC
is more-or-less a complete virtual machine.

If that's incorrect, I'd like more detailed specs on the GEMulator.

From: Martin.Byttebier@ping.be
Message-ID: <835027830_OASIS_@ping.be>
Source record: 143388

Hello,

I have Cab with Mint/Mintnet pretty well working now, but there are
some things I don't understand quite well.
A few houres ago I've tried to pay a visite to the homepage of
Alexander Clauss. After quite a lot of downloading I always get the
message:
runtime error 204 at offset $.......
It's not only the page of Clauss that's suffering from this error.

Also I noticed that I sometimes get a "time out #1 e.a." warning.
Mostly the downloading continues but sometimes I get quite a lot of
these warnings in what it seems a cyclicous progress.

What does these warnings means and what can I do to avoid then?

BTW: I'm running CAB 1.31 with the cab-for-mintnet-117 overlay on a 20
mb TT with a Crazy Dots 2 card with NVDI 2.5 and AES 4.1 (N.AES)
Thanks
Martin

I didn't figure you for a pirate, but I wanted to be sure that no one else
was misled - after all, PD is not copyrighted material. And while the ICD
utils won't format or partition a drive, or allow the use of the built-in
cache capability, it _is_ possible to install the software if one has the
technical ability - far less ability than that needed to "hack" the software
to enable the protected portions.

h> I speak as an owner of an ICD AdSCSI (with the free utilities), Cleanup
h> and ICD Streamer software (bought separately) and ICD Pro utilities
h> (bought separately), so I think I've done my bit to support them. I'd
h> have bought an internal HA for my MSTe if Tom Harker would've recommended
h> one to me too.

I think I've owned 4 or 5 ICD host adapters of various descriptions. AFAIAC,
they have always made the best hardware for connecting HDDs to STs.

4646. DM 2 for GEM??

Newsgroup: comp.sys.atari.st
Date: 1996-06-16 00:00:00 UTC
From: jake.goerzen@dinuba.com
Message-ID: <8C2A547.0363004F90.uuout@dinuba.com>
Source record: 143393

Someone should write some games for MagiC, Geneva, and MultiTOS! I saw MechWarrior 2 for windows 95 (running in a window) and thought to myself, GEM can do that. GEM could have done that back in '87. I know standard ST graphics aren't up to the task, but the Falcon's graphics can do it. And all the TOS clones with graphics cards that allow at the least 640x480x256 colors. I talked to a TOS clone manufacturer and found these new machines are using 64 bit bus PCI technology with 68040 & 68060 cpu's. Industry standard PCI and ISA graphics cards, ps/2 simms, and sound cards like sound blaster! What you would pay for a pentium system is close to the same for a equally equipped TOS clone 68060 system. And the 68060 is better (IMO).
I have some ideas for some games and utils, but I currently lack the time and knowledge to program them myself. I've always wanted to learn however. So, I'm seriously looking into programming languages to develop GEM applications. I need to learn how GEM dialogs function and how the AES works (and much more I'm sure). I do have some knowledge of Pascal and C. If anyone has suggestions as to which package is good for a beginner I would appreciate it.
Here's an idea for someone to run with. Dungeon Master, the mother of all RPG's! Imagine this, under MagiC, Geneva, etc., you're transferring a batch of files, Esscode is working on a batch of *.uue files, and you're rendering a ray trace all in the back ground. Having nothing else to do, you run Dungeon Master 2 for GEM! A GEM window with no scroll bars pops up on the desktop. It's contents are black, then whhhooooshhhhh... the FTL logo is displayed. Next, the intro to the game continues with animation and sound FX! (If you've played MechWarrior 2 then you know what I'm talking about) You're still seeing the desktop, menu bar, windows, and icons (that are not covered by the top window, which is the game). You still have access to ALL desktop functions and applications. Suppose, DM2 for GEM has a minimize button on the window, which when clicked, would automatically pause the game and put it in the corner. Suppose the video requirements for DM2 for GEM would be 640 x 480 x 16 colors. (TT medium). Say, you had even better like 640 x 480 x 256 colors, then no pallet shifting would be necessary. (assuming the game only uses 16 colors or so). I know this can be done. What do you all think about this idea? ;-)

>
> 1).- Does anyone have tried using it with Cubase Audio? (I know
>it shouldn't be a problem since the transfer speed is 10 MB/s.)

The ZIP is only 1mb/s.

> 2).- Do I have to format to Atari format? or just use the one
>that comes with it? they sell Mac and Pc versions, the dealer didn't know
>about a diference in format.

the pre-formatted ones are useless to you, you need to re-format them
to use them on the Atari, if you partition them to less that 32meg per
partition then you should be able to share data with a PC.

> 3).- Will my files (ex: GIF, JPG, AIFF, etc) be compatible with other
>computer platforms? (this is actually in relation to the formatting),
>unplug here, plug there and go...

They should be...

> 4).- Where can I get the cheapest price on these drives, It's
>nice to have 1 GB at a time!!

I'm guessing that you are thinking about the Jaz rather than the Zip,
these may be about 10mb/s and definitely use 1 Gig disks. Don't know
anything about US pricing thou'.

And while we're on the subject,

I like seeing a bit of creativity; I don't know of any company that doesn't use a letterhead so why shouldn't we `advertise' a bit about ourselves. My vote is keep em coming! We're all individuals, aren't we? I normally reduce my SIG to four lines (after I got seriously flamed by some anal-retentives on one of the demon newsgroups), but for the open minded here's the full version. BTW I change the quote regularly and often the graphic too, depending on the recipient.

Ah yes, I fondly remember those good old 300 baud days....

Ali.

Hello,

When I tried to partition my hard drive with HD Driver, it only
recognized half of the disk space. It is a Quantum 250 mechanism
with 40 megs, and the Utility program only said I have 20 megs.

I went ahead and repartitioned with the ICD software that came with
my 'The Link', but I really want to use the DMA multitasking of
HD Driver (plus I paid $40) :-)

Any help would be appreciated

Jeff

4653. Anyone have a copy of Concordance Ver 3.1 for sale?

From: mparrott@kendaco.telebyte.com
Message-ID: <4q02au$265@news.telebyte.net>
Source record: 143448

A recent shipment from Toad Computers had a flyer which indicated that the Panther VGA video card could be installed in a TT030 computer. Has anyone out there tried this, and if so, what is your opinion?

I'm wondering because I've wanted a decent video card for some time now but couldn't justify the high cost of what was available. At $189, the Panther sounds like it would be an affordable alternative to the $400+ of every other video card I'm familiar with.

Thanks for any input,

I run PGS2 and it runs great. To add programs to the virtual disk.

first, select floppy disk A or B before you start Magic C from the first little screen's manue. Then, select read disk A or B twice.
The disk will be read and after Loading magic C desktop the files can b be read by selecting the virtual floppy A or B.

It is possilble also to copy these files to Drive C.

I was able to run Deluxe Paint with no problems!

I hope this helps.

Raymond

I dissagree, I like to see nice tag lines and signatures :-)

We had this discussion on our local BBS, and decided that we would
voluntary not have sigs on all local areas, and would try and stick to a
two line sig for Netmail and NeST areas, 'cos it's our SySop thats paying
for the extra lines :-)

In here I pay for the calls, and I'm quite happy to have the sigs :-)

In the newsgroups I like to see the inventive sigs that people come up
with, but where do you draw the line?

You can't limit messages to a max number of lines :-(So we must ask
everone to be sensible about it :-)

My sig is boring, but as soon as I can come up with something better I will
change it :-)

Also using Oasis I can't have different sigs, so I'm stuck with one for
everything :-(

The other point is, if people stopped 'Quoting' so much of the previous
messages, then this would save a lot more than stopping sigs :-)

KEEP SIGS, I like them :-)

Yours Roy

>per message that you're saving because I'm a nice guy. At 14.4k bps (which
>is awfully slow, but I'll assume you're too cheap to buy a 28.8k modem)

Just a minor point, but some of us could only afford to buy 14.4k modems.
At the time of buying my modem, there was a one hundred pound difference
between a 14k and a 28k. Not a question of being cheap, I would have gone
for a faster one, but simply could not afford it. I don't think you meant
to be offensive, but your comments could be taken as such.

Let's all cut down on the quoting, and be reasonable with sigs and tag
lines, and life will be better for all. Four or five line sigs is fine by
me. More than that and I think it's unfair on those who pay for their
downloads.

Best wishes
Mike

>
>The result of all this is a a still rather noisy sample, though it sounds
>better than
>before the right channel was removed. Can anyone think of something to try?

Have you tried using a different lead, or a different sound source ???

It could be that there is a break in the lead somewhere, or that the
shielding has borken, or that the plugs on the lead are faulty.

Also check the output if you can from the synth, and check that both
channel outputs are clean.

The try using a different source, with the same lead, and a differnt source with a different lead. If its still noisy then the chances are there is a fault in the Falcon.

This could be quiet complicated, or something as simple as a dry soldered joint, or a loose wire.

If it is the falcon, get it checked out at a repair centre.

ATb.

GS> electronics.

Ah!, OK, slow down time.

GS> Having said that I'm willing to have a go.

Goodo!, thats the spirit.

GS> Could you clear a few things up for me ?

Sure.

SS>> If its a Tatung 'D' chassis, How can I tell ?

Um!, it'l say so on the label.

SS) then the o/1 switch is U/S,

GS> Whats the o/1 switch is that the push on/push off switch at the front
GS> (for the power) ?

Sorry for the abreviations, its the On Off switch, a well known stumbling block for tatungs, amongst others. Its a double pole switch, and should read as 2 seperate switches, and possibbly a set of terminals on the top of the switch will make a momentary contact on push on.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

No, the transfer speed is NOT 10 MB/s, it's 1 MB/s. I think you can record
without any problems.

> 2).- Do I have to format to Atari format? or just use the one
>that comes with it? they sell Mac and Pc versions, the dealer didn't know
>about a diference in format.
Yes, use SCSI-tools or HDDriver. You only have to re-partition it.

> 3).- Will my files (ex: GIF, JPG, AIFF, etc) be compatible with other

IOMEGA JAZ DRIVE & FALCON

I just got an Iomega Jaz drive and spent the weekend playing with it.

I got the portable scsi version (very compact).
It makes a fair noise when actually accessing data but otherwise is quite quiet.. I don't find it obtrusive.

It comes with SCSI-2 cable, scsi-2 to 25pin_scsi convertor, separate (but compact) powersupply. It is auto-terminating - which is nice.. though you can override it with a switch at the back if you want to (a little LED lights when it is terminates the scsi chain.). SCSI ID is freely adjustable via a rotary click-switch.

All other settings are done by (PC or Mac) software.. I haven't yet read the PC windows manual pages and I don't know if they give info on various settings, but it works out of the
box as is, they are not documented on hard copy. [I guess it may have parity enabled by default, so may not work with STs unless there is a way to disable it.]

It works well with my Falcon (TOS 4.04, 4 megs, Power-UP2 cpu clock doubler).
I am using ICD 6.5.5 Pro drivers.

RATEHD gave something like 1400 K/s and 16ms average access time.
So it is a bit slower than the best hard disks (my Quantum
730mB Lightning managed ~1600 K/s).

(Don't expect to see much more than 1700 K/s from a Falcon with any drive.)

The 'Jaz Tools Disk' it comes with is a 1GB disk which contains Mac and
PC software on it in a dual format... you are supposed to run a
floppy based install program on your Mac or PC and it converts this
disk to the format you are using and erases the files for the other format.
To reformat the disk to use with the Atari I believe you need a particular
scsi command to be sent... my guess is ICD Pro's SCSI.PRG could do this, but I am keeping this disk for use with another platform.

Watch out for any extra disks you buy... you may be quoted for the 1/2 Gig version and not the 1 Gig ones. In the UK the latter are about 100quid as opposed to about 65.

The Jaz disks need reformatting for use with the Atari... you can't use repartition them with
ICD software... however to save the 30 minute surface check you can tell ICD's formatter to do '0' passes of the surface check.

When trying to re-partition the disk (write partition info only) I had problems... it seemed
to only work if I told ICD to reformat the disk at the same time... so the trick of setting it to do 0 passes of the surface check was very useful.

Checkout http://www.iomega.com for more info.

I figured it would be something like this.

>Finding a "cheap" overclocked upgrade is really pointless, though - pay the
>difference for an upgrade with cache RAM and, if you can get it, an '030 CPU.
>That makes more difference than doubling the clock rate anyhow. If you could
>add 64k of cache to the 8MHz CPU, you'd almost double processing speed
>without increasing the clock.

"Cheap" is the right word here. In a DIY project like this price is
essential. The chip will only cost me around 18$. I suppose a cached
version will cost me a lot more, right? I'm not willing to pay more than
around 35$ since I'm most interested in learning by doing. If I'm lucky
I might even get it for free if I salvage it from junk.

If I really wanted to get the machine I want I could just buy one for a
lot less then these upgrades will cost me together even as DIY projects.

Well, the bottom line here was that 12MHz should beyond resonable doubt
work at 16Mhz?

But regardless of the drive type you won't ever get SCSI transfer rates
that are beyond 1.8 MB/s. The Falcon SCSI hardware sets the limits.

I have, use, (and translated the manual for) Outside, and the hardware requirements are an 030 based machine with at least 2 mb of memory (4 mb is a very good idea though). NVDI is a good idea too. It works well enough, considering the fact that it uses a hard disk partition for memory expansion. It's not slow, it's not fast - the faster the hard disk you use, the faster the vmemory will work. Yes, there are some incompatibilities, but it's not really the fault of Outside, as some software was never intended to run with vmem (e.g. games). Most of the time, though, adjusting the settings help.

Anyone who understood the past would not have described Algol 68
as 30 years behind. Some of its design was a serious mistake, but
other parts were extremely successful and no language since has
caught up. For example, its matrix handling has only now been
equalled by Fortran 77 - Ada's facilities in that area were a
regression.

Basically, you have to destroy a new dodec space station which has been
taken over by those dratted Thargoids. So you do any jump
(System/Galaxy) to a planet and there is a blue dodec station. One shot
kills it and you think great. However, upwards of 6 Thargoids then
appear and kill you! Jumping anywhere else takes you to more hostile
stations and more Thargoids. It's a right bummer.

Does anyone have the original mission text (mission 5) so I can see if
I've missed anything?

Thanks for any help,

I doubt it. There is much of merit in Algol 68 and its influence is
far-reaching. Even the rejected (by the committee itself) off-shoots
spawned a whole language family in the shape of Pascal. However, the
level of knowledge of the langauge itself is pretty low, and people
working on language design in Algol-derived languages (which is
essentially everything mainstream these days) would do well to study the
real thing rather than its offshoots.

It is easy to argue that Algol was far ahead of its time, and was
hampered by the ability of programming environments of the time to
exploit it.

Do we _really_ want every language to be C with a new coat of paint?

4686. 2nd HD problems (ICD Link)

Newsgroup: comp.sys.atari.st
Date: 1996-06-17 00:00:00 UTC
From: you@somehost.somedomain
Message-ID: <4q3l9t$lbj@usenet.pa.dec.com>
Source record: 143327

I'm trying to connect a second harddrive to my Atari MegaST system (TOS 2.06)
They are both Quantum drives. I'm using ICD Link (V6.0.6).

I can use each drive seperately:

Atari->ICD Link cable ->Drive ->terminator

No problem. However when I connect the 2nd drive then strange things happen.
The setup becomes:

Atari->ICD Link cable ->Drive1->SCSI cable->Drive2->terminator

The above setup results in partition information being trashed on one of
the drives.

Here are the details:

For Drive 1
1) Partitioned the drive (ICDFMT.PRG)
2) Installed ICDBOOT.SYS using the HDUTIL program
3) Tested the drive connected to the Atari. Everything works fine.

For Drive 2
1) Ensured that the "system" information (sector size, caching, read/write
verify)
settings were identical to drive 1 (don't know if that's necessary or
relevant).
2) Partitioned the drive (ICDFMT.PRG)
3) Installed ICDBOOT.SYS using the HDUTIL program
4) Tested the drive connected to the Atari. Everything works fine.

Installing both Drives
1) Hooked up the drives:
Atari->ICD Link cable ->Drive1->SCSI cable->Drive2->terminator
2) Switch on drive then computer.
3) ICDBOOT runs but does not display any of the partition letters.
4) Using ICDFMT shows that the partitions are screwed up on both disks.

Am I missing something obvious that I should or shouldn't be doing ?

Hi!

I need some suggestions how to upgrade my old ST. I need it to be faster and with hard disk. So I want to know about accelearation boards and HD interfaces. If someone knows about it please e-mail me rather than post to newsgroup. Thanks in advance

Rafal

4689. Spectre GCR won't run smoothly

Newsgroup: comp.sys.atari.st
Date: 1996-06-17 00:00:00 UTC
From: dano@falcon.ic.net
Message-ID: <4q3rgb$hs7@condor.ic.net>
Source record: 143330

I posted this request for help once, and I haven't heard back. Since my News server is flaky, I decided to ask once again.

I have Spectre 3.0, with all the necessary hardware and Macintosh 6.0.5 diskettes. The drive cable is in, the system boots, and the software (Spectre) works. I've loaded it several times.

However, 6.0.5 won't stop crashing on me, and I don't know why. Basically, here are the scenarios I've tried.

Under my standard setup, with Xboot, Selectric, etc. the system crashes after I try to do anything. For example, just selecting "About the Finder..." after booting off the 6.0.5 floppy crashes out, and says A System Error has occured, ID=15.

Under a blank setup, with Xboot loading nothing (other than ICDBOOT.SYS) the system crashes, but later. Fox example, I can run "About the Finder...", when I open the "Setup Readme" on the installation disk I can read it, but when I close it I ge the same crash as described above, except the system said "The following programs have become corrupt: Finder".

When booting off a floppy disk and then running the software, the system seems even more stable. Apple SC HD setup can easily crash the system. Maybe it should -- but it seems to recognize no HD, and then goes on to crash the system when the program shuts down with the ID=15 error described above.

For reference, my system is a MegaSTE with 2.05, 4MB of RAM, Monochrome monitor, and nothing else special. The host adapter is the Basic Atari one, the hard drive driverThe problem has now stumped me for some time. Spectre passes all its tests, and should work great, but I haven't had a great deal of luck.

Please E-mail responses, I suspect posts will not always get back to me.

-Dan

Have you got the SCSI ID the same for each drive? That's what it
sounds like to me. They must be different and are set by jumpers on the
circuit board. Look at your hard drive info to find out how to set them. I
would suggest 0(zero) for the drive that you wish to boot from and 1 for
the other drive. Make sure that you have both turned on in the HDUTIL.PRG,
it's near the bottom of the configuration window.
Hope that this helps.
Paul

yo !

just a little idea :

Anyone remember or know the "chip ziks" which were on atari
st games ?
Is the name of "mad-max" or "jochen hiple" say something to
you ?

in this case I suggest something.

translate the mad-max (or other chip-zik) format(s) to
.MOD (or .mid) format.
coz there are wonderful melodies in these ziks and these
melodies will be lost
with the ST !!!

(sorry for my poor english :)

Hi!

In article <14423_hsideras@mettav.demon.co.uk>, hsideras@mettav.demon.co.uk (Harry Sideras) writes:
#>The problem is that ICD uses a method of partitioning that Magic 4 doesn't
#>like. You need to partition with 'AHDI compatibility' turned on.
Nope. Reading and interpreting the partition table is job of the harddisk driver, the OS doesn't care about the format. Maybe there's a different incompatibility between ICD drivers and MagiC.

Ciao

Thomas

P.S.: I've written a tool for re-partitioning ICD-formatted hard disks into AHDI-compatible format _without_ data loss. Maybe an english version of it will ship with future versions of HDDriver.

FPINTO wrote this to All about Iomega --> Falcon questions::
F> I'm just motivated to buy a Iomega Zip drive, they're SCSI
F> and the output port is an SCSI-2, the same as my Falcon!!!, so
F> it might be an excellent upgrade, now:
F>
F> 1).- Does anyone have tried using it with Cubase Audio? (I
F> know it shouldn't be a problem since the transfer speed is 10
F> MB/s.)

I've tested the Zip with Cubase Audio and it was able to replay 6 tracks audio, but when I tried more, I got the "HD too slow" message after a very short while.

F> 2).- Do I have to format to Atari format? or just use the one
F> that comes with it? they sell Mac and Pc versions, the dealer
F> didn't know about a diference in format.

Yes - you'll need to format it with the hard disk tools you use for formatting normal hard disks.

F> 3).- Will my files (ex: GIF, JPG, AIFF, etc) be compatible with
F> other computer platforms? (this is actually in relation to the
F> formatting), unplug here, plug there and go...

Or like one of my favourite expressions: Plug and Pray!
Actually, the files are always compatible, but to be able to use the disk on a PC, you'll have to partition the disks with a maximum partition size of 32MB. I believe that a program called BigDOS can handle larger PC-partitions, but I don't really know how it works - haven't had the time or the guts to try...

F> 4).- Where can I get the cheapest price on these drives, It's
F> nice to have 1 GB at a time!!

Ehrm - the Zip is 100MB...
If you're thinking of the 1GB exchangable from Iomega, it's called Jaz.

Best regards,

Claes

4699. Atari Portfolio And Add-Ons For Sale.

Newsgroup: comp.sys.atari.st
Date: 1996-06-17 00:00:00 UTC
From: john@duplexx.com
Message-ID: <4q4ci2$cbp@shore.shore.net>
Source record: 143340

FOR SALE:

ATARI PORTFOLIO with cracked LCD - $25.00
This works great. A small part of the screen is blank. Great for
parts or to combine with the screen from another Portfolio.

PORTFOLIO/PC CARD DRIVE - 1 for $90.00 or 2 for $150.00
NEW - STILL IN BOXES. These allow you to read and write to
Portfolio Memory Cards with your PC. Get one for the home and one for
the office. These sold for over $300.00 new.

PORTFOLIO PARALLEL PORT - $25.00
NEW - STILL IN BOX. Print from the Portfolio. With the right
software(not included) you can transfer data between your Portfolio
and a PC.

PORTFOLIO SERIAL PORT - $25.00
With tele-communications software(not included) you can transfer
data between your Portfolio and a PC, MAC or ST. You can also print
from the Portfolio to a serial printer(like some laser printers and
most Apple printers.)

BUY IT ALL - $200.00
That's the Portfolio, 2 PC Card Drives, a Parallel Port, and a
Serial Port. New that would cost over $800.00.(minus the cost of
fixing the LCD screen)

All orders will get a disk full of PC and Portfolio Software.
(Including Windows programs that are compatible with the Portfolio
Address Book and Date Book.) Sales are COD via UPS or FEDEX. Prices
do not include shipping. Actual shipping charges will apply.

Respond here or via e-mail. I will respond quicker to e-mail.

Thanks,

Help. I was going to try to compile the latest version of KERMIT,
(see an earlier post from columbia) which is very out of date for the Atari.
The guy who did it long ago used a compiler called
Mark williams C Compiler.
It seems there were some quirks in it that won't work under
Heat 'n Serve C. I would like to update kermit, but can't get started
without MWC. I don't feel like spending money to buy a compiler I
will never use again, Especially when There are freebies around that usually
work as well.
Kermit needs higher baud rates, and a VT100 emulator in it.
Can anyone help? :-))

Newsgroup: comp.sys.atari.st
Date: 1996-06-17 00:00:00 UTC
From: armstrongj@aol.com
Message-ID: <4q4od4$2a6@newsbf02.news.aol.com>
Source record: 143346

hello. I bought a 1040 STf system for $25 (yes, only $25), complete with an SC1224 monitor. Is this machine worthless? I would like to upgrade it, but it runs TOS 1.0 and can't seem to run jack. I tried that internet package and it doesn't work. Could someone please tell me how to upgrade it? I constantly get replies telling me I need expensive hardware.
What I would most like to do is add a hard disk and possibly make the screen look nice. The GEM desktop is the ugliest, most non-functional GUI I have ever seen (at least the version I have is). There are a total of 3 types of icons and there are no fonts or anything. Whenever I ask about a HD, everyone says I need an adapter that cost $90. Didn't anyone ever make a HD that plugged directly into an ST? And how can I get a better floppy drive. 720K doesn't cut it.
Thanks for any help!

Lawrence Gold wrote this to All about Falcon questions:
LG> I have some questions about ports and adapters on the
LG> Falcon030:
LG> 1) How difficult would it be to obtain VGA and SC1224 monitor
LG> adapters for the Falcon? (And how much do they typically
LG> cost?)

These adaptors are standard equipment and should be found in any store that
sell Atari products. Here in Sweden they cost the equivalent of about USD30.

LG> 2) I've heard stuff about the Falcon using 2.5" IDE drives.
LG> Does this figure refer to the physical dimensions of the drive,
LG> or the type of connector it has?

It refers to both.

LG> How hard is it to find a
LG> 2.5" -> 3.5" converter? (I'm assuming 3.5" drives are easier
LG> to find.)

You can get an adapter cable at any store selling Atari or Amiga products, but
the Falcon's PSU can't provide enough power for all 3.5" HD's - some of them
draw too much current and need an external PSU.
The 3.5" drives are much cheaper than the 2.5", but there are only a few of the
3.5" that are small enough to be fitted internally in the Falcon...

Best regards,

Claes

4708. ST Monochrome Monitor problem

Newsgroup: comp.sys.atari.st
Date: 1996-06-17 00:00:00 UTC
From: David Chandler <chandler@nethost.multnomah.lib.or.us>
Message-ID: <Pine.SUN.3.91.960617190125.6070F-100000@nethost.multnomah.lib.or.us>
Source record: 143349
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

My SM1442 (whatever the original model was for the ST) monochrome monitor has the following symptom:

The entire display in squished into a half-inch wide vertical line in the center of the screen.

Does anyone know how this can be fixed? I am handy witha soldering iron but don't want to voltmeter-test every part in the monitor if someone else has fixed this before. It happened one day when I turned it on...

t> super-efficient OS Atari's, I could conqueor the world! BTW, how much
t> did that 16 megs of ram cost you...<hmm?> :)

At today's prices, quoted by several of the on-line SIMM suppliers, it would be between $320 and $1000 (prices vary wildly). At last year's prices, it probably cost closer to $600.

Hi. all

I've just bought a nice Sportster Vi 28.8 modem.

Has anyone found a good Int. string that works with it, as the pre-set configs seem a bit tempremental when used on the Falcon even with HS Modem installed.

Using it with Connect, Stik and Oasis 2

Thanks

Mike

My understanding is that "Heat and Serve C" is Sozobon with some enhancements.

The other really good C compiler is GCC, but it's not the easiest thing to
install.

Gemulator is entirely software emulation. The only reason the card is
there is for the TOS ROMs, which Darek claims is the only legal way to
distribute them. Strange though that his Atari 8-bit emulators don't
follow this policy, and distribute the OS on disk.

Darek claims that the reason he didn't include a card with a
68000 is that the software emulation is faster, makes sense, but a 68060
card would be nice! :)

RealAudio is a piece of internet software (Netscape or IE plug-in) that
allows you to listen to audio files whilst browsing sites. It's an audio
streamer. The playback modules are free, but a licensing fee is required to
put the stream encoding software onto your server.

No, it's not available for any TOS platforms, although it should be
relatively easy to implement for STe and up (once the proprietary format is
figured out).

Hi there...

The subject line says it all. Does anyone know of any attempt by CompDirect, or any other of the companies now producing 68060 Atari compatibles, to have libraries made that support the 060 for compilers like Lattice C, pure C, Devpac etc...? I would really love to buy a beastie like one of these just so I could compile POVRay to run under native 68060 :).

L8R,

: the windows able to display and manipulate text according to vt52.
: Anyone know if there is a way to make these windows vt100? Perhaps
: an addition to the term cap?

My understanding of termcap files was that they're so that programs (I believe it started with vi, but others use it as well) don't have to have support for different terminals hard-coded in. I think termcap is some sort of standard look-up table: If the program wants to know what, say, a left-arrow key, is, it looks in the termcap file for the terminal being used, and finds the corresponding left-arrow key code. If my understanding is correct, then, there's no way to get GenevaTOS to display VT100 commands, other than Dan Wilga upgrading it.

: Is there a GOOD PD C compiler available, that is also simple to install?

I've got SozobonX (an enhanced version of Sozobon 2.0) on my hard drive,
and I'm happy with it. Installation was dead simple: download the file,
unzoo them, and set some environment variables. It appears to be quite
fast (although everything appears fast on my TT :)), and it seems
half-decently smart (but not as smart as I would like). It can be found
on ftp.fu-berlin.de, I believe in /pub/atari/programming.

Your ignorance and smugness is showing.

One learns a lot about languages by learning Latin. Learning Latin does
not preclude learning other languages. Learning Algol 68 *will* teach
you quite a bit, and does not preclude learning other languages.

Yes, in fact they've made it easier with a little switch at the back
that you can click on a rotate the SCSI ID setting - a bit like a
car odometer (with 1 digit).

I will check HDUTIL - don't recall anything there related to setting SCSI
ID, just bypassing ones you don't want to use.

One does, does one? Glad to be enlightened. One should also realise that my comment was not simply sarcasm, but since you took it that way you must be thinking defensively ;-)

There is a place for all this historical stuff, whether studying Latin or Algol, and the parallel seems to hold some reality even if the timescale is somewhat different. But there is also a place for developing new things. My original comment was effectively that you can learn what not to do by studying the past as well as what to do, and people can choose. The way people interpret posts often says more about them and their hangups than it does about the poster.

> Learning Algol 68 *will* teach you quite a bit, and does not
> preclude learning other languages.

Learning Algol W certainly taught me the Basics :-) I am not sure how much I learnt from Latin, but then again I wasn't too interested in it. Actually I don't recall being too interested in Algol at the time but that's another story. There is an opportunity cost in learning anything. A lot depends what you want to do and why.

4734. EXABYTE EXB-8200 SCSI Parameters

Newsgroup: comp.sys.atari.st
Date: 1996-06-18 00:00:00 UTC
From: sobek@irit.fr
Message-ID: <SOBEK.96Jun18104423@dusty.irit.fr>
Source record: 143219
Cross-posted to:
comp.sys.atari.st.tech,comp.sys.atari.st,fr.comp.sys.atari,comp.sys.sun.hardware,comp.sys.sun.misc,comp.sys.misc

I am trying to connect an EXABYTE EXB-8200 SCSI drive (from a Sun) to
an Atari Mega 4 STfm. And I am trying to use the drive with the GEMAR
tape software.

For this I need certain SCSI parameters (as the default values do not
work):

SCSI Options:
Load Time 240 sec.
Rewind Time 240 sec.
Space Time 1200 sec.
Wait before SCSI 2 ticks
Wait after SCSI 3 ticks
Data Timeout 30 sec.

Streamer Commands:
Test Unit Ready yes
Mode Sense no
Mode Select no
Load/Unload yes
Lock Tape no

Quick File Access:
None yes
Seek
Locate

Currently I can load and unload tapes, but I get timeouts when trying
to write to the tape.

Please reply by e-mail and I will summarize to the net if interest
warrants.

Thanks to all.

>
> Ah, like studying Latin instead of its derivatives.

No, because natural and synthetic languages aren't comparable. The usual (tacit, perhaps, but present nonetheless) claim of the Latin enthusiasts are that languages derived from Latin are less ``pure'' in some sense and if only you could add (insert your favourite here) back into the derived language, or delete (insert your favourite) the language would be ``better''. Hence all the nonsense about not ending sentences with prepositions, or not splitting infinitives, and all the other attempted Latin-ate prescriptions. This argument is a waste of everyone's effort, because languages are not subject to ``design''. It's also a waste because English owes a lot to things other than Latin, of course, but that's besides the point.

The point here is that Pascal and its friends were derived from Algol partly for reasons that no longer apply. Do we need a language that can be compiled with a one-pass compiler using an LL(1) parser, for example? Of course not. A lot of deep thought went into A68, which was discarded later for implementation reasons. We now can run '68 compilers on any machine you can think of, so perhaps we should re-consider some of those decisions.

In the same vein, interpreted and semi-interpreted languages were impractical for large systems in the seventies and eighties because there wasn't enough bang available. LispMs, Xerox D- machines and so on were expensive and awkward not because the languages were weak, but because it was hard to make machines fast enough. Interpreters got a bad name from that, but we should go back to the original work to see the reasons.

Tony Smolar wrote:

> The other really good C compiler is GCC, but it's not the easiest thing to
> install.

The easiest waz to get it running is getting the KGMD basic and compiler package. The installation of KGMD is verz easy (as long as zou understand german), but this is a brute force method to get a compiler running. It needs a whole empty partition, and it will install not only a compiler, but a unix-like System including a compiler. If you also install tham manual package you get a good documentation as well. So if this is not too hard for just a compiler try it...

I am not going to join in name calling match.

Believe it or not, you are not the only one posting messages on the net.

Ok, let's forget the time, for now, and talk about the wasted storage space. How many messages are posted, daily, on the net? Let's say there are 2,000 news groups(I think there are more). Let's say there are 2,000 news sites, world wide(maybe more, maybe less). Let's say each group gets 5 new messages daily(I'm pretty sure most get many times that). OK, 120 wasted characters per message. That's 2 bytes per character, times, 120 characters, times, 2,000 newsgroups, times, 2,000 sites, times, 5 messages. That's 2.4 giga bytes daily, times, 30 days per month, DO the math. That's a fairly substantial WASTE of bandwith.

Bill

. Ada deserves to be considered as the legal successor of these values.
. The Ada culture is widely misunderstood because of prejudices.

yes, but you are erring in the other direction. the ada culture is
not likely to be widened by people enthusing about it to the extent of
damning everything else; forth tried that, and very quickly found
itself ignored.

. People often judge on the basis of misconceptions and therefore
. are not aware or simply ignore a lot of interesting facts:
. For example, today you can have a free Ada95 compiler for
. any platform from GNU, which even runs multitasking under DOS.

so? like every gnu product, it's unstable, buggy and a memory hog.
there are no other free ada95 compilers, and certainly none that will
run on somewhat slimmer systems; there are free pascal, c, and even
algol compilers that will.

. I doubt that there are people who will waste their time with
. a language which is 30 years behind.

except that if you look at algol 68, it is not 30 years behind at all.
concepts in procedural programming language haven't advanced very much
since the 60s, except for the development of object-oriented
programming, and even ada95 is only half-hearted about that (much as
oberon is).

I put an STFM into a full tower case; the PCB is the same size as the STE,
so you should be able to do this also.

It depends on your full tower case, but I was able to squeeze the STFM
into the space between the case chassis & the outer shell.

I had to drill holes & put in some standoffs, but it leaves loads of space
for disks, & there is still room to put in a PC motherboard (no reason
to.... but there is room).

I was not able to purchase an external keyboard, so I wired up the the
original STFM keyboard (still in the STFM case) to the tower via cable.

I wired up the monitor to a three pin flying mains sockets, so the tower
mains switch controls everything.

Hi John,

John W. Redelfs (ksjwr@merlin.acf-lab.alaska.edu) wrote:

: Can someone help me with a problem I'm having? whenever
: i download a game for my atari st 1040, in LHA
: format, it always messes up when i start it...the screen
: starts flickering up and down very fast, basically
: making it unplayable.
[I took the liberty of doing some line breaking here]

: Can anyone give me any help on this one?

Eh? With archives, such as LHA, there are two possible problems.
Either they don't unpack correctly, leaving you with a program that
will not run, or much more rarely run faulty, or they do unpack correctly
but contain something that has problems of its own. I can't figure
out which is your problem.

Could you please be a bit more specific?

Greetings,
Erik Meltzer

Hi, Jeff.

ArmstrongJ (armstrongj@aol.com) wrote:
: hello. I bought a 1040 STf system for $25 (yes, only $25), complete
: with an SC1224 monitor. Is this machine worthless?
No, not by a long way. Don't care about those who'll tell you it is.

: I would like to
: upgrade it, but it runs TOS 1.0 and can't seem to run jack. I tried that
: internet package and it doesn't work. Could someone please tell me how to
: upgrade it? I constantly get replies telling me I need expensive
: hardware.
You will *absolutely* need a new TOS no matter what. Try for TOS 1.04
or 1.4 (they're the same), because you can plug these into your machine
without any adaptor. It comes in either 2 or 6 ROMs, so take a look into
your machine to see which you need. You should be able to get it very
cheaply. This cannot be avoided if you want to do anything with the
machine. You might choose to get TOS 2.06 instead, but this will need
an adaptor board because it uses 256k of ROM instead of 192k like the old
ones. Its major advantage over TOS 1.x is its better desktop, but you
can use a replacement desktop instead, and most of those are better
than that of TOS 2.06.

: What I would most like to do is add a hard disk and possibly make
: the screen look nice. The GEM desktop is the ugliest, most non-functional
: GUI I have ever seen (at least the version I have is). There are a total
: of 3 types of icons and there are no fonts or anything.
Once you have the new TOS, get a replacement desktop. This will leave the
general look and feel to GEM, but offer many new possibilities. Also,
I'd strongly recommend that you purchase NVDI. This will give you more
fonts and a *much* faster overall response. It will cost you a bit of RAM,
though. Which desktop you get is a matter of taste really. Names that
come to mind are Thing, Gemini, Ease, NoDesk, TeraDesk. I've tried the
first three, of which Thing IMHO is the best. Thing is Shareware,
Gemini "free Shareware", Ease commercial, of the rest I don't know.
You need not worry about the replacement destops' RAM consumption, although
with some it approaches 1 MB, because most offer the option of leaving
the desktop program on starting another program, and restarting the desktop
program on leaving the other program. This works fine with Thing, Ease,
and Gemini. Of the others I don't know.

: Whenever I ask
: about a HD, everyone says I need an adapter that cost $90. Didn't anyone
: ever make a HD that plugged directly into an ST?
Atari did. ;-) Depends on what size you need. For the beginning,

you sure can make do with 30--40 megs. Then my advice would be to get an old Atari Megafile 30 or something like that. It's loud and slow, but therefore it should be cheap. I wouldn't spend any more than $50 on one of these. If you have higher wishes, try to pick up a used ST hard drive from someone who upgraded to a TT or such like. These need the mentioned adaptor because the Atari's hard drive port is almost, but not quite, a SCSI port. With such an adaptor you can use any (well, almost any) SCSI hard drive. It is true that a new adaptor is expensive, so try and get a used hard drive. You can always upgrade it by plugging a new SCSI drive into it, so don't care about its size when the price is right.

: And how can I get a
: better floppy drive. 720K doesn't cut it.
There are floppy upgrade kits, but I don't know too much about that because my MegaSTE was fitted with HD disk drive at the dealer's. Anyone jump in?

You could also keep your ears open about a RAM upgrade. Maybe these tend to get affordable now. With 4 megs of RAM, you could use multitasking operating systems on your ST. Yes, it *is* fast enough. If you happen on an upgrade, you might even spare the new TOS and go for MagiC instead. This gives you preemptive multitasking, long file names (in its latest version 5.0), and an actual speed increase even over TOS 2.06. But you won't be happy with it with less then four megs of RAM.

: Thanks for any help!
Hope I did help. If there's anything unclear, email me.

Greetings,
Erik Meltzer
(melsh94@ux-01.ha.bib.de)

4754. Internal HDs in Falcon and STe

Newsgroup: comp.sys.atari.st

Hi!
I would like to know if there are limitations on the drives that you can use internally in Falcon and/or STe computers. There was some mention in an earlier post about the inability of the Falcon power supply to provide enough juice for certain drives. I am thinking that in the near future I will consider replacing the drives that originally came with the machines with something bigger. If you know of brands and models that work (by which I mean, plug and play, no fuss), with capacities >150 Mb, please post or e-mail me.

Gustavo

Have you checked that each drive is given a different identity number ? This is
essential in order to daisy chain two or more drives

d> place that might?

Try Nick Harlow (16/32) at nharlow@cix.compulink.co.uk - he's got 4 types of Nova VME cards ranging from 299ukp to 699ukp, all of which give 16-bit graphics at decent resolutions - I think 640*480 for the cheapest, up to (at least) 1024*768 nearer the top end.

oReM ST v2.2 by Comnet Systems (Matthew R. Singer)

I ran this BBS for several years in the late 80's (a really quality BBS). I recently developed a need for a small BBS at work and dusted off my FoReM package. Everything seems to work fine EXCEPT;

I will be connecting with a portfolio.
The default page/screen length is 11

The screen length can be changed from 11 to ? but not below 11 (or is it 12?) in any event I need a screen length of about 6

Is Matthew Singer out there anywhere or does anyone have any suggestions?

Thanks

4767. Remapping USA TT Keyboard onto a UK Falcon.

Newsgroup: comp.sys.atari.st
Date: 1996-06-18 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <70543783_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 143252

I've just purchased an American TT keyboard for use with my UK Falcon. The installation has gone well and the keyboard is installed hardweare wise perfectly.

I'm set my NV-RAM to use the US keyboard layout, and it's perfectly mapped appart from the SHIFT 4 key. This should give a £ on the UK keyboard, and a $ on the US keyboard. All is great excepting the US keyboard layout still inssits the SHIFT 4 key is a £ and not the $ as expected.

To get around the problem I've had to install Harlequin III on my Falcon again, and am using it's inbuilt remapper to remap the SHIFT 4 key to $ (an remap SHIFT 8 to £ for my own use).

I'd prefer not to have Harlequin installed at all, but can not find anything else that works both under TOS as well as under MagiC 4.

I did obtain version 1.3 of CKBD.ZIP from CIX and gave it a go at remapping the keyboard, but that did not seem to work at all unfortunately.

If anyone does know of an alternative CPX (or other program) which will remap the keys under TOS and MagiC 4 on a Falcon it would be most appreciated.

If you don't want it, I'll pay you the $25 plus shipping for the machine and monitor.

4773. FS: StereoTek 3D Glasses

Newsgroup: comp.sys.atari.st
Date: 1996-06-18 00:00:00 UTC
From: a00121@alumni.laurentian.ca
Message-ID: <1996Jun18.155045@alumni.laurentian.ca>
Source record: 143258

I have two pairs of StereoTek: Three Dimensional Glasses that come complete with software, manual and plug-in module within their original boxes. None of the equipment is damaged but I'm not sure if it still works or not as I haven't tried them since 1987 or so and don't currently have the means to do so.

Please contact me at a00121@alumni.laurentian.ca if you're interested in making an offer

Dave

Rich:

I agree with you completely. I am paying for access as well but I'm certain that a few measly bites of software description lines are the least of the internet's worries. Even with my pathetic by today's standards 14.4kbaud connection into the internet, those lines your software is adding take a whole of about 0.1 seconds more per message. OH MY! This is plainly unacceptable and must be censured! (Note: sarcasm.)

Furthermore, I intend to develop a similar product for my own BBS software and I am glad (selfishly almost) to see you have already taken the brunt of a discussion I knew was bound to develop.

I'd like to buy a 4Mb Falcon with or without HD (but preferably with),
and am willing to pay somewhere in the range of $300 - $450.

(I barely missed two previous deals, so I'm hoping the third time will be
a charm.) :)

Thanks in advance.

I don't know if you're looking for something like this, but there is a
accessory that is a complete VT100 terminal. It's called Miniterm. I
use it from Stalker with IRC from a Unix account so it works well. It's
full screen and not a window however. I've been looking for something
like this for a whole year. Anyways, it can be found at a Umich site
under Telecomm. Hope this helps...

To add to that, the reason that a laptop version was made is because it can just MagiC which is on a disk. Now you don't need a TOS and card just to run MagiC which replaces the whole thing anyways. Now if STonX just ran only MagiC which is leaglly bought, would that still make it a pirated program? :)

>Strange though that his Atari 8-bit emulators don't

b> characters, times, 2,000 newsgroups, times, 2,000 sites, times, 5
b> messages. That's 2.4 giga bytes daily, times, 30 days per month, DO the
b> math. That's a fairly substantial WASTE of bandwith.

OK, I follow your argument. I assume you have sent messages to the other 20 million users on the net who are also using sig files? I'll quit when they do.

As far as storage space goes, service providers should be aging their news storage automatically. My lowly Mega STe is set for a maximum age of 15 days or 500 messages per newsgroup, whichever comes first.

Also, your technical information is incorrect. Each character requires only one byte of storage (less on some operating systems, since each character is only 7 bits and some systems crunch the data). The news isn't stored at every system, either, although there is substantial redundancy (the Internet was designed to survive a nuclear strike, which meant that all data should be stored as many places as possible, and every system should be accessible by multiple routes).

Now, I won't get (back) into name-calling - but I really think that, if this is the biggest problem you can think of, you should seriously consider getting a life. Most people on the 'net use sigs. You aren't going to change that, but harping on it is going to SERIOUSLY piss off a lot of us. If

you want to change something, try getting the spammers to stop - that should keep you busy until Wes Cooley gets elected President.

4787. FS: Cool ST stuff for sale/trade

Newsgroup: comp.sys.atari.st
Date: 1996-06-18 00:00:00 UTC
From: boyd@zeno.math.fsu.edu
Message-ID: <4q50jr$si7@news.fsu.edu>
Source record: 143272

- Highlights -

Moniterm 19" 1280x1024 monitor, with graphics card for ST!
Super cheap full-page scanner!
Syquest 44mb removable-platter hard drive, and 15 cartridges!
Some of the best games ever written for the ST, including descriptions!

Below are a bunch of ST items I want to sell or trade. For buyers, highest reasonable offer gets the item, with preference going to those that buy more than one item. Shipping will be negotiated with the offer.

As for trades, let me know what you have and we may be able to work something out. Cash can make up for deficient trade material from either party. Shipping will be negotiated with the trade (though for trades, I often suggest that both parties eat the shipping). Don't be shy, send me some email and let me know what you have to trade.

With respect to trades (or outright purchases by me), I'm particularly interested the following items. Please email me if you have any available.

1. Lynx systems, games, accessories.
2. Jaguar systems, games, accessories.
4. Laserdisc player.

So, maybe you see something you want, but you don't have any money and no extra computer stuff to trade? Well, you still might have some trade items I'd be interested in! I'm into home/car audio products, video and laserdisk stuff, PC computer thingies, radio scanners, high quality power tools, firearm and other weaponry stuff, Nokia 232 cel phone accessories, digital and alphanumeric pagers, headset and 900mHz cordless telephones, and NordicTrak exercise machines.

All of the items below are original commercial products owned by me. Unless otherwise noted, all original boxes, manuals, and disks are included. I have cheats for some of the games, and will include them with the sale/trade.

PLEASE MAKE ALL REPLIES VIA EMAIL.

****Hardware****

Moniterm 19" 1280x1024 paper-white monochrome display, absolutely the best way to do DTP (and just about any other kind of serious work) on the ST. Comes with the special video card that plugs into the Megabus on MegaST machines, plus software drivers. Case is cracked in a couple of places, but still perfectly functional. Requires TOS 1.4 or higher. Virtually all "serious" software supports the

higher resolutions without modification (all GEM compliant programs
are supposed to check, and most do). The desktop is HUGE, equivalent
to slightly more than 4 normal monochrome displays. For DTP users,
you can see two full 8x11 pages side-by-side at actual size. The
display is sharp and easy on the eyes, like a well-adjusted SM124.
Shipping costs would be nontrivial on this item, as it weighs a ton.
This is definitely "poweruser" material. Unless you have some sort
of custom graphics card, you MUST have a MegaST machine (not MegaSTE)
for the included graphics card to work (of course, I happen to
have.... :-).

Mega2ST, mint condition, 2mb RAM, TOS 1.2 installed, has internal Megabus
connector for Moniterm video card described above, detachable
keyboard, original box and docs included. I'll also throw in a
really nice keyboard drawer/computer stand made of teak wood (not
some cheesy veneer, solid teak). It is sized perfectly for the
MegaST keyboard.

Img Scan, optical scanning head that attaches to most dot matrix print heads
to produce a scanner. The printer is used to position the material to
be scanned, and is capable of very high accuracy. Great way to start
playing with scanning technology. Several versions of the software
included. Plugs into the cartridge port.

Syquest SQ555 44mb removable platter hard drive, fully supported by all Atari
hard drive software. Standard 50 pin SCSI interface, 5.25 half height,
bare device.

Syquest 44mb cartridges, made by Syquest. I have 15 of them, no bad sectors,
factory plastic library case included with each.

Quantum Prodrive 80S 80mb 3.5" hard drive, standard 50 pin SCSI.

Seagate ST296N 85mb 5.25" half height hard drive, old and huge yet reliable
as a rock (for me, at least, as it was my first drive :-).

****PC Hardware****

Adaptec 2940W PCI Fast-Wide SCSI-2 disk controller, one of the fastest SCSI
controllers available for the PC, OEM version, still factory sealed
(i.e. totally unused). Includes card, cable, manual, driver
software. Supported by DOS, Windows, Windows 95, Netware (Novell),
Solaris x86, Linux, etc. This card provides connections for both
Fast SCSI-2 (50 pin) and Fast-Wide SCSI-2 (67 pin) devices.

****Application and Utility****

ExtenDOS v.1.21, software to allow use of standard SCSI CDROM drives on Atari
ST machines.

Tempus v1.x, excellent text editor, not as good as Tempus II, but no slouch
either. Blazingly fast (hence its name), even on a box-stock 8mHz
system. Designed for programming, great for general editing as well.

TurboJet, Neocept, fast GDOS print driver for HP Deskjet and Laserjet printers, includes a bunch of 150 and 300dpi fonts. Claims to be 200-500% faster than other HP drivers (for that time, I don't know if there are faster ones out now).

Microsoft Write for ST, buggy WYSIWYG word processor, the only Microsoft product ever made for the Atari that I know of, includes a full copy of Atari GDOS. Can be run from floppies and a ramdisk (Jeez, did I really do that? I must have been really patient back then :-). I managed to produce a bunch of papers and letters with it using only a floppy and color monitor, so it is usable, though certainly not state of the art.

CAD 3-D v1.0, Antic, original disk accidently laundered (don't ask :-), includes original docs plus backup floppy. This is not really for architectural design (i.e. Dynacadd or Autocad), but to make nifty 3D animations for fun.

****GAMES****

Games marked with a * are, in my personal opinion, really killer games. No ST game collection should be without them. Games that are known to not work on MegaSTE machines are marked "No MSTE".

* Operation Thunderbolt, sequel to the arcade game with the plastic Uzi submachine gun mounted on it. Uses mouse for control, excellent "blast everything" game. Great explosion and gunshot samples.

* Vroom and Vroom 2, my favorite ST driving game, uses mouse for all controls, nice filled vector graphics, very very fast.

* Speedball 2, bionic-enhanced brutal futuristic football, excellent two player simultaneous game.

* Robocop 3, awesome ST arcade game, includes a combat driving game, 3D third-person fighting game (virtua-fighter style, though not as pretty), and a Doom-style 1st-person shoot'em up phase (no texture mapping, bummer). Great game. STe enhanced.

* Menace, Psygnosis, side-scrolling "blast everything" game, very fast, very good. This is the precursor to Blood Money.

* Hard Drivin 2, 3D filled vector driving game, stunt and racing tracks, can play via serial link with ST, Amiga, or IBM PC versions of the same game.

* Armourgeddon, Psygnosis, excellent combo-game, battle a variety of enemy craft in a huge virtual world while piloting hovercraft, tanks, jets, gunships, or bombers. Cool combination of arcade action and strategy. Two player cooperative play via serial link, really cool that way.

* Wanderer 3D, super-cheesy game with one overwhelming redeeming feature: 3D glasses are included. Pretty nifty, though you will go blind if you play too much :-).

* Super Hang-on, one of the best motorcycle racing games for the ST.

* Gold of the Aztecs, platform game with huge sprites, great graphics and sound.

* North and South, strategy wargame with lots of tongue-in-cheek humor, based on the popular French comic. Very well done, and can be configured to play itself. Really shows off an ST.

Driller, 3D filled vector first person arcade adventure, huge game space, similar to Descent on the PC (no texture mapping, of course).

* Stunt Car Racer, One of the best car racing games for the ST. Two player null-modem game is excellent. Original disk, xeroxed docs (I lost my original docs).

Blacklamp, side-view platform game. Collect all the lamps to fight the dragon. Excellent graphics and gameplay.

Barbarian II, This is the sequel to Deathsword, the one or two player sword-fighting game. It is not the Psygnosis adventure game. This is a blood and guts action fighting game. Excellent.

Double Dragon, one of the first beat'em-ups for the ST. Dual player mode is cool. Multilevel side-view platform fighting game. Good. Original disk, no docs/box (unneeded for the game).

Awesome, Psygnosis, Several different types of action game rolled into one. Excellent shoot-em up game, graphics, sound, and gameplay all first rate. This one really shows off the machine.

* Wrath of the Demon, side-view scrolling action/adventure, excellent graphics, sound, and gameplay. Four disks (!), extremely challenging, STE enhanced. This is another one that really maxes out the ST/STE hardware.

Swiv, overhead view jeep/helicopter shoot'em-up. Simultaneous two player mode, STE enhanced graphics and sound (will work on ST as well).

* Jupiter's Masterdrive, Ubi Soft, excellent excellent overhead-view driving game with guns. Drive on the moons of Jupiter. Extremely cool simultaneous split-screen two-player mode.

* Alien Syndrome, overhead view scrolling shoot'em up, lots of fun for two simultaneous players. Plenty of fast and furious shooting, lots of weapons, little droids that follow you around and help you out, big ugly aliens, etc. Great game.

Captain Fizz Meets the Blaster-Trons, Psygnosis, sort of like a Gauntlet II in space, best with two simultaneous players (screen is split to give each player their own view). Overhead view, destruction galore.

* Baal, Psygnosis, Excellent platform/adventure game (mostly arcade action). Future setting, sideways scrolling, large sprites, good guns. This is a pretty hard game, but lots of fun.

Sidearms, Capcom, scrolling sideview shoot'em up, mouse controlled, lots of weapons and powerups. Great "mindless destruction" game.

Enduro Racer and Crazy Cars, combo pack, no docs, Enduro Racer is a cross country motorcycle racing game, Crazy Cars is a racing game. Both are OK, though quite old.

Super Cycle, Epyx, no docs, oval track motorcycle racing.

Eliminator, strange driving/shoot'em up game, lots of different weapons and bad guys.

Frostbyte, Starsoft, side-view platform game, I would recommend it for a small child (in terms of its difficulty). A bit boring for us big children, IMHO.

President Elect 1988 edition, SSI, presidential election simulation, graphics are quite lame (mostly text, in fact), but I suppose a political process fan might like it. It does not appear to be particularly tied to the 1988 elections, and has data for US elections all the way back to 1960. Can apparently be used to predict elections as well.

****ST Action Magazines (with coverdisks)****

Issues available: 26, 43, 50, 51, 53, 54, 55, 56, 57, all include coverdisks.

These mags are great for game fans. The reviews help one avoid poor games and select good ones, plus there are cheats for the games, how-to-play guides, and useful non-game related articles (hardware reviews, expansions, etc.). Also, they all have a "best ST games to date" list in them, which is a great way to select the "best of the best" when game shopping (for example, from discount houses who only list the names of the products, with no descriptions). Finally, the cover disks that come with the mags provide demos of games (so you can try before you buy), plus full PD/Shareware games and other software. Most come with two disks.

Also available: three ST Action binders, each will hold about 12-14 issues without any damage or modification (wire-in-the-middle style) and make it convenient to leaf through the mags. Sold/traded only as a group. These are well made, nice looking binders with the ST Action logo on them. Will hold any of the large format UK magazines (A4 size, I think).

> : requirements? How well/fast does it work? Any incompatibilities?
> : Thanks in advance.
> : Gustavo

I use Outside on my 14MB Falcon, and it seems to work just fine.
I can barely notice a difference in speed between not using Outside, and =

using it - of course that may be because I haven't done a _lot_ of work =

that needs more than 14MB RAM. The most memory I've needed is 35MB.
As far as hardware, I think all you need is a 68030(for the MMU) so a =

Falcon or TT would do it. =

No incompatibilities that I've run across yet, although you have to =

tell the program about Calamus and it's modules so it can take that =

program into account. I've turned off the virtual memory options in both =

CalamusSL and DA's Picture.
Also I use HD Driver, as I was told that it works with Outside much =

better than ICD, no surprise considering Uwe Seimet is responsible for =

both :^)

s> prices, it probably cost closer to $600.

The following press release came out from Titan Designs on 31st May 1996 -not much more than $200

==========
Titan Designs smash the £200 barrier for 14MB Falcon upgrades
(shock, horror, probe!)

Yes, with the recent fall in memory prices we can now offer the following SIMMs:

* 16MB (4MBx32-bit, 60ns) SIMMs £149.00 !!!
* Falcon Memory board £39.95 !!!

Total £188.95

In addition, the following prices are applicable;

* 4MB £37.00
* 8MB £75.00

The 4MB & 16MB SIMMs are suitable for standard Falcon (with memory board), Afterburner040, and PCs.

The 8MB SIMM is only suitable for Afterburner040 & PCs.

All prices include VAT and carriage.

y> 2.06)
y> I can use each drive seperately:
y> No problem. However when I connect the 2nd drive then strange things
y> happen. The setup becomes:
You should be able to get this working.

You don't need to have partition sizes the same on each drive, the only real
limitation is that you are limited to a maximum of 14 partitions over the
drives, unless you want to "hide" some of the partitions.

Each drive must have its own ID set AND that number MUST be enabled in the
ICDBoot.sys file. It sounds to me that you have a hard drive booter prog on
your second drive as well, that could well be the source of your problem.

Speak to 'ya later!

Talk to me I'm interested in helping out too. I'm in the midst of setting
it up as well.

d>
d> I have Spectre 3.0, with all the necessary hardware and Macintosh 6.0.5
d> diskettes. The drive cable is in, the system boots, and the software
d> (Spectre) works. I've loaded it several times.

Good I've got that far too. I don't have the Mac disks though. i think the
ones from the apple.support. archive don't work for some reason ? I'm
trying to get some good ones at the moment. Let me know if you have any
luck. I may try the apple archive later .. Whats the address/file details
?

d> However, 6.0.5 won't stop crashing on me, and I don't know why.
d> Basically, here are the scenarios I've tried.
d>
d> Under my standard setup, with Xboot, Selectric, etc. the system crashes
d> after I try to do anything. For example, just selecting "About the
d> Finder..." after booting off the 6.0.5 floppy crashes out, and says A
d> System Error has occured, ID=15.
d>
d> Under a blank setup, with Xboot loading nothing (other than ICDBOOT.SYS)
d> the system crashes, but later. Fox example, I can run "About the
d> Finder...", when I open the "Setup Readme" on the installation disk I can
d> read it, but when I close it I ge the same crash as described above,
d> except the system said "The following programs have become corrupt:
d> Finder".

Could be the ICD system. It's not very compatible as HD Driver etc. Mail
me to discuss this.

d> When booting off a floppy disk and then running the software, the system
d> seems even more stable. Apple SC HD setup can easily crash the system.
d> Maybe it should -- but it seems to recognize no HD, and then goes on to
d> crash the system when the program shuts down with the ID=15 error
d> described above.

yeah looks like the Driver software !!

Contact me and we can sort it out.

Yours

s> how to set the two up so that the Mega HD is the boot drive
s> (partitions abc) and the Megafile is a slave (partitions f,g,h,i). ASm
s> I goiung to have to re-format the Mega?

I should try altering the SCSI id of the external drive, the mega should be
ID 0 AFAIR, so anything above that on the external Host adaptor would prevent
an ID clash.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

4801. Wanted: Tree Saver or Double Column

Newsgroup: comp.sys.atari.st
Date: 1996-06-19 00:00:00 UTC
From: csjjh@ux1
Message-ID: <Dt9Gpp.73n@news.cts.eiu.edu>
Source record: 143164

I'm looking for the full fledged version of either Tree Saver or Double Column that lets you print in condensed mode the equilivant of two pages on each page, page one on the left side and page two on the right side. I've got the demo versions but they don't let you print documents longer than 6 pages or so. Any help finding these would be appreciated.
Thanks,
JJH

Personally I can see both sides of this argument, big sigs can be a
pain in the arse, especialy the ones from BBS's that contain the
posters sig, followed by blank lines, followed by the sig from the BBS
software,
Sigs with utter drivel or wasted space are another pain in the arse,

But a sig that says something should be ok surely, my sig is larger
than the usualy acceptable four lines,
But if my sig simply contained my name or whatever, then you would
not have much of an idea about me, I think you will agree that even
though my sig is big, it at least gives lots of information :),

If I see a big sig with plenty of info, then great, but if I see a
big sig full of crap or blank lines between info, then not so great,

There ! i had my say,

PS I never send messages that are smaller than my sig, and my
software won't deliver mail that has more quoted text than written,

Cheers.............!ynoT

Erm... how do you mean it times out? It disconnects after a long time?

If it gets your address and writes it in the $GET_IP: box at the bottom,
it's worked. Run CAB.

If, however, it sits there saying "waiting for ...." then disconnects,
your dial script (dial.scr) is in need of attention.

Yours etc.

The thing that seems to work is to increase the RAM Cache to as much as the system will allow. Especially as you are being escorted back to the desktop. The reason will be the page you are trying to download will not be able to store the images in the size of cache you are allocating.
Hope this helps.

Date: 1996-06-19 00:00:00 UTC
From: am3@ukc.ac.uk
Message-ID: <15677@gos.ukc.ac.uk>
Source record: 143173

For sale: Atari STE 1MB GPB80, ONO

Good condition. Includes mouse and joystick. I've a few ST Format coverdisks and one game (Space Crusade) to go with it, but that's about all.

I can't deliver anywhere outside the Canterbury area, but I'll consider paying postage costs.

Alistair

>center of the screen.

I'm not too sure of the solution but I can tell you why it's doing it!
The reason it does it, is the tube is not getting enough power...
If I've got this right, this is supplied by the line output transformer,
so the problem will be to do with this, usually a big black box with a
lead coming out of it which is connected to the tube, this either has died
and needs replacing :(, or if your lucky you just have dry joints :)
This could also be caused by some components supplying the LOPT,
capacitors are good at causing problems like this, again dry jointed
or dead.

Hope this helps...
Ade.

Yea, but the Atari OS hasn't really advanced since 1985.. I could argue that System 6 which is memory lean but lacking many functionality that we Mac users take for granted in in 1996 with System 7. I call it progress. 16 megs was alot in the 1980's and with a higher prices but is the bare min. in 1996. Well system 6 still makes Tos look and feel generic.

> go ??

In the U.S. 72 pin 16 megs will cost around $160.. So memory is a non issue.

What is this Skyduel game all about? I'm interested in downloading it,
but I seem to have a lag getting through the Demon Internet site. Would
this be on the Umich site as well? Thanx :)

From: comezana@math.psu.edu
Message-ID: <4qa184$qkn@dodgson.math.psu.edu>
Source record: 143179

Well, I just got my new Falcon, plugged in an SC1224 monitor and found that in interlace 80 column modes, the picture flickers like crazy. I mean, it's as if the display suddenly got Parkinson's disease... Is this normal? Are there any fixes? Is there something I can or should adjust to make the flickering more tolerable?

Please help!!

Gustavo

It seems that every time I am contemplating the purchase of a
GEMulator, Darek opens his obnoxious mouth and discourages me...

4819. Mathematica

Newsgroup: comp.sys.atari.st
Date: 1996-06-19 00:00:00 UTC
From: hyc@frisky.la.platsol.com
Message-ID: <4qa57q$18lk@frisky.la.platsol.com>
Source record: 143182
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

The following message was sent to us on the mint-request list. It's been a long time since I've used Mathematica, but I figured folks on these newsgroups may have some opinions to pass along. I don't even know that it's entirely relevant, since there was never an Atari Mathematica port that I knew of. (Maple was kind of useful though...) Perhaps if you want Wolfram to do an Atari port, you can tell them now...

Date: Wed, 19 Jun 1996 18:05:29 -0500 (CDT)
From: mpjones@wolfram.com (Michael Jones)
To: mint-request@terminator.rs.itd.umich.edu
Subject: Software question
Precedence: Bulk

As part of Wolfram Research's continuing efforts to enhance the utility of Mathematica in mathematics research and education, I have been given the task of understanding as much as possible about software usage in the mathematics community. As a result, I'd very much like to know whether you currently use Mathematica, and if not, what kind of software, if any, you do use. I would also be very grateful for any suggestions you might have about Mathematica and its role in the mathematics community.

Thank you very much for your help.

-- Michael Jones (mpjones@wolfram.com)

P.S. If you haven't seen the latest information on Mathematica, you might want to check out http://www.wolfram.com/math/xmxc.

Get a VGA monitor, they are cheap... if you can't afford one, turn down
the contrast and brightness, and try to avoid black/white colour
combinations.

Source record: 143188

armstrongj@aol.com barked in U.COMP.SYS.ATARI.ST on 19 Jun 96:

a> hello. I bought a 1040 STf system for $25 (yes, only $25), complete
a> with an SC1224 monitor. Is this machine worthless? I would like to
a> upgrade it, but it runs TOS 1.0 and can't seem to run jack. I tried
a> that internet package and it doesn't work. Could someone please tell me
a> how to upgrade it? I constantly get replies telling me I need
a> expensive hardware.

It's for sure you can't upgrade anything - including a Packard Bell PC (make that "especially" a Putrid Smell) without spending money.

a> What I would most like to do is add a hard disk and possibly make
a> the screen look nice. The GEM desktop is the ugliest, most non-
a> functional GUI I have ever seen (at least the version I have is). There
a> are a total of 3 types of icons and there are no fonts or anything.

For the desktop, get TeraDesk - I think it's up to version 1.41 or thereabouts now. It's freeware, comes with about 20 or 30 icons, and supports up to 255 of the little boogers, I think. I have a package of some thousand or so icons for TeraDesk that I assembled a couple of years ago.

Regardless of what you do about the desktop, buy NVDI - it will speed up all graphics operations and allow the use of GDOS fonts. I think the latest version even uses TrueTye (e.g., "Windows") fonts, and loads/unlaods on demand.

a> Whenever I ask about a HD, everyone says I need an adapter that cost $90.

If you want any kind of speed and reliability, that's correct. If speed doesn't matter, an old Atari SH204 or SH205 will do.

a> Didn't anyone ever make a HD that plugged directly into an ST?

See above.

a> And how can I get a better floppy drive. 720K doesn't cut it.

You'll need to get a later TOS (version 2.06), an adapter card to plug it in because the ROMs are bigger, a new floppy controller chip (Ajax, or most 02-02 WD chips, but not all), add a buffer chip, and change the floppy controller's timing oscillator from 8 MHz to 16 MHz. It sounds complex, but it's fairly easy. It's also a LOT of work to go to when you can pick up a used Mega STe or TT that already does all that, runs far faster, and has many more bells and whistles besides.

h> If this guy wants to see wasted bandwidth he should go somewhere like
h> alt.conspiracy.jfk ...

It occurs to me that the ENTIRE Usenet is recreational in nature. Therefor,
in order to please our self-appointed Commissar of Wasted Bandwidth, I guess
we should simply close the Internet to private citizens and reserve it for
the pork barrellers...

Nope. It would be easier to get him a job as SinClap's assistant.

I agree that this is not the place to post such advertisements, but what makes it " .. base,immoral, perverted,"? and why are you the authority ? Funny but I have this outmoded notion that consenting adults have the right to do what they want. Has something to do with personal freedom.

4831. STIK problems...

Newsgroup: comp.sys.atari.st
Date: 1996-06-19 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <835310222_OASIS_@pcc-uky.campus.mci.net>
Source record: 143194

Okay, I've gotten STIK to connect @ 57600 to my ISP with my Falcon...But (always a -but- in there somewhere, eh?) <G> I can't get it to read the IP address correctly...my script goes something like this...

```
FIND = ogin:
RESP = thechyld.pcc.uky
WAIT = 05

FIND = word:
RESP = <password>
WAIT = 5

FIND = tion: (my provider uses Option: instead of Protocal)
RESP = S (for SLIP)
WAIT = 01

FIND = g.... (the line reads "SL/IP session from <numbers> to <numbers>
RESP = $GET_IP beginning....")
```

At this point, STIK says its reading, time goes by and then it timeouts with a "timeout reading IP Address" error...I'm still online so I went ahead and tried CAB and IRC but both timed out...(since, I'm assuming, I wasn't really connected) Any ideas or suggestions? Thanks in advance... :)

>alot in the 1980's and with a higher prices but is the bare min. in 1996. Well
>system 6 still makes Tos look and feel generic.

Mr. Sinclair, I'm using a 4 meg Falcon 030 with TOS 4.04, an 810 meg HD,
and the DeskTopper upgrade...I started out with a 520 ST with TOS 1.0.

After reading your (obviously uninformed) statement above, I've come to
realize just how much hot air you are blowing...

Nobody, and I do mean -NOBODY- with half a brain could possible chart the
various TOS version from 1985 through 1996 and say that they have not ad-
vanced. You could fit galaxies into the chasm that is the difference from
the original TOS to TOS 4.04...I call it progress also... :)

You can scan in two extra disks... A and B, use the right hand most
menu on the little magic dialog config that pops up at the start of
the demo, the leesen option is what you want (German for read ???).
So you can try and use your worn programs, etc. however drive C is
limited to 8Meg, and this apart from A and B are the only drives you
can use (Nb. use B as another 1.4 Meg Harddisk, the files are stored
on harddisk anyway !).

I tried setting it to 60fps, but it didn't seem to make much
difference !

>
> p> If you have Magx english version... you can replace the version
> p> supplied with your own, in english.
>
>Ehrm... If I had the English version, why would I be running the German demo?

Because there is ONLY a German demo of MagicPC, and if you have and
English version of Magx (for ST, ie. with Magic 4) then you can use
this for your desktop, and therefore have menus in english.

BTW: as the creator of Gemuolator pointed out MagicPC does indeed
cheat like crazy with GemBench. Check the times that Gembench quotes,
and you'll see they are about 1/2 of the time it actually took to do
the test !

So don't trust GemBench, or anything that uses the 200Hz timer for
the tests !

ATb.

Hi:

Can someone tell me how to get the TOS image onto a disk using an program like WINX or something similar. I seem to be able to do it on my actual ST but not on my PC running gemulator. Unfortunately my ST only has TOS 1.4 so it does me no good with STonX.

Any suggestions would be greatly appreciated.

Thank's

Please post here or email to peterw@io.org

4840. Help w/SozobonX???

Newsgroup: comp.sys.atari.st
Date: 1996-06-19 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <4q7qlt$lcl@madeline.INS.CWRU.Edu>
Source record: 143282

I must be doing something stupid again, but I can't get sozobonX to
do anything.
I downloaded sozbin15.zoo, sozlib15.zoo and sozutil09.zoo from
Funet. (ftp.fu-berlin.de came down garbled with fatal decode table
errors) I unzoo'd them, moved them into a file called sozobon,
(actually i used the old directory structure made by HSC) Changed the
environment variables like the readme file said, and when I try to
compile ANYthing, be it the examples in the examples folder, the old
HSC examples, or another set of files that compiled,or tried to, under
HSC, nothing happens. The wheels whir, and a line shows up that says
all components are up to date, or some such.
Can someone help, and tell me what on earth I am doing wrong???

Source record: 143285

Rich Tietjens,

I made a mistake in my last post. The 2.4 giga bytes should have
been 4.8 giga bytes.

bhauer@address.net (Brian Hauer) says:

>Rich

>I agree with you completely. I am paying for access as well but I'm
>certain that a few measly bites of software description lines are the
>least of the internet's worries. Even with my pathetic by today's
>standards 14.4kbaud connection into the internet, those lines your
>software is adding take a whole of about 0.1 seconds more per message.

OK, were back on time, again.

How many messages are posted to newsgroups daily? Let's use a very
conservative figure, say 10,000. So 10,000, times, .1 second = 1000 seconds
for posting them.

How many messages are read from newsgroups daily? Again, a conservative
estimate 1,000,000. That's 1,000,000, times, .1 second = 100,000 seconds.

Let's see, 60 seconds per minute. 60 minutes per hour. 60 x 60 = 3600
seconds per hour.

So, if everyone adds .1 second of advertisements to each message, almost a
third of an hour is wasted, daily, uploading it.

And 27.9 hours are wasted, daily, downloading garbage that adds nothing
worthwhile to the message that was posted.

If that's not wasted bandwith, I don't know what is.

Bill

Not forgetting the extra bandwidth this whole thread and all the replies will generate - all of which will probably contain the same SIGs and none of which will reduce the number of SIGs in use, I think I can afford those few photons on the net.

If this guy wants to see wasted bandwidth he should go somewhere like alt.conspiracy.jfk ...

t> :)

s > At today's prices, quoted by several of the on-line SIMM
s > suppliers, it would be between $320 and $1000 (prices vary
s > wildly). At last year's prices, it probably cost closer to
s > $600.

prices have been dropping incredibly, as a matter of fact. And
now is a good time to do that memory upgrade.

That's what I did this month with my Falcon (due in part to
wanting to speed up Calamus SL - ever try to do a colour document
with only four megabytes and virtual HD memory installed? Slow. And
not fun). Going thru my brother (who's service manager for an
Apple/PC dealer at York University), I was able to get ahold of four
4mB, 30 pin, 70ns, 3-chip SIMMs for $75 CDN each & GST/PST ($345 CDN
total; $1 CDN= .72 US). Even nicer, Systems For Tomorrow in the US
is currently selling chro_Magic's RAM Gizmo SIMM upgrade board for
the Falcon for $49.95US unpopulated (that's 50% suggested retail).
So I was able to upgrade for much less than I would have about 6
months ago. The RAM has been a great blessing so far.....

For ST owners, it's even better - I've seen 1 mB SIMMs going for
around $20-25 CDN. Wonderful for STe/MegaSTE owners; of course, ST
users will need to get the XTra RAM Deluxe board before going up to
that level, but it still works out for less.

I downloaded them last november and it was OK.
Check if you tried to download them in BINARY MODE or in ASCII MODE.
It is easy to see if it is an ftp program, a little less if it is a
program like Netscape.

Have a nice day.

In former versions even if you set correctly the environment
variables, it didn't work correctly. The best way was to put all the
folders (bin, include, libs) in a folder called <usr> and it worked
better.

>(actually i used the old directory structure made by HSC) Changed the
>environment variables like the readme file said, and when I try to
>compile ANYthing, be it the examples in the examples folder, the old
>HSC examples, or another set of files that compiled,or tried to, under

I think you are using a makefile.
This program check if the archive bit of a file is set or not.
If the .o file exists and the .c or .h file had not been modified, it
is normal that the compiler don't do anything.

>Can someone help, and tell me what on earth I am doing wrong???
Check this, and repost an article if it still does not work.

Have a nice day.

To get OUTSIDE running with MiNT you have to install it according to the
instructions in the OUTSIDE README file. You can't use memory protection
when running MiNT together with OUTSIDE. And you should use OUTSIDE 3.30
or newer especially if you're running the MinixFS.

4853. 2nd HD problems (ICD Link)

Newsgroup: comp.sys.atari.st
Date: 1996-06-19 00:00:00 UTC
From: andy@allatsea.demon.co.uk
Message-ID: <699_andy@allatsea.demon.co.uk>
Source record: 143295

Hiya ....

Your last game of Scrabble mailed this to All.......
y> I'm trying to connect a second harddrive to my Atari MegaST system
y> (TOS 2.06) They are both Quantum drives. I'm using ICD Link
y> (V6.0.6).
y> I can use each drive seperately:
y>
y> Atari->ICD Link cable ->Drive ->terminator
y>
y> No problem. However when I connect the 2nd drive then strange things
y> happen. The setup becomes:
y>
y> Atari->ICD Link cable ->Drive1->SCSI cable->Drive2->terminator
y>
that looks about right?.........::-))

y> The above setup results in partition information being trashed on one
y> of the drives.
y>
something wrong somewhere then?......::-(

y> Am I missing something obvious that I should or shouldn't be doing ?
y>
you must be, but all i can think of is the SCSI id?.... each unit connected
to the SCSI bus *HAS* to have unique ID No?... I.E. drive one could be SCSI
ID 0, and drive two would be SCSI ID 1....... (there should be facilities on
the drive to change it's ID).............

whatever HD driver software you use (ICD or HD Driver) should show what HD's
it finds on the "chain"?...... does it show the two drives at boot up?......

the only other thing you mention, is that you've set them up individually....
each of them to auto boot, i've no experience here, but this may be a cause
of some confusion?...... personally all i've ever done when adding a drive is
connect it into the chain, making sure that the termination is right (as you
appear to have done) and then fire up the system from the origonal
drive?............

maybe you could start again, by connecting drive 2 only, reformatting,
connect drive 1 & 2, (ensuring different ID No's) boot from drive 1, it
should then "see" both drives and you'd be able to partition drive 2 from
there?............

sorry if i can't give you a definative answer here, but hope this
helps.....:-))

Bye for now.....

Source record: 143297
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I hate it when I've been barking up the wrong tree. :-(
The problem was solved when I replaced the brand new SCSI
cable (not the ICD Link cable) that connected the two drives
together.And this was a brand new cable that.

What is strange is that even with the bad cable the software
could still scan the devices and come back with the drive name
and the SCSI ID it was set to.

Thanks to all who replied with suggestions.
Zayed

Are you saying that your Mega has an internal hard drive? (A not
so common configuration, that's why I'm asking.)

Hard disk partitions usually begin with drive C:, so even if you get
your internal hard disk to boot, drives A: and B: will be floppy
drives.

To make a hard disk "bootable", start up the installation program
for your hard disk driver (whatever you might be using) and install
the driver from there.

4858. Workstation monitor -> Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-06-19 00:00:00 UTC
From: Simon Yardley <c4sy@dmu.ac.uk>
Message-ID: <31C7F417.1691@dmu.ac.uk>
Source record: 143300

Hi,

A friend has a 17" colour workstation monitor, which has separate RGB
ports and SYNC IN and SYNC OUT.
He has bought a cable to mix the three RGB signals and give a single VGA
stlyed port, so it will work on a PC.

Would this work on a Falcon ?

I think the lowest refresh rate is 75 Hz and it goes up to 120 Hz ... ?

When a Falcon is switched on will it automatically sync to 60 Hz as for
a VGA monitor ?
Or would something like SCreenBlaster2 help me out.

Any replies would be gratefully received !

-Simon

Hot Damn !! I wish I had something to run it on !!

Mind you, I never really understood programming until I learned
Algol 68 !! That was a long time ago on an IBM 370 with VM/CMS,
using the FLACC-compiler. Does this ring a bell?
By the way, I do not agree with people who think they found
something BETTER than Algol 68, whatever they use sure may be
DIFFERENT than Algol 68 and more suited for their purposes. But
for really learning the trade, or art :-), I'd go for Algol 68
any time.

Damn, I just wish I had something to run it on.....
Maybe we could offer some help to professor Lindsey, one way
or another...

Bye, Paul. (And I ain't old :-)

4862. SLM804 parts...

I am (hopefully) getting an Atari SLM804 Lazer Printer for my Atari STe system. Where does one get extra toner and the other stuff that lazer printer requires? I have drivers for the software I want to run with it (Publisher 2 ST and Word Writer) so that is no problem, it is just the hardware stuff. Also, how many pages per minute does it do with a 4 meg machine?

Of course, you're right. If only one person added un-necessary garbage to
his messages, it would not be anything. But you know how things are,
monkey see monkey do. Pretty soon everyone is doing it, because everyone
else is.

>All of these calculations as such are almost ridiculous because
>they're inherently imprecise.

Right, again. But the example was intended to show how a small thing,
becomes a large thing, if everyone does it.

>You have to admit that these paltry taglines are just peckings on the
>surface of bandwidth compared to the new and ingenious ways people
>have discovered to devour bandwidth.

Go back and read my original message. My complaint was with the 'tag lines',
with only a comment about long sigs. I am not against sigs, although I think
some people carry them to extremes.

Bill

Right - well it looks very much to me like you're grabbing at nothing.

It's my guess that the numbers after "to" is your IP. :)

Try this:
FIND = ogin:
RESP = thechyld.pcc.uky
FIND = word:
RESP = <password>
FIND = tion:
RESP = S
FIND = to
RESP = $GET_IP beginning....")

Greets,

>Yea, but the Atari OS hasn't really advanced since 1985.. I could argue that

Actually, OS'es in general haven't advanced in 20 years. Desktop OS'es are
just finally implementing what have been standards on larger systems for
decades.

re TOS: There's more than just TOS out there. Once again you show your
ignorance. (minix,mint,OS/9,multitos,geneva,magic & linux to name the
most obvious ones)...

>System 6 which is memory lean but lacking many functionality that we Mac users
>take for granted in in 1996 with System 7. I call it progress. 16 megs was

So, what does System7 have that you absolutely need and System6 does
not have.

>alot in the 1980's and with a higher prices but is the bare min. in 1996. Well

Until there is another 'resin fire', we can count ourselves lucky. However,
until very recently that precious 16Megs would set you back as much as
2 STe's. Nevermind all the other aspects of 'life' you could apply such funds
to.

>system 6 still makes Tos look and feel generic.

So. A computer is a tool. Tools should get some work done for you or make
something easier. Look and feel although good for marketing hype doesn't
significantly impact upon utility.

[jedi deleted this]
>
>
>In the U.S. 72 pin 16 megs will cost around $160.. So memory is a non issue.

This has only been the case for the past 3 months. Historically the memory market has been volatile. Also unlike most electronic components, RAM has actually managed to significantly INCREASE in price at times.

All we need is another resin fire...

Furthermore, the price quoted is, most generally speaking, a mailorder rate and is a bit outdated as well.

Despite this apparent progress, there are some tasks more efficiently run
inside of an emulator. Despite the emulator overhead, the fact that GEM
only uses what the so called progressive systems WASTE, makes it a viable
option to native software.

Oddly enough, the obnoxiousness of both you and Darek seem to cancel
each other out...

If the flyback were out, the picture would more probably be small or dim,
if the monitor worked at all which is unlikely.

I strongly suspect the timing cap in the vertical oscillator circuit as
having gone off-value, or the vertical retrace cap. Only problem is, I'm
not familiar with the layout of the SM-124 chasis, so I can't
intelligently, tell him where to look.

Later,
Gizmo

Thanks muchly, received safe and sound (looking at the file). Will
give it a try out straight away!

The blocking of ALT+CONT+ESC botherd me not as I usually switch over
using AppLine.

Cheers again.

Julian:
I have never found a need for a converter. TOS can read PC formatted
disks. I either get pre-formatted disks (in PC format) or format them
on my PC with this command (DOS 5 and above): FORMAT /f:720 A:
I then use this disk on both my Atari and my IBM clone.

However here are two places you can get a bunch of utilities by
Anonymous FTP.

Site:
atari.archive.umich.edu
Directory:
/atari/Diskutils/

Mirror Site:
src.doc.ic.ac.uk
Directory:
/packages/atari/umich/Diskutils/

Files:
TLC_FORM.LZH
PCFORMAT.LZH
PS2FORM.ARC
TWISTER2.LZH
DCFMT320.LZH
DIAFORMT.LZH

I have been using a NEC Multisync II for a couple of years now no
problem. It is a little old and does not have a perfect display.
For the Falcon it is good because it will cope with 50Hz signals.

Rich.

>so I went ahead and tried CAB and IRC but both timed out...(since, I'm
>assuming, I wasn't really connected) Any ideas or suggestions? Thanks
>in advance... :)

The above is looking for

SL/IP session from <numbers> to <numbers> beginning.... <IP address>

where <IP address> is any dotted decimal such as 123.456.789.123 so if
you are certain this is the case try extending the "g...." a little to
"eginning....".

Out of curiosity, what does <numbers> represent? My feeling is that
one of these is actually <IP address> so "g...." ought to be "from" or
"to" ("to" most likely). ie it sounds like you are being told ...

"SL/IP session from <Host ip address> to <your IP address>
beginning..."

where "beginning...." really means "this is the end of text
communications, TCP (STIK) stuff needed from this point".

No, but I wouldn't post one anywhere :) Trying to make all the internet
suitable for kids is what the US government tried to do, and
fortunately didn't manage. There's no way you can prevent kids from
accessing wherever they want on the internet.

I agree that posting it here was totally inappropriate and wrong, but
posting it in say alt.sex would not be inappropriate, yet kids can
read that.

Look for a cap with a puddle of black goo around the PC board end. That's
the usual symptoms of caps going bad in an Atari monitor.

You know, everyone is speaking about the "right" to post anything up on
the Internet. But with that right comes responiblity. You must remeber
that not everyone wants to see this stuff and some should even see this
like children. I do wish people who advertise this sort of thing will
stick to speciality newsgroups instead of broadbasing it everywhere, it's
like that in the real world BTW.

And those who feel that 'they' shouldn't have to be protected because the
children must be, do you let your Playboys out where your kids can read
them? Thought so...

Eric Noss

Probably dozens. Try ftp.cnam.fr or ftp.src.doc.ic.ac.uk or even Hensa.

b> If only one person added un-necessary garbage to his messages, it would
b> not be anything.

Here's the crux of the matter: You are calling my product identification "unnecessary garbage." Let's assume for a moment that you are a singer/songwriter. Would you be offended if I told you that putting your name on the album cover was adding "unnecessary garbage" to the package?

I wrote the program that adds the "UUCP-ST" information to the messages. You object to them, even though the total size was smaller than the Netiquette-permitted .sig size. I find that insulting and small-minded. Is it any wonder that I find it hard to avoid "name-calling" in this discussion?

: This flickering effect is the nature of Interlacing. The Falcon's only
: major shortcoming, in my opinion, is the low video bandwidth requiring 80
: column high color modes to be interlaced and therefore, very hard to look
: at. Interlaced modes are only really usable for slideshows and such,
: because pictures aren't as noticably high contrast as the desktop.

I was always under the impression that 640x400 was interlaced on the
Falcon because the SC1224 monitor had no other way of doing that high a
resolution. Am I mistaken? If so, are the high-res color modes
interlaced when using a VGA monitor with the Falcon?

Why the f*ck does this chap keep posting this damn list here ???

Sure it contains a list of about 10 ST games !!!!!!! WOW ! If you insist on putting the list here, please only post the relevant (ST) section.... I'm fed up of keep downloading a huge great f*cking list, when there are only 10 or so games on it that are relevant to me. If I wanted to know about other platforms, then I'd go to the relevant newsgroup !!!

If people really want to cut down on the amount of data in usenet news, then cutting junk like this would be more effective than winging about people taglines/signiture files !

There's a game much like this for my Little Psion Series 3, called
something like Psion Man.... You adopt a little chapy, and his dog and
they live in your computer. You can type a few things to him, like
feed the dog and stuff. Other than that its pretty much like a screen
saver, watch him walk around, and do things like play on his computer
etc. etc.

However I wouldn't have liked to actually 'pay' for this ! (thankfully
its PD !).

1)Use the shareware program... GemView to convert direct from GIF to
Degas, and from just about any picture format to any other.

2)Use Degas to view Tiny pics

3)Also try Photochrome 4 to view GIF, TGA etc, in 4096 colours on an
STFM, and 19200 on an STe.... a really cool program by Doug Little,
author of Apex on the Falcon.

Did no-one tell you that it isn't voltage that is so bad, but current
???

I toyed around with an electric fence circuit once, and tried it on
myself, at about 100,000V it gave me a shock, but nothing to write home
about.

Now that came from 240V, 3A mains, so it was probably only about
0.007A, not much !!!

However I agree... openeing any electrical device, while the power is
still on and connected is risky !

Nice idea but..... !

Tried and nearly got kicked off because the period your BBS waits for
a response is only just long enough for telnet use.

Problem is the internet is REALLY slow in this case, and the lag was
unbelievable (It'd be faster to snail mail me the screen shots !).

Anyway might try and look round someday... but for now I think I'll
give it a miss !

ATb.

From: ekr@efn.org
Message-ID: <4qd5vp$q4u@garcia.efn.org>
Source record: 143097

Hey you all,

I do realize, that all of you, Beta testing folks, are quit busy, but, is Cab really presently being configured for a PPP connection? I am moving to a IPS, that only offers PPP. If this is true....Cool.....I am presently using a slip connection, thanks to my Atari guru.

Michael Parrott (mparrott@kendaco.telebyte.com) wrote:

: A recent shipment from Toad Computers had a flyer which indicated that
: the Panther VGA video card could be installed in a TT030 computer.

This caught my eye as well. A phone call to Toad's 1-800 number
confirmed that it would work with the TT, but email to dave@toad.net
informed me that this card will not work with the TT. Apparently the
video output is specific to the ST and STE's output. So if you want to
get more colours and get rid of the horrible white band around the usable
portion of your display, it looks like it is still the Nova card from
Homa. Apparently their prices are coming down, and someone out there has
undoubtably found their home page. Could you post the URL please?

Thanks.

Yes! I looked hard at Algol 68 when designing my new language, gUd.
Algol 68's strong typing (damaged in Pascal) and such were excellent,
but the language fell down (ironically) in its syntax. As you say, we
don't need one-pass LL(1) languages any more, but a four-pass,
context-sensitive language, though compilable, is hard for humans
to understand. The truth is somewhere in the middle: give the
compiler problems, if you like, so long as it simplifies the
language for humans.

Outside profits from Hddriver because Hddriver is XHDI compatible. But
Outside doesn't use (doesn't need) any Hddriver specific features. The ICD
driver does not support XHDI and that's why features like locking the swap
medium if it is on a removable drive won't work with this driver.

> hard disk partitions for Spectre GCR to use?

No, because using other partitions than TOS-compatible ones doesn't depend
on the driver but on GEMDOS. GEMDOS isn't able to access other partition
types than GEM and BGM and hard disk drivers can't do anything about this.

Seems as if the row transformer is broken (Is that the proper english
term ? I'm referring to the transformer that produces the high voltage
for the picture tube. It's a rather bulky thing with lots of pins
in a circular order, and a cable going out from the top to the CRT).
This is a nonstandard part, and I doubt that you can get it from stock
anywhere. It's probably a good idea to ask others for broken SM 124, to
get the transformer out.

Cheers Peter

CAUC (Coventry Atari User Club)

At long last, a time and date has been decided for the first meeting
of the Coventry Atari User Club. So if you are looking for a local
club supporting your machine, why not drop in?.

When: Saturday 20th July 1996.

Where: The Old Clarence pub.
(on the corner of Hearsall Common, on Earlsdon Ave North, opposite
the entrance to Broomfield Rd)

12 o'clock mid-day onwards.

As you will no doubt have guessed, this first meeting will be more
of an informal get-together than a meeting. It's hoped than plenty
of you will come along and show your support.

For more information, netmail or Email me...

-!- Not Mr Happy cos I ain't figured it out yet...

> and that's it. It counts down then does a time out count... But the

If it says "Connected" during timing out, then you're connected. If not, then you've got a problem with your dial script. Go over the last part of dial.scr (The FIND/WAIT/RESP stuff).
If you're connected, then it's a different thing again whether you can use that connection. Just give it a try, with CAB. If it doesn't work : Does it do anything ? If not, check with your provider if his SLIP needs header compression (van Jacobson compression). If it does, forget it (STiK isn't capable of it yet). If your provider assures you of plain, uncompressed SLIP, than CAB should say something like "Connecting", then "Resolving". If it hangs now then probably your nameserver entry in DEFAULT.CFG is wrong. It needs to be a four number (!!!) address of a machine that is capable of the job of a nameserver (preferably a provider recommended one). If it goes beyond that ("Read Data"), you have to wait for a couple of seconds. If no data comes in even in minutes then you have another problem, maybe with your provider needing a default gateway entry, something STiK doesn't do properly yet.

However, if CAB just loads nothing you should also try to increase the ALLOCMEM number in DEFAULT.CFG, just in case CAB.OVL ran out of internal memory.

Cheers Peter

> with a "timeout reading IP Address" error...I'm still online so I went
> ahead and tried CAB and IRC but both timed out...(since, I'm assuming, I
> wasn't really connected) Any ideas or suggestions? Thanks in advance... :)

This is *wrong*. First, put in a WAIT statement, as the specs require
that each FIND/RESP is accompanied by a WAIT. But this is minor, as STiK
is sort of flexible here.
The important part is that STiK reads until the dots, so it already read
the IP-address, but didn't take note of it. Then it waits for the
address, but the provider is probably not going to send it another time.

Change your last part to something like this :

```
FIND = to
RESP = $GET_IP
WAIT = 0
```

Now it'll wait until the "to" between the numbers, and read the second
number then (I guess the second number is your address. If not, try a
"FIND = from").

Cheers Peter

Glen Kelly (gkelly@gkelly.sat.net) wrote:
: I am in the process of setting up an Internet Service Provider here and may be
: able to shed some light on your problem. I would be willing to bet that the
: nameserver at uni uses the NIS resolving protocol instead of DNS protocol. As
: far as I know, nothing on the Atari will support it. I am not even sure of
: anything on any other platofrm other than UNIX supports it. -glen-

NIS isn't (really) a name resolving protocol. It was designed by Sun to
allow machines to share information about userids/hostnames/etc. For some
strange reason, Sun decided not to have DNS host resolution built in to
SunOS, but added it onto the side of the NIS hosts map. I don't believe
there is an Atari port. It might be possible to take the NetBSD (say)
implementation an port it to MintOS/MintNet, but I do see much use for it.

DNS is a distributed system, and each site /must/ have a DNS server if they
expect other sites to connect to them by name (The server doesn't have to be
on their site).

I suppose that it is possible that the nameserver you have isn't a DNS server
but is an NIS server instead. To check that the server is running 'named'
(the DNS server process), you could try a telnet to port 53 on the server.
Named listens on UDP and TCP ports 53. If the machine is running named, you
should be able to connect [1], if not, you will get connection refused [2].

BTW, I used nslookup [3] to check the nameservers for uni-trier.de. They
are :

dns.uni-trier.de 136.199.8.101
dns2.uni-trier.de 136.199.8.129
rzsun02.uni-trier.de 136.199.8.224
xlink1.xlink.net 193.141.40.1
ns.nic.de 193.196.32.1

These are guaranteed to be running a DNS service [4]. You could try one of
them instead. There could also be other servers running for internal use,
that aren't advertised globally (so I can't tell from here).

J

[1] You can connect, but you won't be able to do anything useful - this just
checks that there is something there.
[2] It is possible that you won't get 'connection refused' if named isn't
running but something else is using TCP port 53. This is very unlikely,

as DNS is a 'well known service' and nothing else should use one of its
ports - see RFC1700.
[3] A useful DNS debug tool. It can test the functionality of a DNS setup.
See also 'dig'. Both come with the 'bind' distribution.
[4] When they are up, anyway. As I said earlier, if they weren't uni-trier
would lose its Internet name resolving capability.

> Thanks in advance

No problem, Mike.

First, install HSmodem 6 with both MFP.PRG and SCC.PRG. You also need
the Modem.CPX and the little specila calbe so that CD and RI are copied
from the Modem1 port to the Modem2 port. Connect to Modem2.

Look in your Freeze Dried folder - you should find a file named
FZDSTERM.CFG or somthing like that. The very first line is what we are
interested in. Note the info in that line; run Freeze Dried and change
the baud rate to 19200 and save the config (if it's already 19200, change
it to 2400). Now look at the config file again. One of the numbers in
that first line has change (if you set it for 19200, the number should
now be a 6). Edit the file with any plaintext editor and change that
number to a 0.

Now set up your MFP.PRG using SETTER.TTP and remap the higher speeds to
110, 134, and 150 bps (the entries will go 110/38400, 134/57600, and
150/115200). Reboot so that DRVIN installs MFP and then SCC.

Modem.CPX should be set for a speed of 150 baud on Modem2. When you run
Freeze Dried, it should show a B:0 on the status line. Go ahead and dial
and you should get the higher speed connections (I got 21600 to a local
noisy line last night).

Since I'm posting this at work, if anything is unclear, email me back and
I'll check it out when I get home. Meanwhile, please copy it to the
newsgroup - I don't have posting access from here.
Thanks Rich

Personally I use a Dynalink 1428VQE modem and it works like a charm, but
what you need is a modem with V42.bis so you can get the extra speed that
it provides (I get 3200+ DL from my provider with an 38400 uppgraded ST).
I also use Freeze Dried Terminal v2.12 ,I know that some people will swear
by their own setup but this one works good for me.
Hope that it helped you some.

I can send it to you, if you want. My text file is titled RFC 1855, or
FYI 28, so you might as well try to look for an ftp site that provides
the "Request For Comments" pages.

Cheers Peter

At first you also need an upgrade of your Ataris modem port, as in it's original form it's only capable of 19200 Baud, with which you will not see any significant speed increase compared to a 14.4 kbaud modem. The upgrade consists of a hardware part (get RSVE* from the Net) and software driver (enhancer would be a better word, as it replaces the original driver, get HSMODA06.ZIP), both from Harun Scheutzow.

Any external modem should do. For a terminal program I recommend strongly CoNnect, although others should work as well.

Cheers Peter

If im right you need to grab the second lot of numbers and not whats
printed after beginning....

use the following for the FIND line

FIND = to
RESP = $GET_IP

Without seeing a full login its rather hard to say if this will work
but if there are no more "to" between you entering S for slip mode
then it should work.

Nick.

I have exactly the same problem as you have mentioned here! I
thought that I had completed the mission and so I hyperspaced to another
system. But there is always another station to destroy! One thing I
noticed is that when you destroy the station, it still seems to be there.
The thargoids actually appear from the station as if it was not destroyed
in the first place! I can only think that it is a bug in the game. I
have asked many people about mission 5 but this is the only time I have
heard of anyone else with the same problem! If there is anyone who knows
anything more about it we would be pleased to know! Thanks. Dan Jones.

b> I made a mistake in my last post. The 2.4 giga bytes should have
b> been 4.8 giga bytes.

That's roughly one hard drive (OK, 1.2 drives) in the servers I have at work. One hard drive on a netowrk that contains literally thousands, possbily tens or hundreds of thousands, of large hard drives. More space than that is wasted in "lost" files. It's definitely less than 0.001 percent of the available storage space.

b> And 27.9 hours are wasted, daily, downloading garbage that adds nothing
b> worthwhile to the message that was posted.
b>
b> If that's not wasted bandwith, I don't know what is.

This entire thread is. Your messages, plus my replies, plus all the other replies from everyone else who has bother to comment at all (all of whom disagree with you, so far) add up to one whale of a lot more than a few sig files alone would have.

I suggest you drop it. You have reached the point of being a whining annoyance, rather than the clueless newbie I thought you were at first.

Source record: 143136

Available for sale 1 falcon speed board with a set of original dos software (windows, dos 6.0, word perfect 5.0,). Version 6 of the falcon speed software.

Falcon speed allows you to run your falcon as a 16 MHz 286. It can be run as a program or a desk acc (if you have enough ram) It does 800x600 16 colors windows and runs most software that will accept the falcon speeds video modes (that is older ega and CGA games) and straight dos based software. It runs many windows programs (cannot run software that requires a 32 bit processor) Because of the presence of the falcon hardware it actually runs faster than an equivalent 286. (it seemed to be somewhere between a 286/16 and a 386/16).

I would like $200.00 including shipping to anywhere in the north american continent.
Contact me at 403-271-1481. Calgary. or by sebnding email to the address above.

Is it also available anywhere on the Internet via FTP ?
I've got an ICD Advantage+ adapter with software version 4.x or 5.x from
way back in 1992. Because I got no updates in Germany I use the SCSI tools
2.12 which were also shipped with my drive. As far as I remember the ICD
docs it should be possible to get software updates for everyone because
the driver checks for the ICD hardware. So if there is no FTP site (I
looked for it and did not find one) perhaps you (or someone else) could
send me a copy of your latest version ?

TIA, Christian

> h> (bought separately), so I think I've done my bit to support them. I'd
> h> have bought an internal HA for my MSTe if Tom Harker would've recommended
> h> one to me too.

So if I get this discussion right (I missed the beginning because my newsserver keeps atari postings only 6 days) the first ICD utilities (which I got with my HD with ICD Advantage+ adapter) were free because they checked for the ICD hardware (in fact I got an update to 4.x via their years ago closed BBS in Germany in 1992). And the latest ICD Pro utilities are not freely downloadable anymore ?
If updates to the latest version are still free to owners of ICD hardware, perhaps someone could tell me where I can get them via FTP (see also my posting on ICD link downloadable upgrade) or could someone mail them to me ? What are the advantages compared to HD-Driver, SCSI-Tools or CBHD (e.g. cache of ver. 4.x was faster as SCSI-Tools 3.0).
If they are not free anymore, how much would I have to pay (and where can I get them) ?

TIA, Christian

MONOCHROME MONITOR FIX
Randy Constan, Elfin Magic Co.
--

If you have an ATARI SM124 Mono monitor that has recently gone belly up, read on. In particular, this pertains to those of you who have tweaked the coils and trim pots in your monitor to get a full raster display, although it's quite possible that unmodified monitors have been affected as well. Also, if do have a modified monitor that's behaving fine, you still may want to consider the suggestions described in this article, as it could save you a surprise monitor failure that (you _KNOW_) will definitely happen at the worst possible time.

Finally, this text describes a problem particular to the monitor manufactured by "Gold Star Co", which has the Brightness, Contrast, and Off/On Volume controls recessed on the right side-panel. There may have been other manufacturers of SM-124's with completely different electronics, so if ANY of the physical component layout descriptions written here do not seem to jive, then all bets are off and the information given here may or may not have any practical value. In addition, the monitor 'fix' I'm going to describe should only be done by a trained electronic technician, or at the very least a knowledgable electronics hacker with good soldering AND de-soldering skills!

Disclaimer: You can easily get knocked squarely on your butt by the voltages present in your monitor. Weather or not it kills you probably

depends on just what you fall on, your present health, and where the resulting flying monitor lands.

In any case, your decision to implement the changes described herein is completely your own. I disclaim all responsibility for your health, safety, or any damage to equipment or property caused by fires, implosions or explosions, earthquakes, global flooding, or galactic imbalance resulting from your use of any information in this writing. I think that about covers it ;)

So... once upon a time, we all got our nifty HI-RES mono monitors, powered them up, and the very first thing we all said was, "Ah.. MAN!!... This monitor is screwed up". Perhaps stronger language was used, but the fact was that we all thought something had to be wrong. Alas though, the tiny picture on that screen was exactly what the ATARI mystics had intended! Of course, it wasn't long before many daring hackers boldly removed the monitor's covers, cast their warrantees aside, and discovered a way to expand the tiny picture to full size. The information spread quickly through the worldwide internets, spider-nets, and fish nets, and soon all mere mortals had full screen displays and could actually read that 6 X 6 font! And so, the all lived happily ever after. But then one day years later, a curse fell upon the land, and darkness fell upon the faces of many of these monitors.

Ok, enough with the story narrative. By now, you're beginning to get the picture (no pun intended). The modification to fill the screen does indeed place an additional stress on a portion of the monitors circuitry, which coupled with a design error quite common to many types of computer monitors, ultimately caused the failure. The good news is that I've now seen quite a few monitors with this identical failure which is 100% repairable, and should leave you with 'good as new' results. The bad news is that you do need some technical skills, but even if you don't, finding a techie friend to help will be abundantly easier having a possible procedure for repair.

Brief technical summary. Right near the coil you adjusted to spread the horizontal width of your display, there's a 2.2 uF capacitor. More specifically, it is a non-polarized electrolytic capacitor, which is actually 2 polarized capacitors wired 'back to back' in a single enclosure. As the screen is widened, the peak voltage level across this part increases, thereby causing more internal stress. This situation is further aggravated by the type of part as well. All capacitor types have certain advantages and disadvantages and when it comes to electrolytic types, the advantage is smaller size. It's disadvantage however is that at higher frequencies, it has high 'leakage' current and acts more like a resistor. The Horizontal frequency passing through this capacitor is in fact quite high, and the resistive qualities at these frequencies cause the capacitors to generate significant heat. Over time, that heat will cause the part to fail even in un-modified monitors, but the modification certainly speeds up the process.

If your monitor has fallen victim to this failure, in a way your lucky. There's a fair chance that the problem (as said earlier) would happen one way or another anyway, and at least now you have a possible fix. First, you need to disconnect the monitor and open it up. If you have the chassis I'm describing there will be two screws on the upper sides, visable from the back; two more screws on the bottom; and a single screw on the back above the power plug, which is a removable 'spade' type AC connector. After removing the screws, you can remove the back cover, but be sure to be careful of the speaker connections. The speaker is mounted to the inside of the cover, and connects to the monitor's main PC board via a small removable plug. It's a bit tough to get to, but trust me, it IS removable.

Once the cover is free, there are 2 fuses to check first. From now on, all references to right and left will assume you are behind the monitor, with the screen pointing away from you. There is a small PC board mounted vertically on the right side of the chassis which contains a 0.75 amp fuse. There's also a 2 amp fuse immediately to the right of the speaker plug you removed on the main board. Check both fuses with a DVM or other suitable instrument. Most likely, you'll find that it's the 2 amp on that is gone, but either one blown is possible. You can buy these tiny fuses at Radio Shack, and while your there, you can pick up a much more modern replacement for the capacitor we mentioned earlier. There's also a resistor that often cooks when this failure occurs, so you might as well get all this stuff at once. If the problem turns out to be something else, at least you'll be prepared for the eventuality. In any case, read on to do a 'walk through' before buying, to make absolutely sure your chassis physically matches the one we're discussing.

At your local Radio Shack, pick up the following items:

fuse (pkg of 4) 3/4 amp 270-1048
fuse (pkg of 4) 2.0 amp 270-1052
fuse (pkg of 4) 5.0 amp* 270-1056
capacitor buy 2! 1 uF, 200v metal 272-1055
resistor (pkg of 2) 680 ohm, 1/2 watt 271-021

* optional purchase, see text.

Since we have plenty of extra fuses now, start by just changing them, and setting up the monitor (still uncovered) with your ST. If the display comes up normally, leave everything powered up and wait a few hours. If all goes well, you can either make the fix were going to describe anyway to save future grief, or put the other parts away, along with this text, in case the problem returns.

Assuming the problem did not go away (no display and/or fuse blown again), there are two paths you can take from here. You _can_ just go ahead and change the suspected components without really knowing if they are at fault, since they'll probably need replacement eventually anyhow. The other possibility is that you don't want to to this until you're a bit more sure it's necessary. If that's the case, read the next few

paragraphs. Otherwise, just skip over to "Making the Repair".

If you do want to do some checking, here is a possible (but not foolproof) procedure to see if the suspected capacitor is indeed the culprit. If the 0.75 amp fuse on the vertical board was blown, temporarily replace it with a 2 amp. If the 2 amp fuse on the main board has blown, temporarily replace it with one of the 5 amp fuses. Set up the monitor, still open, near your ATARI, and connect the monitor cable to your machine. Boot the ATARI with the monitor still off. We want to keep our 'powered up' time with the larger (wrong) fuses to a minimum. Now, hook up the power cord and turn on the monitor, being ready to instantly kill power at the first sign of any unsafe condition such as smoke or electrical arcing.

With the higher current fuses installed, the display will probably still be out, but the green pilot light on the front panel _should_ light. If it doesn't, then either the new fuses have blown, or a problem exists somewhere else in the circuit. Of course, the pilot light could just be shot, but if the higher current fuses do actually blow, then forget about the remainder of this discussion and just try implementing the suggested repair. Also, if the screen display _does_ appear with the larger fuses, don't be to happy yet! Twice now I've seen the 'crippled' capacitor seem to work fine for awhile before the final breakdown. So weather the screen display comes up or not, proceed to the next step as long as the fuses are not blowing.

Locate Capacitor C714. It will be the round cylinder on the left side of the main board (from the back), in-between the coil you adjusted when you increased the width and the flyback transformer. The coil is the only adjustable coil on the board, so you can't miss it, and hopefully you know that the flyback transformer is the thing-y with the wire that goes into the top of the picture tube! Locate the capacitor... but don't touch it yet! The flyback puts out thousands of volts, and if there is a flaw in it's insulation, it could arc right into you hand. Just leave the unit powered up for a few minutes, and then turn it off. Now, with your finger, move close to, and finally touch the capacitor from the top. What you're looking for is a _HOT_ part, so be careful! If in fact the part is really hot, it probably has shorted and needs to be replaced.

Also, immediately to the right of the coil, also on the main board is a diode (D-709) and a resistor (R-221). Take a good look at the resistor to see if it looks stressed or burnt. If you want, you can do an in-circuit check with a DVM to see if it has opened. You can make this measurement from the bottom of the board if you want since it's pretty cramped on top. Even if it has not died, you should consider replacement if it appears stressed, or the underside of the board appears burned and discolored at the location of the resistor.

Making the Repair

Making the repair is simply a matter of changing the parts, BUT... there's some special considerations here. You may or may not be aware that radio shack does have 2.2uF, 50 volt non-polarized electrolytic capacitor in stock! But using that part would be dumb since the conditions that caused it to die in the first place have not changed AND, the part was a poor design choice to begin with! We're going to use the two 1.0 uF metalized film capacitors which are NOT electrolytic, AND have a working voltage 4 times that of the original part! We will have to parallel both capacitors to get 2.0uF, which is reasonably close to 2.2 and in fact works just fine. First though, you'll have to de-solder the existing C-714, which will probably be a bit of a chore. Do that, and also get rid of the existing R-221 if it shows the signs of heat stress (or is open) as we discussed earlier. You can just cut it out if you want, since we'll be soldering the new parts to the underside of the board.

Now, take the two 1.0uF capacitors, and solder them together in a neat parallel arrangement, that has a pair of leads bent to accommodate the spacing of the leads on the original capacitor. Look at the underside of the board and observe the original C-714 solder pads, as well as the clearance to the bottom when the cover is replaced. Give it a little thought and come up with a mechanically sound and visually sensible combination. The capacitors again, are not polarized so direction does not matter. And remember... parallel, NOT series!!! Solder the parallel combination to the C-714 pads under the board. Try to push the leads right into the holes left by the removal of the old capacitor.

R-221 should also be replaced from the bottom side of the board unless you're really patient, and have some small tools. It's much easier to just trim the leads and tack solder it in place under the board. If the board looks a bit burned in this area, you may want to clean it up a bit prior to installing the new resistor.

Finally, don't forget to put the proper fuse values back into BOTH locations. The original fuse values are important protection and do not normally blow unless there is a real problem. I definitely do not recommend leaving the larger fuses values in place. Do a bench check on the ST again, still with the cover off. You may need to re-adjust the horizontal width, or the position tabs on the neck of the picture tube to center and set up the display. Once this is done, you can put the cover back on, and you're back in business. If the fix does NOT help, just double check your soldering and connections to make sure you didn't wire something wrong.

Hope this fix was helpful. If so, I'd like you to drop me an EMAIL, since I'm curious as to just how many fried monitors out there had this problem. Also, if you're not able to make the repairs yourself and live anywhere in Islip, Long Island, NY area, send me E.Mail and maybe I can help you out. My GE mail address is R.CONSTAN, or Internet: rconstan@maestro.com.

Okay, so we're back to confusing individual bandwidth with global
bandwidth. To an individual, your figure of 27.9 hours is
astronomical. Can you imagine 27.9 hours to download a single line of
text?

But from a global standpoint, 27.9 hours of individual bandwidth is
-nothing-. Every computer on the internet at all times is
contributing its own seconds, minutes, hours, of bandwidth. So say we
have 1,000,000 servers on the internet, each for 23 hours a day (a
gross under-estimate).

That's 23,000,000 hours of individual bandwidth a day. And most
servers aren't on 14.4k lines. So we'll be generous and give all
servers a 28.8k connection (again, a low estimate).

23,000,000 hours multiplied by ~2800 bytes per second is:

23,000,000 x 2800 x 60 x 60 = 231,840,000,000,000 bytes of potential
bandwidth.

All of these calculations as such are almost ridiculous because
they're inherently imprecise. I'm just showing how easy it is to make
even more humongous numbers point the other direction. However, just
common sense will tell someone that the cumulative bandwidth use of a
small tagline is terribly globally inconsequential on the internet.

>If that's not wasted bandwith, I don't know what is.

I'd say wasted bandwidth is probably more along the lines of all those
geeks trying to hit on "internet babes" on internet-phone chatlines.
You have to admit that these paltry taglines are just peckings on the
surface of bandwidth compared to the new and ingenious ways people
have discovered to devour bandwidth. Our conversations here on this
group are so insignificant that most news server operators probably
don't give the comp.sys.atari.* groups a second thought. They're
thinking "40 messages a day? Bring 'em on!"

4945. Re: ALGOL 68S Available

Newsgroup: comp.sys.atari.st
Date: 1996-06-20 00:00:00 UTC
From: clodius@hotspec.lanl.gov
Message-ID: <g13f3qsfoq.fsf@hotspec.lanl.gov>
Source record: 143144
Cross-posted to: comp.lang.misc,comp.sys.sun.misc,comp.sys.atari.st,comp.sys.acorn.misc,uk.comp.misc

I thought that:

1. The full Algol 68 standard could be implemented as a
two pass compiler, and a subset could be created that was one pass.

2. That LL(1) is a property of a given grammar of a language, and not
the language per se, i.e., that it is possible in principle to rewrite
any LL(k) (or LR(k) for that matter), into LL(1) form, provided k is
finite. This is not commonly done for complicated languages,
however, as the LL(k) form is usually significantly more compact than
the LL(1) form.

3. That Pascal's published grammar is not LL(1), although some of its
descendents have LL(1) grammars.

4. That most widely used imperative languages, e.g., C, C++, Cobol,
Fortran, have published grammars that are not even LALR(1), and some of
them e.g. C++, Cobol, and Fortran have context sensitive aspects
in their grammars that sometimes require two passes over selected
statements for resolution.

Great attitude! Everyone else is doing it, so I will too.

>Also, your technical information is incorrect. Each character requires only
>one byte of storage

You're right, I don't know why I said it takes two(brain fade?). So that
makes the 2.4 giga bytes correct, in my message about wasted storage.

>Most people on the 'net use sigs. You aren't going to
>change that, but harping on it is going to SERIOUSLY piss off a lot of us.

First, I never said anything about eliminating sigs, what I said about sigs,
in my original message, was:

'PS__ I am posting this on comp.sys.atari.st, hoping that some of the
others with long signatures will take a hint.'

The key word is 'long'.

What I do object to is the advertisements:

```
>
> --- JetMail 0.99beta21
> * Origin: STarship & Quark's Holosuites 503-244-2870 (51:205/311)

```

I find this kind of thing a total waste, and very irritating to read
over and over. All I asked was for you to limit these to once or twice
a day. It was on a day that you had posted an unusually large number(for you)
of messages.

I really don't mind if I do, "SERIOUSLY piss off a lot of us.".

While I would like to see a lot of things like quoting, cross posting, and
the like cleaned up, I know that is impossible. I wasn't trying to start

a crusade to eliminate sigs.

>I would also like to point out that my sig (now attached instead of product

Rich Tietjens,

Well it looks like my last message was bitten by a glitch while uploading.

The rest of the message after:

Another mention of sigs, by me, was in the quote on 'Netiquette' from
"Zen and the Art of the Internet".

Should have read:

Which, by the way, says, no more than four lines.

But I wouldn't quibble over an extra line. Also I think your sig is more
pleasing to read than the 'product IDs'. Add to that the fact that your
sig appears only on your messages, and not on all of the mail that comes
through a particular gateway. Everyone knows there is plenty of garbage
in the headers attached to the messages, without adding more to the end
of them(my reason for calling them tag lines, they tag along at the end).

Thanks,
Bill

For sale:

System Solutions MiniS hard drive system (170 meg Quantum drive fitted)
No bad sectors.
Formatted and ready to run
Loaded full of ST software
ï¿½75.00 includes post (UK)

ICD "the Link" with software
ï¿½40.00 includes post (UK)

Both together..ï¿½100.00 including post (UK)

I have for sale approximately 100 coverdisks from ST Format/Review/User
that I have no need for any longer
All different.
ï¿½32.00 including postage or will sell for ï¿½0.40 each for specific ones.

Extendos CD rom driver Disk - ï¿½8.00 inc. post

Also 2 Atari ST CD roms in excellent order:
Atari Mega Archive CD - Volume 1
Gemini Atari (Walnut Creek)

ï¿½12.00 each includes post.

Please email.

I've made a deal for a Falcon030, I'll be getting it via the mail
real soon. Now I need to know a few things, I've got sc124 & sc1224
monitors, what do I need to use them on the Falcon? Also what other
monitors can I use? How costly are they?
Do I need a ICD Host for my scsi 44meg syquest to work with the Falcon?

I've been using ST's, now I'll be flying on the wings of a Falcon!

: this normal? Are there any fixes? Is there something I can or should
: adjust to make the flickering more tolerable?

This flickering effect is the nature of Interlacing. The Falcon's only major shortcoming, in my opinion, is the low video bandwidth requiring 80 column high color modes to be interlaced and therefore, very hard to look at. Interlaced modes are only really usable for slideshows and such, because pictures aren't as noticably high contrast as the desktop.

From: samsung@nevada.edu
Message-ID: <4qda22$b87@news.nevada.edu>
Source record: 142955

Hello Everyone,

I have some questions about my STf that I am hoping that someone could answer for me.

First off;
I need a Compiler for the C language and any help I can obtain it pushing me off in the right direction to start programming in C. I have one Compiler that I got off the net, that is written in German.. but according to what I understand off of the translater, it only works in TOS 1.4 and I currently have TOS 1.0 What is a TOS anyways?

Is there a way to upgrade my TOS 1.0 to TOS 1.4, and is it worth the trouble?

I need to install a battery in my computer so that it keeps the time and date after I shut it off, anyone know how I can get this done cheaply?

What are some good places I can get software for my computer at really low rates?

Any support groups on the net for my computer? How about Bulletin Board Systems to help support Atari?

Is upgrading the memory on this computer worth it, if so, what do you suggest? (I currently have 1meg)

Was my $75 investment in this computer, plus another $75 for the monitor a waste of my time and money, or do you think I can get off to a good start with this computer?

I appreciate any help anyone can give me. For your information, I am currently working of a 2400baud external modem, (14.4 ordered in the mail, should get it soon) with Freeze Dried Terminal as a program. Though, I am having problems it seems in obtaining the key for it... has anyone else had problems in sending for it, to have his/her request disappear?

Thanks Again

Source record: 142959

Okay, thanks to everyone who posted suggestions to my problem with STIK. It was as simple as reading everything from the " to " on... Now, I've got some more questions! <grin>

1) When using CAB, whenever I try to go anywhere, the receiving bytes window never shows anything, and finally a window will open with the name of the web site, but nothing but a blank screen is shown...I did setup a folder called "wwwcache" and saved the path from within CAB. I also copied CAB.OVL into my CAB folder...One more thing, from within CAB do you have to point the viewers for GIFs, JPEGs, and TEXT to the CAB viewers? (I mean CAB.OVL and CAB_JPEG.OVL)
2) When I tried Forcast, it said "Bad Handle Connection" and quit.
3) I tried a couple of places with IRC (irc.rutgers.edu and irc.ais.net) but they both gave me error messages...like CP_wait_state returns connection refused by remote...
4) I tried Finger also (persistant, aren't I?) <grin> Anyways it told me that "resolver reached work limits" or something like that...

Since not one client program worked like it should I'm assuming that its a common problem, probably somewhere in my config file...Again any help would be appreciated...Thanks much! :)

First, keep in mind that Usenet news is *not* restricted
to the Internet.

> But with that right comes resposniblity.

For example, whoever you are, whichever of this long list
of newsgroups you come from, *why* post it to comp.sys.cbm? *None*
of this has anything to do with 8-bit Commodore computers. I bet
most of the 8000 nude celebrity pics are in jepg format, which
cannot yet be displayed on a Commodore 64 or Commodore 128. I know
this didn't come from comp.sys.cbm. So I could trim comp.sys.cbm
out and still get to whoever sent this to us 'in public', as they
say, 'no private e-mail'. But what about the *responsibility* to
avoid mindlessly posting this thread to umpteen different newsgroups
because you are either too lazy or too unskilled to trim down the
newsgroup distribution list?
Hint #1: if you don't know how to trim the distribution list,
simply do not respond to a posting that was distributed to more
than 3 newsgroups. It's that simple. If you are spreading this
all over the place for no better reason than lack of knowledge or,
worse, pure laziness, *hold* *your* *tongue*. There's someone
else out there who has the same opinion (or close enough) who
is prepared to take the time to avoid this kind of spam
multiplication.
Hint #2: if you don't *know* what a newsgroup is about,
don't post to it. And it is no excuse to say, 'it was crossposted
on my newsgroup, I just hit "reply".' See hint #1.

Virtually,

Bruce R. McFarling, Newcastle, NSW

As usual, it all depends on what you call a pass, but if you mean a mainly context insensitive parse with context sensitive bits being patched up as the parse proceeded, followed by a separate code generation pass, yes it could be done that way. ISTR many people did it as three passes - context insensitive parse, separate walk of the parse tree fixing up context sensitive details, code generate pass. The Algol 68R subset was truly single pass including code generation - they banned use before declaration except for modes, where they had a Pascal like vestigial "forward" declaration, but see below.

> 2. That LL(1) is a property of a given grammar of a language, and not

> finite. This is not commonly done for complicated languages,
> however, as the LL(k) form is usually significantly more compact than
> the LL(1) form.

Not quite right. LL(k) can be turned into LL(1) but there are LR(1) forms which cannot be made LL(1). (See your nearest Red/Green Dragon Book.) The problem was that A68 was not LL(k) for any finite k when the syntax was augmented with semantic productions. The problem occurred when you met an open parenthesis - it could either be a short form of BEGIN, IF, CASE or a parameter pack. If you are trying for a truly single pass compiler which code generates as it parses, the code generation for declarations immediately after an open parenthesis is impossible, because you need entirely different code depending on whether you're handling normal variable declarations at the start of a block or parameter declarations starting a procedure denotation. You can only tell which of the two forms you've got on seeing the first expression or a close parenthesis followed by the return value mode specification. For a parameter pack with N arguments, you had to look ahead over 2*N lexemes to decide what was happening, and as there was no limit on N there was no LL(k) grammar for the problem.

The A68R compiler handled this with a lexical hack - on seeing an open parenthesis it did a fast and half hearted scan forward. If it only saw modes, identifiers, commas and semicolons before the next close

parenthesis and that was then followed by a mode and a colon, it
turned the open parenthesis into a parameter pack starter lexeme,
otherwise it returned it as a simple open parenthesis.

Fortran has a context sensitive *lexical* structure. Not at all nice.

No. Full ALGOL 68 actually requires 4 passes (typical full language compilers
use about 6).

The sublanguage in my implememntation is essentially 1 pass (i.e. it produces
the intermediate language in 1 pass; after that the Amsterdam Kit does all
sorts of further stages).

|> because pictures aren't as noticably high contrast as the desktop.
Erm, on an TV set, interlacing has nothing to do with restrictions in the
Falcon's video hardware, but with restrictions of a TV. A TV can only handle
15.6KHz line frequency at 50Hz (or ~60 in the US). With that, you can't do
more than 640x200 non-interlaced, it's a simple calculation.

Btw, this even has the advantage that the Falcon can do 640x400 in TC on a
TV, but not on a VGA monitor (without special software).

Ciao

Thomas

Mark Feaver was posting one which he had written several months ago. I
don't know if it's posted to any FTP sites, and I don't have his address
any more. It was sort of like MIDI Music Maker, except his had a simple
sequencer aspect too.

Hey, jerk-off! GEMulator is the salvation of PeeCee's because it allows
them to run TOS! With all the advantages of a CIVIL support group, really
good shareware, and some way ahead of their time (still) commercial packages.
Have you, Sinclap, ever seen an Atari in action? If you haven't, (and even
if you have) why don't you crawl back into your hole and masturbate, or
something semi-useful?

THeo is 100% correct. Since GNVA_TOS is used only by TOS programs, it
would be unusual for any program to need VT-100 graphics. Even if you
wrote one that did, it would only work under the VT-100-aware GNVA_TOS,
not without it.

About the only good reason for having VT-100 support in GNVA_TOS would be
for use as a terminal. Due to the large number of terminal programs out
there for the Atari, both commercial and otherwise, it doesn't make too
much sense to add it.

>use of sigs?

Sorry, I guess I can't read very well, because I didn't see anything in
that quote that was opposed to sigs.

The only thing I remember from the quote was that 'Netiquette' dictates
that you use no more than four lines in sigs, and that advertising in them
is not very acceptable.

>Here's the crux of the matter: You are calling my product identification
>"unnecessary garbage." Let's assume for a moment that you are a
>singer/songwriter. Would you be offended if I told you that putting your
>name on the album cover was adding "unnecessary garbage" to the package?

Traditionally, on the net, that type of product ID has been restricted to
the message headers, not tacked on the end.

As to the label on a record cover, I would not even see it unless I chose to.
I could listen to the record without hearing an advertisement. Using that
same analogy, if all records had the authors name, the record company,
and the producers name recorded on the sound track, at the end of the song,
I am sure there would be many objections from people who would like to hear
the song, but not the ad.

Bill

s>
s> And what is the difference? Just to run new desk enhancements?

Hardly. Support for improved dekstops, sure, but also improved high-speed serial performance, support for TT fast RAM on STs, improved disk performance, support for high-density floppies...

You know, strangely enough, the changes made to TOS over the years were made for the same reasons changes were made to Mac's System, MS-DOS, OS/2, GEM/PC, SunOS, and every other OS I can think of: bug fixes, and improved performance.

If ignorance is bliss, you must be a very happy man.

>
The key word here is "probably". If you are Atari, and buy your 68000s by the thousand, you can afford to throw away the ones that don't work. If you are just buying one, you take a chance on getting a good one.

You should also realise that just putting a faster 68000 in an ST and clocking it at 16MHz is not going to make much difference to performance unless you speed up the rest of the system. The performance gain in the Mega STe comes from the fact that it also has a cache. If you turn the cache off, the performance gain over operating at 8Mhz is barely noticeable. Even with the cache, you typically only get a 1.5 times speed-up. Better software (e.g. NVDI) is a much more cost-effective upgrade!

Eric Noss (mrmaddog@prolog.net) offered:

> You must remeber that not everyone wants to see this stuff.

AND I must also remember that not everyone is required to read a posting with the nauseous word "nude" in the subject line. Goodness me!

Next Tony Greenwood (stosser@airtime.co.uk) cautioned:

> ...postings should take into consideration that minors have just as
> much access to these newsgroups as your consenting adults do. I have
> this personal freedom you speak of, but I dont think it stretches to
> immoral perverted indecency....

Few things will pique an adolescents interest more than for an adult to tell them that something they see as pleasant, i.e., nudity, is "immoral perverted indecency". God, what a weird attitude. You did notice that interested parties had to SEND for this material, didn't you? It isn't distributed on the net and it probably will be MAILED to the recipient. Please note that there was no mention of donkeys, leather, children, etc.

Then Dave Baseley (dbaseley@cartech.com) ordered:

> ....[Blah blah blah (at least three bags full)]....Terminate this
> thread!...this discussion really does not belong here.

It's one of the fundamentals of discuss/debate, Dave, that you don't put forward your views and then imply that there is nothing more anyone else can possibly add by declaring the subject closed!

AND I'M GETTING QUITE TIRED OF YOUR CONTINUAL CROSSPOSTING, TOO, DAVE!

Any program that converts from .IMG to .BMP (or whatever the PC uses).
There are several graphic viewers that convert to a variety of formats-
most notably "GEMview" on the ST.

> use about 6).

I recall reading in one of the standard texts on compilers what those phases were. However, I cannot recall what book it was. :-(It is a long time since I looked at what are the necessary phases of an Algol-68 compiler, i.e. when I thought that I knew enough to write one of/on my own.

If anyone can either remind me either what the phases are or (even better) what book it was that I might have read about them in, I would appreciate it. (I know that it was not either of the Dragon books, or Tremblay/Sorenson, or Waite/Goos, or Barrett/Couch. It might have been Bornat---I remember that he does discuss some problems in compiling Algol-68---but I do not think it was his book.)

> The sublanguage in my implememntation is essentially 1 pass (i.e. it produces
> the intermediate language in 1 pass; after that the Amsterdam Kit does all
> sorts of further stages).

> Charles H. Lindsey

My memory is also troubled by the thought that Lindsey and others wrote a 1 1/2 pass compiler for Algol 68. Is that true? I was told this by someone wo worked with that team but I never saw any published work about it. (The 1/2 pass dealt with forward declared entities.)

Regards, Trevor.

zoggman (zoggman@inlink.com) wrote:
: I have just found a Atari 1040STf. I would like to get as much info as I can
: on this line of computers.

There was the Xerox PARC machine and "the players" - Steve Jobs (Apple),
Jay Miner (Amigo) and Gary Kildale (GEM-software based).

There was Commodore looking for a "machine" and Jack Tramiel who
wanted to be a "player", but was having problems with the Commodore board
and wanted to go his own way. Commodore scooped the Amigo (renamed
Amiga), a creation from Jay Miner (sp) and group. The Tramiels packed up
their marbles and left Commodore (with the "programmers", funny!),
approached Warner and cut a deal for Atari (it was floundering).

During this period (1983? 1984?) the Tramiels fired 1000 of the 1300
Atari employees, wrote TOS (Tramiel Operating System), cut a deal
with Gary Kildale of Digital Research Inc. for GEM (Graphics Environment
Manager) and built a computer. Probably the fastest that anyone has ever
brought a machine to market!

GEM should have been the OS for the IBM line of PC's (DRI kinda dropped
the ball when they didn't take advantage of IBM's offer to discuss using
CPM (Bill Gates . Thus, GEM didn't have the "direct line" to the huge PC
customer base that Windows had with it's DOS customer base.

Thus, the Atari ST!!!!!!!! TOS operating system and GEM grahics! GEM
is probably the most logical GUI around because it takes the office
analogy to perfection. When you "boot up", you are looking at the
green felt cover of a desk. There are icons that look like file
drawers. You double click to open them. Out pops a "sheet of paper"
listing all the folders and any "loose" sheets of paper (not in folders)
laying around. And it just gets better from that point on. My kids
picked up on it in five minutes. I have seen people (this year) spend
months trying to get familiar with the old "tree directory" approach that
Microsoft still uses for Windows. Oh well! Who cares anymore! Tripe
for the masses!

I may have screwed some of this up! So anyone seeing mistakes, then
please correct me! I purchased the ST in early 85 (thereabouts) because
I saw an ad of a computer sitting on a Jaguar with the caption "Power
Without the Price". I ordered one the next week. The rest is
history.

Nyah! That's for wimps (not WIMPS). It is possible to write a C program
that is simultaneously valid and lexically and syntactically different on
two or more different systems. Similarly, a C program can change lexically
and syntactically according to the presence or absence of trailing spaces
(though I believe that this aspect was an honest error).

Bill, I _did_ point out that a portion of that was not under my direct control. The netire block containing
"Jetmail" is added by the Fido mail processor that I use; and since my gating software is under development, I
had not yet had time to deal with minor details like removing extraneous PID lines.

Alos, you say you object to reading it. It's at the absolute bottom of every message wher it exists at all, so
if you're reading it, it's becasue you took the trouble to _FIND_ it so you _could_ read

it. That's why I
thought (and still am inclined to think) you were nit-picking.

> according to what I understand off of the translater, it only works in
> TOS 1.4 and I currently have TOS 1.0 What is a TOS anyways?

TOS is The Operating System. 1.0 was the first one to be put in ROMs.

> Is there a way to upgrade my TOS 1.0 to TOS 1.4, and is it worth the trouble?

Yes, and absolutely yes, it's well worth the trouble. You need new ROMs; you'll need to open the computer and
see if you need a 2-chip set or a 6-chip set.

> I need to install a battery in my computer so that it keeps the time and
> date after I shut it off, anyone know how I can get this done cheaply?

That requires an RTC chip, and it can be installed in one of the ROM sockets, but you'll have to buy the chip. I
have a file someplace that explains how.

> What are some good places I can get software for my computer at really
> low rates?

Start with the various ftp sites and get shareware and PD stuff to begin with. Commerical packages are available
from various sources; my favorite is Toad Computers - send email to info@oad.net and ask for a catalog (they'll
need your Snail Mail address).

> Any support groups on the net for my computer? How about Bulletin Board
> Systems to help support Atari?

http://www.pacifier.com/~pac is the local Atari club; there are many more. There are also hundreds of dedicated
Atari BBSes world-wide. Mine is at 503-244-2870.

> Is upgrading the memory on this computer worth it, if so, what do you
> suggest? (I currently have 1meg)

I couldn't live without the 4 megs on my system. SIMMs are cheap, but you'll need to either buy or make a SIMM
card - again, get the info from Toad, last I heard it was around $90 for a card that would accomodate up to 4
megs.

> Was my $75 investment in this computer, plus another $75 for the monitor
> a waste of my time and money, or do you think I can get off to a good
> start with this computer?

It's a good start, and 1 meg is adequate for beginning.

> I appreciate any help anyone can give me. For your information, I am

The author of Freeze Dried is gone from the scene. Email me and we can discuss how to obtain a key - he has
given permission to distribute under certain circumstances.

I believe that TOS owes an awful lot of it's structure to CP/M-68K, and thus, to Kildall again. GEM was just the windowing system that Kildall was pushing, so it seems natural that TOS (nee CP/M-68K) would integrate well with it.

Oddly enough, MS-DOS with it's close feel to CP/M-86 worked pretty well with GEM, too. The Amstrad line of PCs included GEM and a version of MS-DOS in ROM. Porting well-behaved MS-DOS programs to STs wasn't a big deal. Even down to sector-level disk IO.

John> GEM should have been the OS for the IBM line of PC's (DRI

I think Digital Research must have dropped the marketing ball with GEM, but probably not as drastically as thew screwed up by not selling CP/M-86 to IBM. Years later, DR also screwed up marketing their DOS clone: DR-DOS. Eventually, didn't DR-DOS get bought by Novell and then ruined?

If GEM is the 'office analogy' taken to perfection, it really shows the lameness of that analogy for interacting with computers, IMHO. Computers aren't much like physical desktops, to me. My (real) desktop is piled high with tons of crap sorted in a 'most-recent-on-top' strategy. My file system looks a lot different - it's hierarchical (but not strictly so - hard and soft links are great), neat, clean, and orderly.

I had a Kaypro AT clone on order and cancelled it after reading the Byte article on the ST. I had the only one in town, and it came with TOS 1.? ROMs in a shipping tube and a busted monochrome monitor. After Atari UPSed me a new monitor, I finally got to see my very own GEM desktop machine. I remember finding compiler bugs in OSS Pascal - ah, those were the days.

Anyone besides me remember the humorous asides in the Atari developers kit?

Kelly

The ICD _Pro_ Utilities package is commercial. However, there are utilities (the latest non-Pro versions) that are downloadable from the online services. They shouldn't be available on any ftp site. You can upgrade any old version to the Pro version by contacting ICD and ordering it from them. Or, most dealers will have the package for sale.

c>
>> typically only get a 1.5 times speed-up. Better software (e.g. NVDI)
c> ^^^^^^^^^^^^^^^^^^
c> even if this were the case
c> a 5000000000ercent improvement
c> is a bit more than "barely
c> noticeable"

You jumped on the wrong part there. The "barely" refers to uncached
operation, and while my MSTe is faster than my 8 MHz ST in uncahced mode,
it's still crawling. At 16 MHz with cache on, it's quite comperable to my
office machine - a 486DX2/66 running WIN95 (except my MSTe doesn't crash
nearly as often <G>).

c> As for NVDI, my understanding is that it is a VDI replacement, and as
such,
c> it has no bearing on processes that do not access GEM at all, while
c> speeding up the clock rate certainly does. If we were talking of a
c> *complete* overhaul of the OS, well, that would be a different story.

NVDI speeds up anything that accesses the screen, plus adds GDOS. Since darn
near everything accesses the screen, NVDI speeds up most every program.

But put it on a Mega STe running 16 MHz/cached and you've REALLY got
something - like this machine I'm using here.

>Two STe's buys a PlayStation, what's your point?

First, my comment was regarding an upgrade component, NOT an entire system.
For that which you're bloated Mac requires to run the latest version of your
OS, you can buy 2 ST's and get true multitasking with flawless memory protection
.... '-p

PlayStation can't run Calamus, DynaCadd or STalker.

>cutting edge hardware and apps?...'....)

Who are you trying to kid. Not much in the way of significant
progress has occured in applications for quite some time. Software houses are
just repackaging old ideas trying to put as many fluff features as they can
in the package to justify people buying another version of what they already
had. This is true in general with few exceptions.

The cutting edge hardware would be a lot nicer if there were enough
apps that didn't bog you down on the fluff and bloat.

>

Well, when weighed against a week in the Carribean: a stupid little
box that will be outdated in a year should loose out... if you have
a life of any sort that is...

Last year, that's what 16Megs worth of money could get you...

Oh really? How many children have the money to buy their own computers
these days? How many children have accounts with the phone companies or
ISPs?

This isn't a free broadcast medium. It does take a level of knowledge and
some non-trival expenditure of money on electronics to access.

So? The real problem isn't some spammer but some lazy slob of a parent
that have no clue as to what their kiddies are up to and expect the whole
world to be thier baby sitters.

Nevermind that the ad itself was not obscene (not even by American
standards which are obscene themselves).

>door, would you post a sex advert somewhere you kew minors would have

I think I saw a reference to free ICD tools for the zip drive which work with their commercial package... I'vd had a hunt on the nedt and don't find them.

I was wondering if they would help with my Jaz drive.

Can anyone suggest an ftp site?

(I wish ICD had a web page)

I don't agree. Looks like Atari released the new versions to run the new hardware at the time and not in real advance in features and functionality of TOS.. Time to take the binders off.

5034. TRADE: Monitor Master, Ajax, Replay IV, VIDI-ST for software, etc.

Newsgroup: comp.sys.atari.st
Date: 1996-06-22 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <BbIN01v.lmcclure@delphi.com>
Source record: 142912

```
(1) Practical Solutions Monitor Master switch
(2) Ajax drive controller chip
-
TRADE either for:
=================
* NeoDesk 4
* NVDI 3
* ExtenDOS Pro
* Outburst 3.x
-
(3) Replay IV 8-bit sound digitizer/playback cart (w/software)
(4) Rombo VIDI-ST video digitizer (does 16-greyscale or pseudocolor
capture in real time, or full color capture in 3 passes using
VIDIChrome software and color filters (included) or optional
electronic color splitter
-
TRADE either for:
=================
* 72-pin 4 megabyte SIMM
* Mini-tower or Mid-tower PC case
* 16-bit PC sound card with multi-CD (i.e., including
Sony) interface (for PC)
* Screenblaster or Blowup030
* Quantum LPS105S or LPS120S
* 2.5" IDE drive LARGER than 85 megs
* 0K 72-pin SIMM board for Falcon030
* 256K MIO for Atari 8-bit
-
-
I am open to other trades, these are simply the items I can think of
right now that I am interested in. I am also open to trading multiple
items for items not listed (i.e., larger hard drives or 72-pin SIMMs),
or doing trades + cash.

I don't doubt that any of you think that you know what you are talking
about, but the subject that I want to know about is how to get CAB to work
for me. Is there not another place to carry on this disagreement?
If I can get CAB/Stik to work for me, then I can stop using this Mac
for my Internet stuff, that would be nice.
Thanks.
Paul

>is a much more cost-effective upgrade!

Excuse me, (and I say this without any intention of initiating a flame war), but some of this is nonsense. It is true that clock rate does not tell the whole story, but until recently (I have since first upgraded to a Mega STe, and then to a Falcon) I was using a Mega ST 4 overclocked to 16 Mhz, and the difference with a stock machine was simply stunning. Things like XYpic under TeX, which were impossible to run on an unaccelerated machine, suddenly became quite feasible (although still fairly slow); Photochrome ran incredibly fast (for conversion, unfortunately the picture-showing part of the program is timing-dependent and only works right at 8 Mhz), and I could go on with the list for hours. To tell you the truth, in certain respects the Mega STe feels sluggish compared to the old 16 MHz Mega (of course, the serial ports and other goodies more than make up for the very tiny slowdown). I am willing to concede that there may be solid theoretical grounds for your argument, but the fact is that acceleration to 16Mhz does wonders for performance; and this is not hearsay but personal experience. As for NVDI, my understanding is that it is a VDI replacement, and as such, it has no bearing on processes that do not access GEM at all, while speeding up the clock rate certainly does. If we were talking of a *complete* overhaul of the OS, well, that would be a different story.

Message-ID: <4qfddrqko1@mhadf.production.compuserve.com>
Source record: 143013

Malcolm what exactly happens when you try to run a program?

I don't know how familiar you are with Atari computers so please don't take offe
offence at the following. Are you sure that you are trying to run a program?
On the Atari these normally finish with .prg or .tos or .ttp.

The only suggestion I can make at the moment is to try turning the computer on
without a disk in the disk drive and once the desktop appears then try inserting
the disk and running a program.

Let me know how you get on.

5039. oasis/ice help

Newsgroup: comp.sys.atari.st
Date: 1996-06-22 00:00:00 UTC
From: Neil Newman <100026.425@CompuServe.COM>
Message-ID: <4qfkusrig1@mhadf.production.compuserve.com>
Source record: 143014

I'm trying to get Oasis 2.05 to log onto the Internet via Compuserve, their PPP protocol which uses dynamic ip addresses. My computer is an Atari Falcon with 16meg and math co-processor.

I started with Fpatch2, Drivin and SCC (hsmodem06) programs installed in auto folder and Xcontrol.acc loaded. My modem settings in the modem.cpx were 19200bps, even,7,1,xonxoff. Ice just came up with repeated ATZ with no OK response.

After I added Mint, Oasis logged on via Compuserve and came up with kick news, the command line window had at the top 'general access 70.70.70.70' I tried a few options but nothing happened, after a while the dcd/oh lights on my modem dropped off.

On checking the Ice.log file, had a series of 'bad packet' errors, is their away of viewing what the bad packets are? Has anyone else had this problem?

The receive/send section of my script is:-

```
0:r-IGNORE
0:s-\n
'
0:r-ame:
0:s-CIS
'
0:r-ID:
0:s-100026,425/GO:PPPCONNECT
'
0:r-word:
0:s-mypassword
'
0:r-PPP
0:s-ppp idle=300
'
0:r-IGNORE
0:s-$GET_IP
'
0:r-HELLO
0:s-
```

Also when I run Ice using Geneva the window dialogs, RSC files don't work properly. i.e. if I select 'Display Pref.' the RSC file will display in it window, if I click on anything inside the window nothing will happen, if I then click the window closer the window will close. This does not happen when using Oasis or Ice_net and also doesn't happen

from the basic Atari desktop.

Anyone had these problems or can offer a solution?

Thanks,
Neil.

My 1040 ST has sat in the Garage for too long. I am willing to give it to anyone who wants to take it off my hands. It has a Toadfile 80MB hard drive, a monochrome and color monitor, various and sundry software titles, and assorted other stuff.

If you live in the Dallas/Ft. Worth area you can get it for the price of stopping by. (I'd prefer this way) Otherwise you need to pay for shipping.

I'm only interested in giving it all away at once and not piece by piece.

Dan,

There are still a couple of Atari groups in Dallas. The largest and most
active is AUNT (Atari Users of North Texas). They meet monthly at the
InfoMart .. usually the 2nd or 3rd Saturday of the month .. along with all
the other platform's user groups.

>Any suggestions? Thx, Mark

Sure, copy them to a floppy disk (use one formatted from the desktop, not a special format) and load them up on your PC. Not sure if Paintbrush loads IMG files or not, but surely you can get hold of PaintShop Pro, or Graphics Workshop, or a dozen other PC graphics shareware programs which load both IMG and the Paintbrush PCX files (and convert between them).

Or you could get ImageCopy (now up to Version 4) on the ST and do the conversion to PCX files on your MegaSTe.

5051. Bad Falcon problem solved (was:HELP Bad falcon problem)

Newsgroup: comp.sys.atari.st
Date: 1996-06-22 00:00:00 UTC
From: istvan@innet.be
Message-ID: <4qgg0k$110@news.be.innet.net>
Source record: 143026

Hye!

The bad problem is solved. It was computer/harddisk error.
After the crash it wouldn't boot anymore. If I turned off all acc's,
auto prgs, and re-installed [another] hd driver, I could boot from HD.
The cubase problem (running toooooo slooooooow -with fdi
connected/normal without -) was also caused by this event.

Then I started putting some other programs in tha auto folder, and
those DID work?!?!
The by chance, I tried to run HDX, in order to zero a partition and
what happened? I saw AHDI booting!

That was weird. You clik on program and something eles comes up. Upon
examining the sectors of HDX is see the code for AHDI!
When examining all the acc's and drivers which were problematic, I saw
the ALL these were over written by the system with AHDI.

Well, I put all the original stuff back, and all runs perfect again.

I was using hushi.sys at the time. Normally I work with AHDI allwas,
but soomeone suggested me to try hushi.sys.

Now I'm back to AHDI, whis is coping well with my hardware. Why would
I need another. I get 8 trax of playback (44.1) so more I don't need.
Thanx for all the concern about my files but all is safe.
Namely what happened , IMXHO

HARDWARE: Falcon; 4m ram
50Mb ide(cdef)
540Mb quantum scsi2
2*1Gb Quantum Sonic Solutions SCSI
Soundpool FDI
,, MO4
Screenblaster 'ext', SbIII software, Eizo 6500 21" mono mon.

At time of crash resident software:
hushi.sys
fdi-init
sb_auto.prg
xcontol.acc
edieutil.acc
mo-4.drv (soundpool MO4)

All thes were overwritten (partially) with AHDI, which WASN'T resident
at the time.

I hope I've been able to save someone a lot of trouble with this
story...

John you need to contact Kevin Osborne (NeST 90:102/0) on Fortress BBS
as he is the UK support site for the programs.

There is a public key available, since the author has dropped out of
developing it he was kind enough to make his key available to all.
Its usual name is FZDSTERM.KEY

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

SUBJ: Gemulator 4.15

>> What do you run on your Gemulator and what does/doesnt work for you?

s> jabba, Tos is not good enough for you...)?

Well TOSsing off seems to do you some good, although in your case it seems to have affected your co-ordination, there are times when you type some real dribble. Perhaps you should give it up.

Instead you could try one of my favourite 'dares', try disconnecting the earth on an electrical appliance and the with wet fingers grap it, if the insulation is good you will win the game, if the insulation is bad you'l get a finger blown off or something, that would be a lose.

s> | Peter Sinclair-Day POWER MACINTOSH 7100/80 |

Hm!, i bet you can get some real good games for this beauty.

I used to have one of these, but in reality it wasn't much good coz i was such an asshole and coulndt see that it was only as good as the software i ran, and the software i used depended on what i wanted to actually do with the machine. So i realized that it was just a stupid piece of plastic that wouldnt work any better than anybody elses machine at the end of the day.

Can i have your autograph and maybe a picture for my wall, you see you're my hero, in fact i think i'l ignore everybody else in here and just talk to you from now on.

Now you go enjoy yourself by upsetting these other low-lifes, Have a nice day, dont let them get to you.

Can i share a problem with you since your my friend, i keep getting these voices telling me to do things, can you give me some advise, maybe i can come and visit you at your university of Rectall implants or whatever its called.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

5061. TOS 2.05 and 2.06. What's the difference?

Newsgroup: comp.sys.atari.st
Date: 1996-06-22 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <14963_hsideras@mettav.demon.co.uk>
Source record: 143036

Hi Julian, on 20 Jun 96 you wrote:

j> Organization: connexus.apana.org.au
j>
j> I have just got a Mega STe with 4 meg of ram. It's got TOS 2.05 in it.
j> What has 2.06 got that 2.05 doesn't?

The Atari Logo at bootup, IOREC fixed and RTS/CTS bug fixed.

j> Also: Are there any handy programs that I really should use?

Apart from SCC.PRG with HSModem (although it ought not to need it I've found
that transfers do run smoother with it) there are specific utilities that run
in the AUTO folder that will switch to a 60Hz display if your machine
normally boots in 50Hz (it does here in the UK) and another that will switch
to 16MHz or 16MHz plus cache. Note that a MegaSTe normally boots at 8MHz for
compatibility with some games etc, unless it's specifically switched up using
an Auto prog or with the General.CPX

Apart from that I can't think of anything MSTe specific...

>something - like this machine I'm using here.
>

I'd agree to most of the above... My MegaSTE really flies, and NVDI
really makes it look fast (on the desktop etc.)

However there are quite a few programs which NVDI doesn't speed up...
and thats anything that sits around for a few seconds doing
calculations, for exmaple ray tracing, Archiving and de-archiving
(screen writing is minimal compared to actual compression and
decompression) etc. etc. These things use the 16Mhz and cache to the
full, and really don't need NVDI for a speed increase.

NVDI however makes the computer look real fast, when you open windows
instantaneoulsy etc. !

However in raw processing terms I wouldn't say my MegaSTE is as fast
as my (crap) 486sx25... in Windoze its slow... very slow, but when you
bung some processor intensive task, like archiving its quite fast !

5069. Cab/mintnet & runtime errors

Newsgroup: comp.sys.atari.st
Date: 1996-06-22 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <835558630_OASIS_@ping.be>
Source record: 143044
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello World,

I've posted my problem already in these newsgroups but no one answered
the question. So I post it again in the hope that this time a kind
soul will give me an explanation or the solution to solve the problem.
I've cab 1.31 with the cab-for-mintnet-1.77 overlay running on
my TT. It works more or less good. The major problem is that
some URL's always give me a runtime error 204 at offset $blabla.
One such a page is http://www.dma.be/p/bier/bier.htm
It seems that the runtime error occurs when cab tries to convert
the images but I'm not sure of that. Anyway looking at the
wwwcache folder I noticed that the downloaded pictures were all
in gif89a format. Could this format be the troublemaker?
Needless to say that every help will be appriciated.

Martin

>Ok, let's forget the time, for now, and talk about the wasted storage space.
>How many messages are posted, daily, on the net? Let's say there are 2,000
>news groups(I think there are more). Let's say there are 2,000 news sites,
>world wide(maybe more, maybe less).

I think 13500 is a better estimate.

>Let's say each group gets 5 new messages
>daily(I'm pretty sure most get many times that).

Try 150 as a good average

>OK, 120 wasted characters
>per message. That's 2 bytes per character, times, 120 characters, times,

Last time I checked 1byte/char

>2,000 newsgroups, times, 2,000 sites, times, 5 messages. That's 2.4 giga
>bytes daily, times, 30 days per month, DO the math. That's a fairly
>substantial WASTE of bandwith.

13500*120*150 = 243 MegaBytes / day for each site

sure thats a lot of junk.... but then look a the rest of crap floating
around on usenet !! the SPAM, most of the messages themselves, and I
think you'll find that there are many thousands of Gigabytes flowing
each day.

So what ??? well I'll tell you what.... 243Meg is 'insignificant' it
hardly uses up any bandwidth, espicially if you start to include
IRC,WWW,FTP and email. When you take these into consideration the
ammount of bandwidth wasted by emails is so insignificant that we have
probably generated more bandwidth in this discussion that sigs do in a

whole year ! :)

Check out your Monitorsetting in Falcon's NVRAM.
Chanche this Setting to VGA you have connect a VGA Monitor
Chanche your Setting to RGB/TV with a connected SM1224!

Make sure you have connected the right Monitoradaptor for RGB or VGA
to Falcon's Videoport.

>resolution. Am I mistaken? If so, are the high-res color modes
>interlaced when using a VGA monitor with the Falcon?

Wach out for you NVRAM Setting. Check your Monitor wireing
Use BOOTKONF.PRG

(Your new setting disapears after reboot this machine)

Sounds like DNS problem, try
NAMESERVER = 194.80.132.2

in default.cfg.

Yours etc.

What are these significant advances? The only advances I see is that these versions were for on the various ST hardware which has totaly failed to keep up..

I'm an Atari 8-bit user and have never even SEEN an ST but have 3 START disks I'd like to get into the hands of someone who wants them. They are: Jan 91 vol 5 num 5, Feb 91 vol 5 num 6, and Apr/May 91 vol 5 num 7. They've never been used & I don't know if they'll work or not. If interested, send e-mail.

It does sound very much like you have not got STiK fully operational
yet. There's two areas you ought to check out next.

1) Your provider is giving you SLIP and not CSLIP. CSLIP is
compressed using a thing called VJ compression and wont work
with STiK atm.

2) Having sorted (1) out, check out the DNS (NAMESERVER) - that
it is a valid dotted decimal address. Although it is obviously
best to use the one recommended by your provider I believe it
is possible use just about any DNS.

Well, I have been offered some real 16MHz parts so I guess I don't have to
take a chance.

>You should also realise that just putting a faster 68000 in an ST and clocking
>it at 16MHz is not going to make much difference to performance unless you

>NVDI) is a much more cost-effective upgrade!

I understand this. My Atari is a "pet" computer, meaning I want to upgrade
it on my own just for the fun of it. The parts are quite inexpensive and
there is a lot of moderately good info available.

I have translated a German document describing the upgrade with slight
modifications if anyone is still interested. Keep in mind I haven't yet
done the upgrade myself.

Hello,

After posting my previous mail I discovered that I was talking
nonsens about that gif89a format. That format is obviously a standard
for the web.
Back to the runtime error. This seems to occur when Cab tries to
convert the images. Looking at the wwwcache folder I noticed that the
picture where corrupt (at least I can't read then with any
pictureviewer I have).

5096. HSMODEM & Falcon help!!

Newsgroup: comp.sys.atari.st
Date: 1996-06-23 00:00:00 UTC
From: dpj@delphi.com
Message-ID: <pTNOMfn.dpj@delphi.com>
Source record: 142931

Help!! <g>

I'm still having problems calling out on the Falcon at speeds higher than 9600 baud. I've configured HSMODEM according to an article in Atari World (thanks again, Mitch!), but all I get is garbage when I connect here, or elsewhere.

Is there anyone here using a Falcon and getting in at 14,400 or higher? I'm using Flash II. I've tried the Control Panel modem settings at 19,200 and RTS/CTS enabled. Same with RS232 settings in Flash II. 9600 baud works fine, but nothing higher.

When I ran SETTER.TTP to configure HSMODEM, here are the settings I used, per the article:

```
M2TT: U
M1EMU: U
LANBIT: N
LANEXT: N
LAN_S2: U
DTRM2: Y
DTRS2: Y
?: Y
RBLM2: 16384
TBLM2: 8192
RBLS2: 16
TBLS2: 16
```

I'm using HSMODEM 6E.

If you can help, please drop me a line ASAP - this is driving me crazy!
TIA!

-Dana

5097. Falcon/stzip

Newsgroup: comp.sys.atari.st

s> Oh, I show my ignorance.

Every time you open your virtual mouth.

>>> System 6 which is memory lean but lacking many functionality that we Mac
s> users take for granted in in 1996 with System 7. I call it progress.

You obviously consider a system that requires 16 megs of RAM progress because
the Marketing people told you to. The rest of us consider progress to be an
increase in speed, operational capacity, or reliability.

>> So, what does System7 have that you absolutely need and System6 does
>> not have.
s>
s> Ah, Beavis...Quicktime, Applescript, OpenDoc, CyberDog and too much more
s> to list...

Quicktime: Available for other platforms (there's even an Atari version),
not part of System 7 at all.
Applescript: batch files, available on other platforms since, oh, let's say
1975 to be conservative.

Learn how to edit, you're in Library Media, you ought to know what "edit"
means.

phil4@phil4.demon.co.uk barked in U.COMP.SYS.ATARI.ST on 23 Jun 96:

p> You can scan in two extra disks... A and B, use the right hand most
p> menu on the little magic dialog config that pops up at the start of
p> the demo, the leesen option is what you want (German for read ???).
p> So you can try and use your worn programs, etc. however drive C is
p> limited to 8Meg, and this apart from A and B are the only drives you
p> can use (Nb. use B as another 1.4 Meg Harddisk, the files are stored
p> on harddisk anyway !).

So they are. And yes, "lesen" is German for "to read."

>> p> If you have Magx english version... you can replace the version
>> p> supplied with your own, in english.
>>
>> Ehrm... If I had the English version, why would I be running the German
>> demo?
p>
p> Because there is ONLY a German demo of MagicPC, and if you have and
p> English version of Magx (for ST, ie. with Magic 4) then you can use
p> this for your desktop, and therefore have menus in english.

Apparently, then, there's a particular file that you're referring to.

p> BTW: as the creator of Gemuolator pointed out MagicPC does indeed
p> cheat like crazy with GemBench. Check the times that Gembench quotes,
p> and you'll see they are about 1/2 of the time it actually took to do
p> the test !
p>
p> So don't trust GemBench, or anything that uses the 200Hz timer for
p> the tests !

That would indicate that the 200Hz timer is actually running at about 100Hz.
Not surprising under WIN95 - as I suspected, MagicPC is badly crippled by
relying on a MicroSlop OS.

5103. FS/Trade: SLM805 Laser Printer & Interface

Newsgroup: comp.sys.atari.st
Date: 1996-06-23 00:00:00 UTC
From: mbates@s3.sonnet.com
Message-ID: <mbates-2306961731240001@ppp10-stk.sonnet.com>
Source record: 142938

Hello,

I have an SLM 805 Laser Printer with Interface for sale or trade. I do not have them manuals or software but I do know that B & C has them available for $30 or so.

I would prefer to trade this for Atari 8-bit hardware or software but will sell for a VERY reasonable price if I have to!

Thanks

-Marlin

I think there's one on one of the Army's PD disks, but I no longer have
access to the library. Let me look at the old disk box... Sorry, no luck.
I do know it exists, but it has been several years since I bothered to run PC
programs for that sort of thing. Is there a reason you can't run GEMview or
one of the other ST conversion programs?

Must sell. Perfect condition. Local Atari dealer (Run PC in Fort Collins, Colorado) can verify condition for you. 4MB RAM, 85MB internal Hard Disk, all the standard Falcon030 software (Atari Works, MultiTOS, SpeedoGDOS, System Audio Manager, Calendar / Appointments, Minesweeper, Breakout, etc.) $475/obo. Includes adaptors for VGA and Atari ST monitors and over $1000 worth of original software titles (Geneva, Neodesk, LDW Power, WordPerfect, Pagestream, Creater SL MIDI sequencer, GFA Draft +, MultiDesk Deluxe, Atari Compendium, GFA Basic 3.5E, Steno, Stalker, Flash, etc.).

Accessories:
NEC External SCSI CDRom Drive w/ Extendos, Audio CD Master, and Gemini CD, all working great - $85/obo
Hewlett Packard external 1.6Gb SCSI Hard Drive -- fast and works great on Falcon for digital audio, etc. - $290.

All above for $800, including shipping within US or Canada (will accept Canadian currency).

SC1224 Color Monitor, works great - best offer or include free with above package

MAKE ME AN OFFER! Everything guaranteed to work, and I'll be happy to help you get it going.

Source record: 142944

Hi. I'm joining this 'tagline' debate a little late, so I hope I'm addressing the right folks. :) All in all, I don't really mind the taglines, sigs, etc., or whatever they are called.

However, your responce seemed a bit harsh to a rather kindly worded request??? :)

<R> I suggest that you do a little math if you think I'm "wasting
<R> bandwidth."

<R> (1) I'm not using a .sig file at all; that's 80
<R> chars * 4 lines = 320 chars per message that you're saving
<R> because I'm a nice guy. At 14.4k bps [...] you'll
<R> save .22_ seconds per article [...] If I post a hundred
<R> articles per day [...] you'll save 22 seconds.

<R> (2) The total number of characters in the lines appended by
<R> UUCP-ST [...] is less than 120. [...] it will cost you an extra
<R> .083_ seconds per article.

<R> (3) Jetmail appends its own stuff after the tearline [...]
<R> however, again it's adding less than 120 characters.

If I understand this right, about .35 seconds total of time is added to each message, if everyone adds all of these.

Now again, I don't mind these tag lines & etc. But I do download about 500 messages a week from various echos/ groups/ what-you-call-them. I think that comes to about three minues a week. Or, two hours & 36 minutes a year? If my math-brain-cells are still functioning. :)

I live in a rural area of the USA. To access this, I call a long distance BBS. It seems like you don't mind at all for costing me $15-20 a year. And hey, I don't really mind. Once in a while I see a creative one that brings a smile to my face. $20 a year probably makes the phone companies happy, and isn't really putting me in the poor house.

But, you do have to decide - it is really polite of you to ridicule someone we are costing $20; 2.6 hours of time; and most importantly, boring to death with repetitive tag/sig/jet(???) lines?

Just something to consider. :)

Once again, I don't really mind the tagline/ sig/ whatever's, ok? I just like to argue mindless points... :) :) :)

RT> Here's the crux of the matter: You are calling my product
RT> identification "unnecessary garbage." Let's assume for a
RT> moment that you are a singer/songwriter. Would you be
RT> offended if I told you that putting your name on the album
RT> cover was adding "unnecessary garbage" to the package?

I would certainly expect you to have your name on the packaging that comes with your product.

However, if the singer placed his name in a track between every single song on the album, I would get a _little_ irritated by that!!!! Perhaps you should rethink your analogy? :) :)

It seems your name is added to everyone's _message_, not to your _product_. So while I don't mind you doing this, I can understand the arguments of those who do... :) :) :) :)

5112. Toad Computers' Catalog

Newsgroup: comp.sys.atari.st
Date: 1996-06-24 00:00:00 UTC
From: mghembru@dictator.uwaterloo.ca
Message-ID: <DtIwrD.4o9@novice.uwaterloo.ca>
Source record: 142806

So, finally, last week I got the Toad catalog. Not that I'd been dying for it, but I signed up for at least 3-4 months ago. No worries. But, some of the claims they make!

For the ICD AdSpeed ST (paraphrased): This ugprades your ST to 16 MHz. Now, 16 MHz may not sound very fast compared to a Pentium 90 (now Pentium Pro 200), but the 68000 is a very efficient processor.

I've programmed the 68000 in assembly. I've tried to learn x86 assembly. I can appreciate that the 68000 is nice to program. But comparing a 16 Mhz to a P90! I think the 8 MHz 68k was listed at 1 MIP. That would make the 16 MHz 2 MIPs. A P90 is running what - conservative guess of 30 MIPs. That's 15 times faster. That's a BIG difference. Heck, I'm sure that if you ran Linux on a Cattamaran TT vs. a PPro 200 (or even a P150), there's no question which chip is faster. I suggest Linux because I'm hoping that the code is somewhat similar. Comparing Word 6 to Word Writer ST is a little silly..

5115. AHDI and Neodesk

Newsgroup: comp.sys.atari.st
Date: 1996-06-24 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <4qn8ol$jn4@dodgson.math.psu.edu>
Source record: 142809

When using AHDI (6.0.4, I believe) to access an external HD drive on my Falcon, the first time I open the drive, it is a bit slow, but then, subsequent access is quite fast (presumably because the first time around the folder and FAT info is cached and on subsequent access the information is read from the cache and not from the disk). Now, when using Neodesk (4.5), every disk access (not just the first) is excruciatingly slow. Why? Has anybody else experienced this problem? Are there any fixes (preferably some that don't involve spending $$$).

This does not happen when using CBHD, but CBHD cannot handle the internal IDE drive. I tried using AHDI for the internal drive and CBHD for the internal one, but this brings along other problems:

1- it is inefficient memory-wise.
2- if I use Geneva, I get bombs if AHDI and CBHD are both resident; the only way to do it (short of loading CBHD manually from the desktop) is to use the Geneva "run" command in gem.cnf, but this in turn means that whenever I change resolutions, since Geneva gets re-loaded, CBHD "finds" a new drive each time.
3- certain programs (like Cheetah, for example) complain of errors reading the FAT, something that makes me *very* nervous.
4- I'm not sure how well this arrangement works with removable media (I use an EZ135)

Any suggestions will be appreciated.

Gustavo

In article <1996Jun22.172723.55386@cobra.uni.edu>
sinclap2954@cobra.uni.edu (PETER SINCLAIR-DAY) said:-

>What are these significant advances? The only advances I see is that these
>versions were for on the various ST hardware which has totaly failed to keep
>up..

Wrong, wrong, WRONG! The various TOS versions did take advantage of new
hardware as it was added. (of course!) Bug fixes were constantly added.
(of course!) Many new features were added along the way...the biggest
advancements were made from original TOS to TOS 1.04...then from there
to TOS 2.05/2.06...and TOS 4.04 is worlds above those TOS versions...I
could list everything new that was implemented, but it would take awhile.

Wait a minute, lets think this over...if I -don't- list at least some of
the various enhancements, then you'll simply say that I couldn't find any
or they don't exist, so with apologies to all the ATARI users...

(These are just a few of the enhancements with TOS v2.06...v4.0X has many
more but this should suffice to give evidence...even to someone like you
Mr. Sinclair)

1) Auto-memory check at boot-up.
2) Hard drive spin-up delay.
3) Install programs, files, and folders on the desktop as icons.
4) Change resolutions with ALT number key commands.
5) All available devices can be installed in one easy desktop operation.
6) Icons can be "sized" to fit an open window. (no more scrolling)
7) Background color and fill pattern are user configurable.
8) User selectable icons can be assigned to devices or files.
9) Files can now be moved, moved and renamed, or copied and renamed in
one -very- easy operation.
10) UNDO aborts current file operations.
11) Windows can be scrolled and selected files will remain selected.
12) Select all items within a window.
13) Start programs with function keys, "Install Applications" now lets
you assign up to 20 executable files to function keys for fast load
and running.
14) Most desktop functions now have "batch" ability, multiple selected
files will be shown to the user, one after the other with the option
of skipping the operation on that file...
15) Global de-selection of files is now possible.
16) Arrow keys can be used to scroll an open windows contents.
17) Drag 'n drop implemented. Dropping a data file onto its associated
program starts that program and passes data to it.
18) File copy to any drive by dragging the drive icon and dropping it on

its destination.
19) Ability to bypass Auto and ACC's by holding down <Control> at boot-up. (very handy for conflicts)
20) Enter special characters with ALT numeric keyboard combos.
21) Powerful built-in search tool added the desktop.
22) File masks have been added, allowing you to only show specific file types.
23) Multiple desktop configurations supported. Libraries of Desktop.Inf files can be created and used via the "Read .INF File" option.
24) Print contents of topped window or directories as ASCII text.
25) "No File Sort" option added. Useful for observing how AUTO folder programs are really ordered.
26) Seven open windows are now allowed, previous TOS versions only allowed up to four.
27) Bottom windows can be topped via a desktop option or easy keyboard command.
28) Keyboard commands now available for most desktop operations.
29) Keyboard commands are user-configurable.
30) Help key support for the most common commands.

This is just the tip of the iceberg...there are many other items but I'm tired of typing...<grin> I'm not saying that these changes were earth-shattering but anyone can see that many are "significant". Like I said, Mr. Sinclair, even you should be able to get the "point"...TOS has indeed advanced, and advanced considerably from its origins to the Falcons -very-nice desktop...Thank you.

5124. Broken Disk Drive

Newsgroup: comp.sys.atari.st
Date: 1996-06-24 00:00:00 UTC
From: jab@spruce.ee.ed.ac.uk
Message-ID: <4qlhob$8an@scotsman.ed.ac.uk>
Source record: 142818
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Folks,

my trusty old ST has just given up the ghost. When you put a disk in the drive and switch the machine on, the drive whirrs away for a minute or so, and does not recognise the disk. I have had a look inside, and the read head does not move across the actual disk, it starts to, then just clicks back. I cannot make the machine do anything. Formatting a disk produces the message: "missing or damaged disk: check drive.".

Has anyone any ideas? Can I stick an old 720K 3.5" PC Drive in there? What about a 1.44Mb drive? Is it likely to be the drive or the controller on the main board?

It *is* an old machine, but it's handy for word processing.

cheers

>adjust to make the flickering more tolerable?

A possible little fix (but there is no miracles: a VGA display is much
better): set to one the bit 3 of the ffff82c0 register, it produces better
interlacing... The Videl displays odd lines between even lines... but on
every resolution change, the Xbios set this bit to zero, and the Videl
will display odd and even lines on the same place, causing much more
flickering...

>(thanks again, Mitch!), but all I get is garbage when I connect here, or
>elsewhere.

Well, you can use HSMODA6 exactly just like dezipped, without any
configuration, at 115200 bps... I am now at 57600 because I noticed many
transmit errors at 115K when moving the mouse (?!). Just put 2 programs in
the AUTO folder: first DRVIN.PRG, second SCC.PRG. And for speed reason, as
late in the AUTO order as possible.

The only config you can do with setter.ttp, is for tune up get bigger
Tx and Rx buffers for modem2 port, I've set 32766 bytes each.

>repeated ATZ with no OK response.

To allow succesfull PPP negociation, you must set modem.cpx to 8 bits,
no parity, 1 stop bit, RTS/CTS. And for speed, you can go higher than
19200, I personally use 57600 (with hsmoda6 remapped as 134 bps).

>The receive/send section of my script is:-
>
>0:r-IGNORE
>0:s-\n
>'
>0:r-ame:
>0:s-CIS
>'
>0:r-ID:
>0:s-100026,425/GO:PPPCONNECT
>'
>0:r-word:
>0:s-mypassword
>'
>0:r-PPP
>0:s-ppp idle=300
>'
>0:r-IGNORE
>0:s-$GET_IP
>'
>0:r-HELLO
>0:s-

AFAIK, on Compuserve there is no "ppp idle=300" login command... and
the $GET_IP command is only for SLIP negociation, not for Compuserve PPP.
Here is my Oasis 1.35 logon script:

```
----------- 8< ----------- 8< ------------
cwait 45000 "CONNECT" "BUSY" "NO CARRIER"
send "\3"
```

```
cwait 40000 "ID:" "NO CARRIER"
# Replace 'user,id' with your User ID and 'YourPassword' with... your password!
# send "user,id/go:pppconnect\\YourPassword\r"
send "100710,1360/go:pppconnect\\MyPersonalPassword\r"
cwait 10000 "please..."
----------- 8< ----------- 8< ------------
```

As you see, I begin sending a \3, or ^C in place of <CR>, then you do not have the "Host name:" ==> "CIS" stage. At the UserID prompt I respond directly with it, the desired connection mode, and the password separated by a backslash (doubled only beacause it's a string escape caracter, just like in C). And just after the "one moment please..." message, the PPP negociation begins.

Now the dynamic IP problem: on NOS, it's done by setting to 0.0.0.0 the ppp local address: set in the STARTUP.NOS file the line "ppp sl0 ipcp local address [0.0.0.0]" and NOS knows it must negociate a dynamic one with the server!

I hope that this will help you with Oasis 2.05 and ICE! bye!

5128. Legal Jargon Required

Newsgroup: comp.sys.atari.st
Date: 1996-06-24 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <835705656_OASIS_@phil4.demon.co.uk>
Source record: 142822

I'm looking for legal jargon type text, to include in the text files, of programs that I write, hopefully to remove me totally from responsibility, of the program and its actions, covering things like the program trashing poeples files, or harddisks, either on files they which to use the program on (and the program either doing the right or wrong thing) or on other files (which it wasn't inteded to be used) and anything else that could possibly go wrong through the use, misuse, or anything else of the program or its files.

If anyone has jargon which they use, and wouldn't mind me including in a final remix for my own use, could they please either send it to my email address:

phil4@phil4.demon.co.uk

or post it here.

Thanks

ATb.

>I have just got a Mega STe with 4 meg of ram. It's got TOS 2.05 in it.
>What has 2.06 got that 2.05 doesn't?

SNAP !

From what I've found so far here are the following difference between
TOS 2.05 and 2.06:

i)NO Atari logo and memory test on bootup (but then you don't know
what there look like anyway !)
ii)Pressing ALT+KEYPAD Numbers allows any ASCII char to be selected at
almost any time in 2.06
iii)The Modem flow control bug has been fixed, so that HSMODEM _will_
work with 2.06 (HSMODEM doesn't work with 2.05, as the flow control
messes things up !).
iv)Some compatibility improvements (however there are still quiet a
few programs that won't run on TOS 2.06 so don't go out and buy it
just cause you're having a problem with a program, check here that it
works with TOS 2.06 first).

So far I've managed ok with TOS2.05 without many problems... however
If I get a 28800bps modem I'll need to upgrade TOS to 2.06 so that the
flow control is fixed and I can use the faster modem speeds.

>
>Also: Are there any handy programs that I really should use?

Theres a couple of programs that switch the computer to 16Mhz instead
of 8Mhz, during bootup, which speeds bootup.

Are you new to ST's in general ??? cause there are a few programs for
atari's in general that make them much nicer to work with (eg. NVDI
!).

5130. Slip or PPP software?

Newsgroup: comp.sys.atari.st
Date: 1996-06-24 00:00:00 UTC
From: smooth1@panix.com
Message-ID: <4qlabe$lt4@panix2.panix.com>
Source record: 142855

I'm wondering is there some easy to setup software out there? I've tried Stik and Cab and also Oasis with no luck. With Stik I use to get as far as "your IP Address Is" before freezing... now I can't get past the name. My dial.scr looks like this:

```
FIND = Username:
RESP = <my username>
WAIT = 5

FIND = Password:
RESP = <my password>
WAIT = 5

FIND = to
RESP = $Get_IP Address
```

Oasis, alot easier to configure, on the other hand I can't get to do anything. It seems to logs on but nothing happens. it'll say kick mail or news or something. Things like show mail and news window show up but nothing. even after sending my self e-mail.

If someone know of some easier software or can tell me what I'm doing wrong I would be ever so greatful. Thank you!!!!

I remember reading a very long time ago that AppleTalk was supported on MegaSTs ONLY because they have something called MegaTalk which was similar. It's my thinking though that it should work regardless because the printer port is simulated (I can print to a printer using an appropriate driver). So why won't it work using a null-modem cable?

Hullo fellow Atarians,

I've a few thoughts on this `thread'. I remember a Star Trek episode where there was a creature who fed on human emotions. It was an interesting idea; one which has basis in the world we live in now. There are people who get pleasure from antagonis(z)ing others and watching the reaction. I'm sure a psychologist could give you a character profile of such an individual; underachiever, socially inept, etc, etc...

One thing I've learned is that if you keep feeding the beast, it comes back for more. If you want it to go away...

Just stop feeding it!

Bye for now,

Ali.

Ok, I'll bite. Explanation or example? (I hope this isn't character set tricks.)

> Similarly, a C program can change lexically
> and syntactically according to the presence or absence of trailing spaces

An honest error but a @$%^ing nasty one when it bites. IMO whitespace at the end of a line that can have this effect should be flagged by the compiler with flashing neon lights, loud sirens and emergency flares. (I believe these will all be available in the next version of HTML.)

|> set tricks.)

No need. Something like:

```
#ifdef _POSIX_SOURCE
#define nifty(a) int a##_
#endif

...

int main() {
int a;
nifty(a);
}
```

|> > Similarly, a C program can change lexically

|> HTML.)

I agree. The honest error that I referred to was in the design of
the standard - I don't think that anyone realised the consequences
of the wording until it was too late! Incidentally, the horror is
in constructions like:

```
#define A \
...
```

The '\' concatenates the lines before pre-processing if and only if it is the last symbol on the 'line'.

> not some up MagiC 5 and report back to sys.atari.st?
The big news in MagiC 5 are threads (interesting for programmers) and a
VFAT Filesystem, that allows long filenames in a Windows 95 compatible
manner.
There was plenty of talk about the Windows Filesystem in the german
mouse group, they implemented it because it is quite easy and they
needed it for the MagiC PC emulator.
Most people would prefer a Minix Filesystem, but that is not too easy,
because you had to do a complete rewrite (MagiC has background DMA, so a
filesystem has to be written completely reentrant, which the
Mint-Sources aren't) - don't expect anything soon.

You can use your old ST monitors for the Falcon, but then you can only
use the normal STe video modes. (IIRC)
Otherwise, you can get a standard VGA monitor. Or a TV.
For the TV, you only need a cable, for all others you will need a special
adapter for that monitor.

You don't need an adapter to connect your hard disk if it's standard SCSI.

As a consequence of the context of this code I feel compelled to question
this. Shouldn't all cpp directives start the line with a #. This is another
white space comment. Ie:

#ifdef _POSIX_SOURCE
# define nifty(a) int a##_
#endif

Not as of ANSI/ISO/whatever C. The # must merely be the first
non-whitespace character on the line. I've never actually dared to use
this feature though as I have to live with 9 different compilers.

: resolution. Am I mistaken? If so, are the high-res color modes
: interlaced when using a VGA monitor with the Falcon?

No, none of the standard Falcon030 video modes are interlaced when using
a VGA monitor.

5154. Problem formatting a QUANTUM 210 MB

Newsgroup: comp.sys.atari.st
Date: 1996-06-24 00:00:00 UTC
From: prajoux@chnou.laas.fr
Message-ID: <4qmbll$fc6@laas.laas.fr>
Source record: 142879

I recently acquired a used hard disk QUANTUM ProDrive 210S to put INTO
my MegaSTE.
I configured it as device 0 and parity disabled.
Using HDX 5.04 I tried to format it and failed. HDX recognized the disk
correctly, but refused to format, giving a message like "Can't do
formatting. Check connections......"
I was about to give up when I got the idea to try accessing the disk.
It worked. I could read and write with no problem. So I discovered that
the disk was divided into 2 AHDI-compatible partitions of 104,472 MB each.
Then, I tried to re-partition and failed with "This disk was formatted
using a previous version of HDX. Please reformat." This, I can understand.

So, these are my questions:

(1) Does anyone has an idea of what could prevent that disk to be
formatted, while allowing to read and write?
I suspected a jumper named SS (spindle sync) but it has nothing to do
with the problem. Perhaps another jumper? (there are also jumpers
C0, C1, P0), or whatever?

(2) I have seen that SCSI terminating resistors are mounted on the disk,
while there is none on the original 44MB because they seem to be mounted
directly on the internal adapter of the MegaSTE. Should I remove the
resistor on the disk, fearing an overload of SCSI lines, i.e. a danger
of random data corruption?

I would be grateful for any help on the subject. Thank you.

This is absolutely how it should be. The '\' symbol is used throughout
C to change the meaning of character-tokens - eg \n, \t etc. The use
of '\ ' (slash-space) is perfectly valid in this case, and thus saying
"oh, why hasn't it worked" when you haven't actually put '\<CR>'
at all is silly.

I can't say I've ever come across the problem. If you use a decent
editor it shouldn't happen.

Sigh. The naivety of the young. You have clearly never had to
install, modify and debug 500,000 lines of somebody else's code,
have you?

|> This is absolutely how it should be. The '\' symbol is used throughout

The word 'naive' lacks sufficient force :-)

Esscode (ESSCD64.ZIP) handles BASE64 (Mime) very well and is a GEM
app.

How to use BASE64.TTP is detailed in DOC\MAN1\BASE64.MAN in the
HERM_114.ZIP package.

Both are available at various ftp-sites.

Brian Roland (bjr@EbiCom.net) wrote:
: Is there a way to Geneva Tos to do VT100 in its windows?

In short, no. But why would you want to? GenevaTOS is designed for running TOS programs, which, if they're ST specific, will use VT52 codes, or, if they're ports of UNIX software, usually use TERMCAP, which means you don't need to worry about what sort of terminal you're on. Just make sure you have your TERM env. variable set correctly.

The only situation I can think of where one might want GenevaTOS to do VT100 is if one were hooked up with SLIP or PPP and were telnetting to a remote machine which expected the terminal to be able to do VT100. Running Pine on a remote machine is an example.

GDOS fonts are the same regardless of which printer, what you want is the drivers for a HP Deskjet which Migraph sells a commerical package of the printer drivers. Not sure of the current cost. Or you could upgrade and get Speedos which has Deskjet drivers in it.

MultiTOS is a subsequent version of TOS. It has one thing that the Mac
doesn't have yet: fully pre-emptive multitasking. Most of the other alternatives
have as well.

Not all platforms are locked into a single operating system by the computer's
manufacturer...

: have you?

Yes. Several times. It is absolutely impossible to get down to a low-level
architecture without having programs that work differently on different
machines. That means that you either have thousands of
#if defined (_AIX) and defined (_BSD_SOURCE)

blah
#else if defined (_POSIX_SOURCE)
blah2

#else .....

or you have one #ifdef with blah being defined seperately for each type.
Really, if you've compiled as much as your arrogance appears to imply
you ought to -know- that that makes a program -much- easier to
understand, modify and debug.

: |> I can't say I've ever come across the problem. If you use a decent
: |> editor it shouldn't happen.

: The word 'naive' lacks sufficient force :-)

Oh right, so I'm naive because I don't happen to do the same stupid things
that you do?

I'd say that your naivety is greater because you believe that things like
#define shouldn't exist because they are impure. While I agree in principle
because they're not particularly nice language constructs (see
Stroustroup etc) I am a realist and in the -real- world these things
actually -help- with code readability.

Mumble mumble "naive" mumble mumfle bloody university employees mumble mumble
real world mumble mumble...

IN>II. 9600 baud works fine, but nothing higher.

Try STarCall, IMHO it's the best comm program there is and still being
develloped/ updated *very* often. It's now at version 2.1 in German,
but there should be an English version too. There's a ftp-site in
Australia that has the English version. Don't know the URL, though...
Just found it:-) ftp.iinet.net.au in /pub/atari/comm.
The file is starc*.lzh if i'm not mistaking. It also includes HSMOD,
probably with installation program (2.1 has one at least). It works
for me!

Hi There :)

I seem to remember seeing a post recently from someone having problems with
Bang and Blast Man not recognising the joystick firebutton or any keys on
the title screen which means you can't start the game.
I think they were using an STe with TOS 2.05 (or was it 2.06 ?).

I've got the same problem on my Falcon (TOS 4.04), I've tried Stosfix 3 and
the Generic Stos Fixer, but to no avail :((

I didn't see any reply to the original post so I'm posting this in case anyone
knows the solution.

If you do, please get in touch or post here. Many thanks :))

A needy 030er.

Cross-posted to: alt.atari-jaguar.discussion,comp.sys.atari.st,mi.wanted,misc.forsale.computers.monitors,rec.games.video.atari,rec.games.video.marketplace,rec.music.makers.marketplace

Hi there. I have two of the Atari SC1224 monitors for sale. These are refurbished units straight from Atari. I have not had a chance to test them as I do not have anything that can connect to them (I bought them under the impression that they had composite video inputs, which they do not). Anyway, they are RGB monitors, capable of plugging straight into a ST, or into a Jaguar using a Catbox. I don't know if they will work with anything else. I am asking for US$40 for each monitor, which includes shipping within the US and Canada. It would probably be rather expensive to ship these things overseas, but I will if you want one.

Please respond to megular@grfn.org, and CC: a copy of your message to ad503@detroit.freenet.org.

Thanks,
Edward Barrett

Marketing people? I decided I needed 16 megs ram. Considering my 16 meg ram and system cost less than a new Atari ST system, I don't see it as a issue. Increase in speed, operational capacity and reliability doesn't exist on this platform. Has been exceeded by more bang for the buck on the other platforms..$1300 for an 030 box in 1996, please!

Just shows you ignorance..You need to visit the PC stores for a change to get you upto speed. AppleScript has no peers on the ST platform.

Hi all!!

I am having problems getting notator 3.1 to work well with a canon
bj200ex printer

I am using the bj10 drivers but it's printing smaller than usual

anyone have any ideas??

Hi! After I formatted my Hard Disk, it stops after one minute I
don't use it. I keep looking the root directory but I just run out of clues
on which one might be the file (or config) that avoids this. Before the
formatting the small internal IDE didn't have this "behaviour". This bugs
me to death. Any solutions over there?

Regards!!

After trying to get Stik and Cab to work..., noluck, and Oasis..., once again no luck, I wonder is there some software that a novice like me can get to work.

Stik gets stuck at the name prompt now. Before I got as far as "Your Address Is" but now it sticks at the name. Oasis seems to logon but I can't get it to do anything at all. When I try to check out the web it say "Spider not Available" or something like that. Does this mean I can't surf the World Wide Web with Oasis?

My Stik set up is:

```
FIND = Username:
RESP = <Username>@slip
WAIT = 5

FIND = Password:
RESP = <password>
WAIT = 5

FIND = to
RESP = $Get_IP Address
```

Oasis... pritty much the same... just easier to set up. Can Cab work with Oasis? Is there any other programs easier to work with? Please don't say Mint or MintNet. That looks like I have to learn how to setup a whole network. Man!!! Anyway thanx for any help anyone can provide.

Hi there,
What hard disk driver software do you use?
Some have a power-save function built into the driver.

Best regards,

In this case, I'm sure things would be close. I was just saying that their comparison was stretching the point a little. If they'd claimed that 16 Mhz ST was as fast as a 386-25 or 33, THAT I might have believed. Sure, my ST has faster screen update speed than my dx2-66 in windows. What's the ST screen size? 32K? And 1280x1024x256 = 2 MEG. Not that surprising that the ST can move 32K faster than my dx2-66 can move 2 MEG over an 8 Mhz bus!

> simply stunning.

O.K, here are some timing measurents I did on my ST last night. Using my favourite text editor (MicroEMACS), I replaced all spaces in a large (5000 line) text file with another character. Times were as follows:

8MHz (no cache) 61 seconds
16MHz (no cache) 59 seconds
16MHz (with cache) 33 seconds

This is an operation that benefits greatly from a cache, hence the last time approaches the theoretical maximum. As I said, the performance gain without a cache is barely noticeable.

Now I don't say that you can't come up with an example that performs better for the second case - anything that does a lot of multiplication and division is likely to show a bigger performance boost, but the above figure is very representative for the range of tasks I use my ST for.

Martin

(Incidentally, the same operation undertaken on my machine at work - a Sun SPARCstation 10 - took 40 seconds. So much for 10 years of processor development!)

From: johnzo@bnr.ca
Message-ID: <4qpl2r$nl1@bcarh8ab.bnr.ca>
Source record: 142766

Hi, all.

I've got all kinds of nifty old stuff for my 520STFM, but my monochrome monitor has packed it in. I'd like to use the SVGA monitor that I've got sitting on my desk. Is this feasible? Is it just as simple as mapping the 11-pin Atari cable (ugh) to a the SVGA cable?

I know that the ST uses an intelligent monitor port to decided whether to boot up in high res or low res. How does this port work? How many hoops will I have to jump through to get all three resolutions working on my monitor?

Johnzo.
onetime Atari lover.

(of course, I could find a used Atari monitor for cheap, but desk space is a consideration. If you're in the Ottawa area and you want to sell one, let me know.)

Hi Diane,

I own the program and like it's flexibility, though some of the functions are accessed somewhat awkwardly. I did use it enough so that it seemed second nature to me.... I've moved on to CAF, but don't want to lose my 'OMEGA-bility'. The GOOD news is that Toad Computers sells it for about $59, ...I think. You can web over to them at //www.toad.net , and can even order on-line. ......if you want full functionality and ease of use, I hope you have 4 Meg of memory. ...Though it's QUITE useable with even only one meg.

Regards,
MarkR

Codemasters produced a Delux Fruit Machine Simulator as a budget title.
This was a few years back but was quite a true representation of the
four wheeled 'Club' fruit machines you get nowadays.

Try second hand dealers if you want to buy a copy (I got mine for 1 quid)

Of course, you could try the Public Domain...there's loads in there ;)

Wrong.

Gemini currently is at release 1.A. While both of the original authors
indeed have bought a PC, it's premature to say that Stefan Eissing
has 'abendoned' the Atari platform.

Fact is, that neither Gemini nor Mupfel have been 'frozen', as I am
working on them whenever I have the time. Check the latest Mupfel beta
version at http://wwwmath.uni-muenster.de/~reschke, just three days old.

>There is a successor for Gemini, called Thing. You can find it on Hensa,
>and probably other ftp archives too.

It's not a successor. In fact, it even doesn't have a shell :-) However,
the author of Thing *indeed* has moved to the PC platform, handing over
maintenance to others. Exactly as it happened with Gemini.

Well, I've gotten STiK to work, it connects with my provider and tells me
that I'm connected as its last message...However NONE of the other progs.
included in the Internet pack will work for me. IRC always returns a msg.
that says TCP received EOF from remote...Forecast tries for awhile then
says "Bad Connection Handle"...CAB will resolve to a host, connect then
the dialog with bytes counter comes up but always stays at zero, then it
finally shows a blank screen. Any ideas?

Just for the record:

My Internet provider says I have "true" slip and not cslip.

I've copied CAB.OVL into the CAB folder...

I increased the ALLOCMEM...

CAB loads and displays the home page just fine...

I'm using a Supra 28800 modem at 57600, with HSmodem 6, FPatch2...etc,...

I got on using a T1 link form work - but the response on Telnet is always slow, and it acted like a 2400 bps link. I did manage to logon, but there wasn't time for anything else.

j> on the main board?
j>
j> It *is* an old machine, but it's handy for word processing.

It's either a bad drive (most likely) or a controller suffering from "chip creep" (next most likely) or a bad cable or chip.

You can use almost any PC drive, either 720k or 1.44 - just be sure it can be physically switched to be ID 1 (they come set up as ID 0 for the PC) and is NOT designed for the IBM PS/2 series (those have no seperate power leads).

If it's chip creep, you can just push down on the chip gently but firmly unitl it "seats" in its socket.

Bad cables require soldering and will be a PITA. A bad chip, if you're lucky, will be socketed and easy to replace.

If you have an external "B:" drive, you can find out if the chip is good, at least.

Good luck!

I have been doing the same as you without any problems now. In fact I have been transfering archive (ZIP & LZH) between my ST, Falcon & 486.

>correctly on my STe fail CRC checks when I try to unzip them on the
>Falcon. Why? This happens with STZIP 2.4 and 2.6. Has anyone else
>experienced this kind of problem?

In an early stage, and that's with my 486, I found that the diskette I used seems to be giving some trouble. I used the falcon to format diskette to MS Dog standard. The 486 can read/write to the diskette, but sometimes the Atari get CRC error in reading them. It is also true for the other way round ie Atari write, IBM read --> CRC error. It turns out that you have to cater for MS Dog, so formating in MS Dog was the solution. Somehow the Falcon MS Dog format don't always work.

I am not sure how this will help you, but you can try formatting a low density diskette on one of your machine & test out which works for you.

HTH.

Actually nAES is a layer over the VDI. NVDI is a layer under the AES and over GEMDOS. That's a nice bit about the architecture of TOS. Properly code to the API spec and you can transparently replace any level at will.

MagiC and Geneva replace all 5 levels.

Your clueless mind is thinking of NeoDesk...

: a P90! I think the 8 MHz 68k was listed at 1 MIP. That would make the 16
: MHz 2 MIPs. A P90 is running what - conservative guess of 30 MIPs. That's 15
: times faster. That's a BIG difference. Heck, I'm sure that if you ran Linux
: on a Cattamaran TT vs. a PPro 200 (or even a P150), there's no question which
: chip is faster. I suggest Linux because I'm hoping that the code is somewhat
: similar. Comparing Word 6 to Word Writer ST is a little silly..

Toad also carries the Medusa T60 (w/68060), a 100mips TOS compatible. A
much more equivalent comparison to current Pentium models. Of course, the
biggest difference between TOS and PCs is still in the OS - where Windows
effectively reduces performance as much as possible so as to ensure that
nobody is really satisfied.
It would be interesting; however, to compare the performance of
equivalent OS's such as Linux on a 66mhz 68060 vs. a 133mhz Pentium. I
think that I would put my money on the Medusa.

: About the only good reason for having VT-100 support in GNVA_TOS would be
: for use as a terminal. Due to the large number of terminal programs out
: there for the Atari, both commercial and otherwise, it doesn't make too
: much sense to add it.

If you are running MiNT/MultiTOS, there is a version of Toswin that supports
VT100 escape sequences. It's not quite 100% but is fairly close (one day,
I'll find time to fix it ...). Source is at :

ftp://aire.ncl.ac.uk:21/pub/Atari/Sources/tw100-0.9.tar.gz
http://aire.ncl.ac.uk:21/Atari/Sources/tw100-0.9.tar.gz

Binary (68030) is at :

ftp://aire.ncl.ac.uk:21/pub/Atari/Binaries/tw100-0.9-bin.tar.gz
http://aire.ncl.ac.uk:21/Atari/Binaries/tw100-0.9-bin.tar.gz

I added the VT100 support because I was indeed using it as a terminal to
a *nix machine (using MintNET).

: Zan

I translated the MagiC 5.0 part so far. (Been too busy for the rest)

Here:

ASH-MagiC 5.0 for Atari

MagiC 5.0 brings long filenames to the Atari! You have probably been
frequently irritated by the limitations that using the so-called 8+3
format causes. A meaningful description of the file is often not
possible. MagiC 5.0 removes this limitation elegantly. The most
important point: it is not necessary to reformat your hard drive.

Built into MagiC 5.0 is the Windows 95 compatible VFAT filesystem which
has the benefit that MagiC 5.0 for the Atari and MagiC-Mac 2.0 each may
access Windows 95 disks directly (MagiC-PC could this this already).
In addition, you can switch any partitions on your Atari hard drive(s)
to the longer filename format. Packaged with MagiC 5.0 is a little
program that allows you to activate and deactivate the long filenames
at any time. The advantage to this is the backwards compatibility:
under TOS you can still access your files. The long filenames are
merely shortened at the right length.

The following programs in the ASH-Office series already support long
filenames: Texel, ArtWorx, Phoenix (from version 4.2). More will follow.

Other highlights of MagiC 5.0 (joined together in a shortened format):
the number of simultaneous processes have been increased from a maximum of
20 processes to a maximum of 126. MagiC 5.0 supports Threads and Signals,
allowing the system to run faster when possible.

There. That should help you guys, I hope. I may finish the MagiC HTML
file, or I may do the Ease 5 part of the other HTML file. Any opinions?

Gemini has been frozen at version 1.99. There won't be a new release,
because the authors have abandoned the Atari platform and bought a PC.

There is a successor for Gemini, called Thing. You can find it on Hensa,
and probably other ftp archives too.

>
> FIND = to
> RESP = $Get_IP Address

The 'Address' is not only obsolete, it probably also confuses STiK. Just
write

RESP = $GET_IP

Capital letters ! Add a

WAIT = 0

line if you wanna do it properly.

I cannot tell more without seeing a login log.

Cheers Peter

I've been using the GCR for years with ICD's software, first with the
stock software that came with my ICD host adapter, and now with the
Pro Utilities. I can tell you from experience, GCR runs fine using ICD's
software, although I can't speak for using ICD with a non-ICD host adapter...

CAB is independent of the protocol you use for the connection.
For PPP you have to setup MiNT/MiNTnet, and use cab_for_mintnet,
STiK cannot be used (later versions will be capable of PPP, though).

>and system cost less than a new Atari ST system, I don't see it as a issue.

Until March of this year, a new Atari ST system cost half as much as
16 Megs of RAM. Despite your protestations to the otherwise, this is
undeniable fact. It is highly unlikely that you actually paid the current
going rate of 7 bux a Meg. However, it is highly likely that whatever you
paid for your system included the usual vendor (Apple included) price
gouging on included ram.

>Increase in speed, operational capacity and reliability doesn't exist on this
>platform. Has been exceeded by more bang for the buck on the other
>platforms..$1300 for an 030 box in 1996, please!

The only catch with this is that bang-for-the buck has been muddled by bloat.

An ancient ST can end up being more useful than a newer, more expensive
machine due to usablility.

Although it is true that if you throw at a Mac, 4 times the memory an ST can
ever concieve of wasting, you will in the end get usability on par with an ST.
The same holds true for clones.

[jedi deleted this]

It's part of what makes up the C language. It's not part of the
language structure of C, in that you can use preprocessor
directives completely orthogonally to the syntax of the
language.

>Seems to be a broken drive.

It is not at all uncommon for the MMU and GLUE chips to become loose in
their sockets on the older machines, and this is one of the symptoms
(drive problems...) If this is in fact the problem, you can resolve it
yourself by lightly polishing the chip and socket pins and then reseating
the chips. Atari made a set of clips for holding these chips in place, I
think you can get these from Best.

OVer time, the repeated thermal expansion/contraction of the motherboard
makes these square chips literally walk out of their sockets. While you're
in there, lightly press on _ALL_ the socketed chips, it never hurts to make
sure they're all seated properly.

And, of course, if you don't use a grounding strap, don't blame me if you
kill something...

As long as we're beating on poor Peter, you might ask why he continues to ignore the often-posted fact that I
/work/ in a PC lab, at the world's leading chipmaker... There are subjects on which I remain ignorant, but the
networking capabilities of current PC hardware is NOT one of them. Script files are another area where I feel
competent to claim expertise; I can guarantee I've had more experience with different scripting languages than
Peter has with optimized operating systems. Of course, on that basis, my 4-year-old could make the same claim...

The only person who is lying is you, since you are obviously making false claims
about STonX, because you still can't cope with the fact that people can
get an ST emulator for free now (including source code), and they can
get a modern multitasking operating system with an emulator (MagiCPC) for
a similar price as Gemulator. You're always trying to make a very bad
impression Darek, and your credibility is getting worse with every single
one of these rant postings. Also, please stop calling competing products
"cheap rip offs" of your emulator. They may be cheaper, but definitely
not rip offs. Some people are actually working on improving their products
(free or not) instead of trying to market them with silly lies about the
competition.

I just recently bought the Type 1 and True Type Converter and it does a decent job of converting those fonts to the .ECF format, which another program called Fontverter will convert to Calamus or Pagestream formats.

I mention this because I seem to remember someone asking about upgrades to the program. I guess it's been updated.

Take a look at the International Obfuscated C Code Contest. It typically has
categories for worst abuse of the C preprocessor and best one liner. The main
site can be found at:

http://reality.sgi.com/csp/ioccc/index.html

James

```
l,c,k=16;main(y,v,x)char**v;{x=atoi(*++v);for(;k--;l=l*4|x>>30&3,x*=4,y=(c+=c)
*2,l>y&&(c++,l-=y+1));printf("%d\n",c);} /* "./a.out NUM" Haldane & Rince */
```

Fewer bugs, nice atari logo. There is a really ugly high res bug in 2.05,
described in a file available from the directory I mention below.

> Also: Are there any handy programs that I really should use?

Check out the Ste/Mega directory on atari.archive.umich.edu. There is
some cool stuff in there.

Try Gemview. I don't know, if there is a module for pict files, but it
is possible.

The Test Version of Gemview should be enough to find out, if there is a
module for this in the distribution. It will load the modules the first
30 days after installation.

First, John, the monitor must be able to sync down to 15.75 kHz horizontal if you wish to use it in low- or medium-rez. If it's a "modern" monityor, it can't sync below about 31 kHz; in that case, you can use it in mono but not in color.

The monitor port has a "mono detect" pin (#4) which should be conected through a small resistor to ground (pin 13) as I recall (or possibly it's pin 3), in order for the system to recognize a high-rez monitor. Pin 11 is the mono video signal. Pin 9 is Hsync and 12 is Vsync - that is all the pins you need connected (including ground) for a mono monitor.

It seems that the power supply in my MegaFile 20 is starting to die!
The power supply board seems to be the problem! If I lift up on 1 corner
the power will come back on! I looked to see if the solder connections
were loose or looking like there might be a bad connection but I didn't
see anything really wrong with it!

Any suggestions?
Or where can I get a new power supply that will fit into my MegaFile 20 case?
I could buy a cheap 520 st or something like that and rip the power
supply out of there and put it into my MegaFile! But that is getting a
little bit outrageous! :-/

Or is this just a gerneric power supply and I can get it at any Radio Shack!
(WishFul Thinking eh')

Please help me as my h/d drive power is on/off/on/off/on/off.... during
my work sessions! And I'm scared that soon I will lose something on the
h/d!

Thanks

John

5265. Monitor -> TV socket conversion/confusion

Newsgroup: comp.sys.atari.st
Date: 1996-06-26 00:00:00 UTC
From: Andrew Thackrah <at@roe.ac.uk>
Message-ID: <Pine.OSF.3.91.960626122514.27381A-100000@eigg.roe.ac.uk>
Source record: 142800

Whilst browsing the FutureNet ST Format pages I found a tutorial on adding an extra video socket: the deal seems to be that a wire is connected to the video pin of the monitor socket and another to ground and these are connected to an external phono? plug.

Am I right in thinking that the point of the exercise is to use the new socket to enable use of a TV?

I'm confused because my ST is an original model STf model with no RF modulator. I've been planning to add one and looking at the pins, the monitor says 'composite video (if available)' whereas the TV socket (in the manual) is labled 'RF modulated video'

so firstly: does this mean that the additional plug added in the tutorial will not run a TV?

secondly: why does the manual say 'if available' re. composite video? Will i find that my superduper TOS1.0 machine has no signal to fiddle with anyway?

thirdly: will UK channel 5 bugger-up any attempts to add a modulator??

thanks,

Andrew.

In a previous article, geoffw@jumper.mcc.ac.uk (Geoff) says:

>Nick Maclaren (nmm1@cus.cam.ac.uk) wrote:
>: In article <4qrrk2$rka@yama.mcc.ac.uk>, Geoff <geoffw@jumper.mcc.ac.uk> wrote:
I, for one, find this thread sort of silly, reminding me of
the ancient talmudic rabbis who debated hotly how many angels could dance
on the head of a pin. When Fortran was developed, it was condisdered a
major advance over "writing" a program with patch-cords on a matrix board.
But in those days, when million dollar computers had less power than
many personal computers these days, it sort of grew like topsy, and each
computer, and often each model of some computers had its own little
variations to make use of some particularly wonderful innovation on
that particular piece of hdwe.
Regardless of all other questions, Algol was different, because the
group that designed (or defined) it,sat down to produce a compiler that
was independent of the platform. Of course, nobody listened to that criterion
and soon there were Algols for each machine.
What remained inviolate, however, was literature Algol, in which
programs could be written and published that EVERYONE could understand what
they meant. [One often couldn't really RUN such a program in a real computer
without diddling it a little, but that's another story.]
Pascal was another attempt at a theoretical language, and it too
underwent questionable metamorphoses.
C was a piece of *C*rap, written for a nutty system that for some
reason, still unclear to me, poeple seemed to like for its power and
flexibility, even tho it was totally unreadable and unintelligible.
And even tho a standard somewhere, NOBODY seems to follow it.
Case in point: I am trying to recompile Kermit, to bring it up to
date with the latest official version. (It's two MAJOR revisions out)
I tried HSC, and it choked, and gave up the ghost when some .h files
weren't in its include libraries. I tried Sozobon 2, and SozobonX,
and they didn't understand the Makefile. So it seems that the Atari version
was compiled with Mark Williams C, which doesn't exist anymore.
So I got a copy of MWC from a very kind soul, and its version is
different from the MWC in which it was originally done, So it doesn't
understand all that came before. :-(((
My point is, if anyone cares, that this whole discussion of
which language is "Purer" than the others is a trivial piece of SHIT.
IMHO it's irrelevant, since none of the implementations retains this virginal
purity, anyway. A language is supposed to be functional, or it's worthless.

>[snip]
>: >Why? What makes something that uses #defines any less pure? It is defined
>: >as part of the language, writing C without it would become onerous and

I don't know if you got me right, you have long file names on the Atari,
that's an advantage, even if many might not like the way it's done

Daniel

: leslieh@valis.worldgate.com wrote:
: > There. That should help you guys, I hope. I may finish the MagiC HTML
: > file, or I may do the Ease 5 part of the other HTML file. Any opinions?

: For my money, the Magic 5 part is more important.

Actually, that is all there is about MagiC 5. The rest of the MagiC HTML file is about MagiCMac and MagiCPC. However, here's the EASE 5 part of the HTML file:

ASH EASE 5.0

EASE is now up to version 5.0, and with this new version, we can at last use long filenames in a regular TOS environment!

This is, however, only of particular advantage to users of MagiC 5.0, MagiC-Mac and MagiC-PC.

The report options for a directory window can now be configured without having to detour over the menubar.

With the so-called Autolocator function, you can type in the initial letters of a file in a directory window, and choose a file in a more convenient manner.

An additional little program included allows you to generate program and file groups so that you will have the most frequently used programs and documents at hand. The groups can be put on the desktop as icons, and therefore ready for use at any time.

Finding files using the extended search function is now child's play. All found files are now listed in a separate window.

Additional accessories may now be installed after MagiC simply by double clicking on them.

There's the HTML file part of EASE 5 in english for you guys. Enjoy.

I'm sticking my STE into a full tower case, and therefore would like to have an IBM keyboard to use with the Atari as opposed to the shitty one that Atari provides with it.... (soft touch doesn't type fast enough for me)..... I heard that there was a hardware thingie to plug on the mother board, if this is correct, where can I get one from. Or can I just do a bit of soldering to put the new keyboard on.

From: clifton@southern.co.nz
Message-ID: <4qtgio$i0k@orm.southern.co.nz>
Source record: 142614

But isn't the whole thread a waste of space?
Especially if I quote heaps of text like this:

: >Believe it or not, you are not the only one posting messages on the net.
No kidding.

: >Ok, let's forget the time, for now, and talk about the wasted storage space.
: >How many messages are posted, daily, on the net? Let's say there are 2,000
: >news groups(I think there are more). Let's say there are 2,000 news sites,
: >world wide(maybe more, maybe less).
:
: I think 13500 is a better estimate.
The number of groups at my site (there are definatelu more) is just over 6000

: >Let's say each group gets 5 new messages
: >daily(I'm pretty sure most get many times that).
Maybe on average... cos there are a lot of unused groups.

: Try 150 as a good average
Probly closer to 50 but anyhowway

: >OK, 120 wasted characters
: >per message. That's 2 bytes per character, times, 120 characters, times,
Only if the .sig is 2 lines long

: Last time I checked 1byte/char
Unless it's an IBM, then god knows how many bytes = a character :)

: >2,000 newsgroups, times, 2,000 sites, times, 5 messages. That's 2.4 giga
: >bytes daily, times, 30 days per month, DO the math. That's a fairly
: >substantial WASTE of bandwith.
BUT.... not everyone uses all the groups and if it is 5 gigs or whatever,
most links can handle a message every second as they are fast.

: 13500*120*150 = 243 MegaBytes / day for each site
So what are 2Megabit links for? Just sitting doing nothing.

: So what ??? well I'll tell you what.... 243Meg is 'insignificant' it
: hardly uses up any bandwidth, espicially if you start to include
: IRC,WWW,FTP and email. When you take these into consideration the
: ammount of bandwidth wasted by emails is so insignificant that we have
: probably generated more bandwidth in this discussion that sigs do in a
: whole year ! :)
I agree there: this is a waste of bandwidth, so is IRC, so is WWW, so is
FTP, but the reason to have bandwidth is not because it sounds
impressive, it's so that we can use it.

And it certainly is more than 120 bytes for a .SIG like mine:

```

Background DMA is definitely A Good Thing (tm), but having a Minix
filesystem without support for background DMA would still be better
than having no Minix filesystem. I don't think this is the real
reason why there is no Minix filesystem for MagiC. It's more because
the filesystem interfaces in MagiC and MiNT differ too much so that
a port isn't trivial.

Yes: HDX 8-) I guess HDX just doesn't grok your Quantum drive.
Use a different formatter. Oh, and by the way: Why would you
want to *format* the drive - you don't have to do that to install
a driver or to partition the drive.

> I suspected a jumper named SS (spindle sync) but it has nothing to do
> with the problem. Perhaps another jumper? (there are also jumpers
> C0, C1, P0), or whatever?

Common jumper-related problems are parity, reset-messages from the drive,
or arbitration. Since you can read and write, parity seems to be
configured just fine, and this probably also rules out problems with
arbitration. Reset messages are only harmful if you want
to boot from this drive, they don't keep you from formatting.

Source record: 142618

Well, after six monthes of absense I've returned to
comp.sys.atari.st......

Have I missed anything?

If not, here's what should be coming real soon.....

I'm about to release a new version of XaAES, with loads of bug fixes,
more pace, more features......here's a few:

o Compatibility goes right up, with EGEM apps working now.
o New object types to do scolling lists.
o Mucho fixed redraws.
o Win95 style click/hold/select-on-release menus
o One version to do all colour modes from mono to 256.
o Widgets are in a resource file, so you can change them even
if you aren't a programmer.
o Direct access to the /dev/moose means that the mouse server
is no longer used (gives better click/double click response as
well).

Lot's of other stuff as well, but I'll post the full list at the
weekend.

Craig.

I've got no idea, and I do not think anyone could estimate it accurately now. That is because a major rewrite of STiK is going on these days in orders to improve flexibility (that is, for instance, to make it cope with other protocols).

Cheers Peter

Try to draw a Syntax diagram for C including the preprocessor or try
to write a combined preprocessor/C-compiler in yacc. Despite the fact,
that yacc can only parse LR1 grammars, I bet, this cannot be done.

SO my concusion is, that either C is almost uncompilable or the
preprocessor is not part of the LANGUAGE. Ihe princliple behind is,
that if it has no grammar, it cannot be a language.

Which home page are you talking about ?? Is that a home page coming
across the internet connection (In that case check the NAMESERVER entry
in DEFAULT.CFG, it must be the four-number-address of a nameserver that
is recommended by your provider) ? Or is it the example html file that
comes with CAB ?

Cheers Peter

m> So far, I wrote to him about this product and ask if we'll ever get any
m> MIDI support. No reply. Now will someone tell me how MagicPC really
m> works, or give me their web site. Thanx...

I was among the first to register Xformer with the cable many years ago, and
I find it difficult to get information, much less support, for the product.

MagicPC is useful. It's dog-slow on a 486DX2/66, but it's no worse than
WIN3.x on any 386, and it's a LOT prettier. I have been using the demo on
and off at work for a couple of weeks now - anything that will fit onto a
1.44 floppy can be imported, so I installed Freedom file slector (also Demo
version) and a few other items. That "Hi, have fun with our MagicPC Demo"
popup every minute or so (it's supposed to be 2 minutes, but that was NEVER 2
minutes!) is annoying, but I think it's supposed to be.

MagicPC works. Run it on a Pentium/133 or faster and it will be quite as
nice as a Falcon, I think.

d> corner the power will come back on! I looked to see if the solder
d> connections were loose or looking like there might be a bad connection
d> but I didn't see anything really wrong with it!
d>
d> Any suggestions?

Grab a screwdriver and a soldering iron, remove the PS and turn the board upside-down. Reflow all the solder joints. If the traces are solder-covered, reflow all the traces, too. It sounds as if one of the joints has gone bad, or possibly you've developed a hairline crack in a trace.

Don't forget to reflow the solder where the wires join the board, too.

Good luck! If that fails, yes, get a 520STf and rob it of its PS.

j> So, the good news is I was finally able to subscribe to this site.
j> The bad news is I still can't make use of it since CAB doesn't support
j> authentication. Perhaps it will in the next release?

I haven't tried this myself yet with CAB (it works with Netscape), but you
can force authentication with any browser by adding your username in the URL;
hopefully CAB would then ask for a password when it connects to the site. The
bookmark URL should look something like:

http://jtrautschold@www.military.secrets.of.destroying.the.Earth.com/

Yesterday I posted that I had been discouraged by the lack of response
to my email to Nima Montaser of Homa Systems House. In case I conveyed
a negative impression of Homa Systems House, I apologize. I just
received a nice email from Nima apologizing for the problem and
explaining that his ISP had had problems with email, causing the delay.
He went on to answer all of the questions in my original email. So
please forget about what I said, and again I apologize if my post
caused anybody to get a negative impression of Homa Systems House.

Please see the retraction I have just posted. However, I would like to point out that I did not make the mistake you are suggesting - there were no significant active processes on the Sun when I did my test, so MicroEMACS was getting about 98% of available CPU time. I did make an effort to do a fair comparison - even if I did get caught out by a silly mistake.

From: mvogel@coli.uni-sb.de
Message-ID: <4que2s$hvv@coli-gate.coli.uni-sb.de>
Source record: 142632

Hi,

would someone give me a useful hint as to creating a file or a disk image?
I installed stonx on a sparc, I get the main stonx window, but nothing else
happens. As far as I understand, programs can only be loaded as an image.
So, how to create a file image on my 520 ST+ (tos 1.0)?
I do not speak of a tos image, which is needed for stonx! I was able to create
it with a program called "tosdump". But I refer to creating images of all kinds
of files, i.e. executable programs.
Are there any programs to create disk or file images? Where could I get them?

Many thanks
Manfred

> development!)
>
Major embarassment time! Please disregard the last comment. I was sufficiently surprised at the comparison that I looked into it a bit further. Although I had been careful to use the same editor (MicroEMACS) on the same file (the MicroEMACS manual), I had accidentally used an earlier version of MicroEMACS on the ST. The newer version has an undo facility, which has a major impact on performance - the above operation took 7-8 minutes when using the newer version on the ST.

However, this error highlights the care you need to take when making comparisons between different machines. The reason why a Mega STe still compares favourably to a low end PC, as commented on by others in this thread, is purely down to software efficiency. The availability of faster processors has simply allowed software packages to become more bloated, and software writers to become more lazy. I have a personal view that no software developer (including myself!) should be allowed a machine that is less than two years old, which would do a lot to combat this effect.

> Why? What makes something that uses #defines any less pure?

The syntax for C is defined with respect to the output of the
pre-processor. In other words the preprocessor directives are
not a part of the syntax of the language. There is a clear
split between preprocessing and parsing.

> You might as well say that in fact the output of the C
> compiler is pure C -- ie the assembly language.

No it's not. You can write code which could be fed through the
following two paths:

code -> C preprocessor -> C compiler -> object file
code -> C compiler -> object file

and have the same object file, whereas

object file -> C compiler -> object file

is likely to break.

> Most of the basic principles of the compiler (apart from
> optimisation) are to do with simple substitution and table
> lookup anyway, which is pretty much what a preprocessor does.

Ooo! Gross oversimplification alert! The grammar of the parts
of the language not related to the preprocessor is much more
complex than what the preprocessor has to deal with.

Have you ever written a language parser?

>
>Robert Wills asked:
>
>> Have I overlooked anything?
>
>Yeah. You forgot OIDS, the best darn joystick jiggler ever produced.

Oids was very good, especially the level editor. Had hours of fun with that.

Dungeon Master (another FTL game) probably has the best `have-another-
go-at-killing-the-purple-worms' factor of any game.

But the best ever, completely unsurpassed game on the ST was Cybercon III.
An amazing 3D exploration and shoot-the-baddies game, much better than Doom.
A pity that the ST was not quite up to it, as it could be aggravatingly
slow sometimes. But a great game, and tremendously challenging.
So challenging, in fact, that I never managed to complete it. Never
did get the green triangle key codes. Damn.

A couple of favourite non-games:
Degas Elite was a nice art package, with better features than most,
and Cad 3D was wonderful for a quick play-around. (Or rather, a slow
play-around.)

Hi guys!
We all have to keep intouch! And what better way to do it.. IRC!
There is a really active Atari channel on glass.dal.net
So go there and hang out and lets make this the Atari home base!
There is usually always someone there!

Here is some instructions to get there if you don't know how!

1. Goto your IRC Prg. In Unix Shell type "IRC"
2. When at the IRC prompt type "/server glass.dal.net"
3. Then when you are connected to glass.dal.net type "/join #atari"
And we will be there waiting!!

Hope to see ya there!

John

Thanks for the respons. I hope now that I'm free that weekend.
Right you are about the flat beer and the breakfast but the "big nasty
place" has damned good Italian, Chinese and Indian restaurants.
According to my wife it's a good place to do shopping and above all
for us Belgian people it's relative cheap. I remember me the days that
I'd to pay for 1 pound 75 Belgian francs. Now for the same pound I pay
49 -50 bfr.

Wrong religion. At least I have, seen such discussions in Christian

Boris D. Cahan (bdc2@po.CWRU.Edu) wrote:

: In a previous article, geoffw@jumper.mcc.ac.uk (Geoff) says:
[...]
: C was a piece of *C*rap, written for a nutty system that for some
: reason, still unclear to me, poeple seemed to like for its power and
: flexibility, even tho it was totally unreadable and unintelligible.

Interesting view, but I think you haven't realized it yet, that C is not
a high level programming language like Algol. C is a CPU independed
macroassembler, mostly used to port an operating system written in it to
any hardware platform, without the need to rewrite it for all the
different existing CPU's. This piece of *C*rap does this job very well
obviously, while high level languages don't do that. So instead of
saying that C is a piece of crap you better would tell people to use
a high level language to write applications and not a macroassembler.
Totally unreadable, hm, from the public available source code base
I've to assume that lots of people are able to read C.

: And even tho a standard somewhere, NOBODY seems to follow it.
: Case in point: I am trying to recompile Kermit, to bring it up to
: date with the latest official version. (It's two MAJOR revisions out)
: I tried HSC, and it choked, and gave up the ghost when some .h files
: weren't in its include libraries.

Some .h files are not a feature of the language. Usually the OS vendor
supports the OS with .h files which fit to the system. Some OS vendors
don't do a great job and just don't do that. So this works needs to be
done by compiler vendors. Because .h files depend on the OS there is no
standard for them and so it comes that you have problems on this OS's
when you use compilers from different vendors. This problem is not
caused by the language.

: I tried Sozobon 2, and SozobonX,
: and they didn't understand the Makefile. So it seems that the Atari version

What has C to do with Makefiles??? Get a working make program for your
machine.

: was compiled with Mark Williams C, which doesn't exist anymore.
: So I got a copy of MWC from a very kind soul, and its version is
: different from the MWC in which it was originally done, So it doesn't
: understand all that came before. :-(((

As a former MWC developer I had access to the compiler sources. I can
tell you that all compiler passes other than the code generator and the

optimizer are build from the same sources for any supported platform.
The differences you found were caused by changes in the OS, not because
the MWC developers suddently made an incompatible new version just for
the fun of it. There is a difference between the language C and the API's
of OS's, in the K&R books it is explained good enough for programmers
I think.

: >[snip]
: >: >Why? What makes something that uses #defines any less pure? It is defined
: >: >as part of the language, writing C without it would become onerous and
: >: >almost impossible in a systems context.
: >: C was invented in the context of the AT&T Unix project, and for a
: >: decade was effectively tied to a single series of compilers (the 'K&R'
: >: ones). In those, the pre-processor was a completely separate program
: >: that produced C as output, and was often used separately from the C
: >: compiler as such. The PC versions of 'C' and, later, ANSI/ISO did not
: >: preserve the difference.
: >
: >Mainly because in order to make C usable it had to have the C preprocessor,
: >and thus it was included as part of the ANSI standard.
: >Name me a C compiler that is supplied without one.

I often use m4 and awk as preprocessor, to build FSM tables which needs to
be the same in more than one program and similar things. This things cannot
be done with cpp because it's not powerfull enough for that. Now I have the
problem that m4 and awk differs between OS's, or on some it's not available
at all. No preprocessors, no C programming, so dear ANSI committee, please
make m4 and awk at least a C language feature, might be sed, lex and yacc
should be included too, NOT.
Well, I don't mean it serious of course, it's just to make you think about
tools which are independend from each other, so that they can be used for
more than just one single thing. I've used cpp e.g. to massage roff manual
pages like:

```
#ifdef _OS_X_
some text for OS X
#else
some text for the other OS's
#endif
```

I can do that because cpp fortunately is an independend program and hasn't
to do anything with C. I don't like development environments a lot, which break
this feature for me.

I'm told that the power supply in the MegaFile is the same as in any
internal powered ST. Toad had a supply of them in unknown condition for
sale really cheap. Otherwise, you might pick up a 1040, or 520STfm, in
which the chips were seriously dead, or like that, and scam the power
supply from it. It's simple, but tricky, to get the ps out. You have to
lift and pull in just the right way.

I finished the MagiC-Mac portion - (for those of you who are po'd that I'm\
putting it out in pieces, this is the last one, and the rest will all come
translated in one file.

MagiC-Mac 2.0

There is also a great deal to report in regards to MagiC-Mac. Reason
enough for a jump of the version number from 1.2.7 to 2.0!

MagiC-Mac 2.0 comprises the operating system kernel of MagiC 5.0, which
allows all extensions of MagiC 5.0 to be made usable under MagiC-Mac
e.g. Windows95 file system on disks, AHDI drives, threads, and signals.

MagiC-Mac 2.0 supports, in addition to the Mac screen resolutions, the
modes ST Low (320x200 with 16 colours) and ST Medium (640x200 with 4
colours). Programs that require these resolutions will now be more
likely to run.

In the same way the ST High emulation (640x400 monochrome) has been
optimised: All three ST resolutions now use PowerMac native routines,
so that the system can now control and adjust the monochrome resolution
via a monitor control field (on all PCI Macs), thereby allowing
essentially fluid operation.

MagiC-Mac is now better integrated with the Mac OS. This connection give several innovations.

You can, using a special dialogue, set what Mac file type shall receive certain MagiC-Mac generated files. So you could set it that the Papillon .TIF file that you saved will appear in the Finder as a Photoshop TIFF file. Then, a double click on this file in the Finder will automatically start Photoshop.

A small yet refined accessory runs in the background that takes care of the communication between MagiC-Mac and the Mac OS. If you double click on an Atari application in the Finder, this application will be started under MagiC-Mac.

Also, system reports of the Macs are now also understood by the called accessory. For example, if a Mac screen returns a screen redraw, MagiC-Mac will also redraw it screen contents.

Owners of the WACOM Artpads with the ADB connectors: the mouse modes can now be switched to "Absolute", making the use of graphic tablets possible.

Often desired, and now carried out: the integration of CD-ROMs have been simplified. Previously, every CD must have been installed as a separate drive, but as of this version, the CD-ROM drive itself can be employed as a MagiC drive. For example, you can set that drive G will always be the current inserted CD. In addition, you can assign a MagiC-Mac drive for the Mac removable drive and detect what format of media is inserted.

Further Innovations: On PowerMacs, virtual memory may now be activated for Mac programs. The archive bits are now supported, as allowed by the Backup programs. On Windows-NT and Novell-Server drives the table contents are now correctly displayed thanks to new switches in the Drives dialogue. The number of partitions reserved for a removable drive is now adjustable. The creation and use of symbols (called on the Mac alias) is now possible on the Macintosh partitions under MagiC-Mac.

There you guys are.

Leslie

Nope. That's direct video out, suitable for connection to a VCR or video monitor's "Video In."

> I'm confused because my ST is an original model STf model with no RF
> modulator. I've been planning to add one and looking at the pins, the
> monitor says 'composite video (if available)' whereas the TV socket (in

> tutorial will not run a TV?

That is indeed what it means.

> secondly: why does the manual say 'if available' re. composite video?
> Will i find that my superduper TOS1.0 machine has no signal to fiddle
> with anyway?

Sadly, yes. You have no composite video. However, mixing the Red, Green, Blue, Hsync, and Vsync together with some resistors _should_ (no guarantees!) create that composite video. I'm not a video expert, but that's the essence of the composite signal.

> thirdly: will UK channel 5 bugger-up any attempts to add a modulator??

That would depend on the frequency of Channel 5 and the desired RF frequency of the modulator.

Look for WWW131.ZIP, which is Internet software that also runs with
little RAM. The ST should have one MB, though. Even 1 MB is a little
tight for the W3 program (CAB), but it should work. But don't expect
miracles ;-)

5318. Re: Problem formatting a QUANTUM 210 MB

Newsgroup: comp.sys.atari.st
Date: 1996-06-27 00:00:00 UTC
From: thopman@uoguelph.ca
Message-ID: <4quvrn$6mh@ccshst05.uoguelph.ca>
Source record: 142656

Roland Prajoux,94,6344 (prajoux@chnou.laas.fr) wrote:
: I recently acquired a used hard disk QUANTUM ProDrive 210S to put INTO
: my MegaSTE.
: I configured it as device 0 and parity disabled.
: Using HDX 5.04 I tried to format it and failed. HDX recognized the disk
: correctly, but refused to format, giving a message like "Can't do
: formatting. Check connections......"
: I was about to give up when I got the idea to try accessing the disk.
: It worked. I could read and write with no problem. So I discovered that
: the disk was divided into 2 AHDI-compatible partitions of 104,472 MB each.
: Then, I tried to re-partition and failed with "This disk was formatted
: using a previous version of HDX. Please reformat." This, I can understand.
I seem to recall having exactly this problem on my TT when trying to
format my Maxtor 340S. I thought the problem was HDX, so I bought the ICD
Pro utils, a good move in any case.
: So, these are my questions:

: (1) Does anyone has an idea of what could prevent that disk to be
: formatted, while allowing to read and write?
: I suspected a jumper named SS (spindle sync) but it has nothing to do
: with the problem. Perhaps another jumper? (there are also jumpers
: C0, C1, P0), or whatever?
Can't help you there...
: (2) I have seen that SCSI terminating resistors are mounted on the disk,
: while there is none on the original 44MB because they seem to be mounted
: directly on the internal adapter of the MegaSTE. Should I remove the
: resistor on the disk, fearing an overload of SCSI lines, i.e. a danger
: of random data corruption?
The prevailing rule for SCSI termination is: If it works, it's right. As
I mentioned, I originally thought that the problem was HDX. It turned out
that ICD's Pro utils didn't solve the problem either. I tried removing
(or replacing (it's been a while)) the terminating resistors, and the
problem solved itself.

>No advantages for Atari users at all, then?

All the new things like threads, signals and long file names are available in the Atari version, too. Threads and signals are rather something for programmers to play with (and hopefully used in future versions of programs for background printing, calculating, formatting, searching ...). On the other hand long file names are a great enhancement for all users since you can eventually name files in an understandable way. Also, exchanging large amounts of data with MS-DOS users is a lot easier with MagiC 5 (and an appropriate hard disk driver) because of MagiC's ability to read DOS partitions >32 MByte.

Message-ID: <835994398_OASIS_@compuserve.com>
Source record: 142664

In article <835705672_OASIS_@flinny.demon.co.uk>
Nick@flinny.demon.co.uk (Nicholas Flintham) said:-

>Naa you can never have enough mod players.. :)
>One which plays s3m's and XM's PROPERLY would be nice.. I think we
>have enough 4 track players though...

There is a new release of Graoumf Tracker at ftp.cnam.fr, version 0.85
that plays S3Ms near perfect, and XMs very very well. Well it's not just a
player but a complete tracker, and the docs are only french, but it's my
favourite. File gtk08500.zip in pub/Atari/Falcon/Music directory.

>So when do we get to see this new language?

As I said to Ken in email, I have submitted two papers on parts of gUd
to two different journals, but don't want to wait until they eventually
emerge from the molasses of the journal-publishing business. At the
University of Southern Queensland, we have (just) started writing an
implementation. The language's strongest feature is total static
type-checking combined with extreme polymorphism. (E.g. I can inherit
from a class that won't even exist till runtime, and yet know at
compile time whether the inheritance is legal. This sounds magic, but
it isn't. The secret is that you must convince the compiler that what
you are doing is OK. In other words, syntactic legality guarantees
runtime type correctness, but syntactic illegality does not necessarily
imply that the program would have failed, had the compiler turned a
blind eye and compiled it anyway.)

5336. Status Of CAB development?

Newsgroup: comp.sys.atari.st
Date: 1996-06-28 00:00:00 UTC
From: bjr@EbiCom.net
Message-ID: <4qvolt$ogm@Einstein.ebicom.net>
Source record: 142671

I've got the www131 package...
It works...
I love it!!!

So far the only problems I'm having with it are (CAB in particular):
1. mailto doesn't want to work.
2. will not load news groups (is this supported yet? it has an nntp
paramater)
3. ftp doesn't work (once again...there is a place for the proxy)

Other than the above..CAB works perfectly on my system...
http is relatively quick and reliable.

What is the latest version of Telnet for stik?
1.00 works..but it's so slow it hurts(I'm talking minutes to draw
the screen for pine...several seconds to enter a character)...and it
puts garbage on the first login request.

Finger doesn't work at all for me, but this is trivial to me.

Ant Mail is great...I've not had a single problem with it so far.
I'd like to see it support pop send-mail in addition to smtp.
Didn't it do this in one of the earlier versions?
Mainly because some people only have a pop mail account, and no smtp
option (yes this is rare...but it happens...for example...if an
ST is on an ethernet network in a buissness that gives out pop-mail
accounts for each employee, or if you use a university TS1 to get
online...but don't have a full access account).

I've not tried IRC...and most likely wont.

I've tried FTP versions 1.1 - 1.3...
None of these will work under Geneva...even in single tasking mode...
The first two versions hog the mouse cursor at "connecting" and never
give control back to either FTP or Geneva. The only way to get the
mouse back (unbusy) is to either click off the modem, or reboot the
machine. Version 1.3, under Geneva, can't find its RSC file.
all of the FTP versions seem to work well under regular GEM...
but that's the big advantage of STik over NOS or ICE...the fact
one can load all the goodies up and use them in an intergrated fashion
under a multi-tasking AES.

Basicly...I'm very impressed at the development of STik, CAB, and
AntMail. These three utilities are coming along very quickly, and nicely.

FTP and Telnet...which are basicly the two most fundamental internet tools
don't seem to be making any progress (forgive me if I'm looking in the

wrong places <toad.net umich.edu>). I'd be happy to contribute share ware bucks for good FTP/Telnet tools...but at the moment...I can't make any use of them...are there better (pay for use) versions out there somewhere?

Thanks for all the hard work on the WWW package...
STik, CAB, and Antmail really are excellent products...
Major accomplishments in very little time.

Telnet and FTP need major work...

Also...I'd like to see someone set up a place here in the states that could become the "Official" US home for the whole WWW package. This way it could accept "donations" for the cause, and handle currency swap nightmares for those over seas working on the project.

One example of a shareware program I almost bought is ConNect...
By the time I could have exchanged US to German, and waited for several weeks to get the key...I paid half the price for STalker AND Flash combined and had them installed and running. I could be missing out on some great share-ware house here in the States that does all this... if not...I wish one existed.

5338. Easiest way into MiNT??

Newsgroup: comp.sys.atari.st
Date: 1996-06-28 00:00:00 UTC
From: jat5@york.ac.uk
Message-ID: <4r06io$3j1@netty.york.ac.uk>
Source record: 142673

What's my best bet if I want to have a look at MiNT? I've seen
the `distribution kit' but the version of MiNT there seems old
(v0.95?), and there are more recent versions of MiNT available.

Is it easy to get the D.Kit, and then upgrade MiNT? Or is it
best just to install v1.xxx straight away?

cheers,

john..

The ANSI standard does define some .h files. POSIX defines a whole bunch
more. Most decent compilers stick to these standards. Each compiler and
OS typically provides a whole load more header files (often for system
specific programs as part of the OS), but if you want portable programs
then you simply shouldn't use them. I'd say that kermit is poorly
written if it has this many problems.

>: I tried Sozobon 2, and SozobonX,

GNU make can be found for most systems. It's such a useful tool that we
often even use it instead of the system provided make.

>I can do that because cpp fortunately is an independend program and hasn't

Subject: IBM Keyboard??!!!!!
Newsgroups: comp.sys.atari.st

c > I'm sticking my STE into a full tower case, and therefore
c > would like to have an IBM keyboard to use with the Atari as
c > opposed to the sh*tty one that Atari provides with it....
c > (soft touch doesn't type fast enough for me)..... I heard that
c > there was a hardware thingie to plug on the mother board, if
c > this is correct, where can I get one from. Or can I just do a
c > bit of soldering to put the new keyboard on.

A couple of solutions - the D.E.K.A. II from Wizztronics, and
the Keyboard Gizmo from chro_Magic. CURRENT NOTES recently did
extensive testing of the Gizmo and found it to be excellent,
especially in a tower case configuration.

TOAD carries the D.E.K.A. - you can get the Gizmo direct from
chro_Magic, their phone number is 1-417-623-7393 (US).

Dan Dreibelbis, news/alt.info.everything/occasional reviewer,

So what? Include files are operating system specific, aside from a
small collection that ANSI C mandates. I suspect that

#include <sys/elf_SPARC.h>

wouldn't get very far on a VMS box. Quite what this has to do with the
language is a mystery to me.

> and they didn't understand the Makefile. So it seems that the Atari version

So what? Make is nothing to do with the compiler or the language.

Indeed.

```
#define display(X) printf ("X = %d\n", X)
```

being a case in point. The Reiser pre-processor somewhat violates the
principle of least surprise there...

And, of course, there's that old favourite

```
#define foo(X) bar_/**/X
```

but the less said about that the better.

Help me find a new home for this 1040ST. Best offer will get it since I
don't know how much the current street price. It includes the following:

- 1040ST (1MB, internal floppy) and a mouse
- second floppy drive
- SC1224 color monitor
- Star NX1000 printer
- Spectre GCR emulator card
- IMG scanner attachment
- all my software (tons of games, fonts, etc)
- MIDI keyboard (Yamaha PSS680)

E-mail to me at KingKlutz2@aol.com

Regards,
K.K.

Leen - How old is the magazine? Do they still publish? If the answer to that is "no," there's no real need to worry about the copyright, but
if it is "yes," you should ask the publisher for permission. Either way, tell us where you found the article!

I think look'n'see can be found at HENSA, but at this time of day I'm
unable to verify. Here's the data dor Gemview:

Host: wuarchive.wustl.edu
Path: /systems/atari/umich.edu/Graphics/Gemview
Files:

gvw_315.lzh 506 GemView v3.15 (requires gvw_inst.app)
gvw_inst.app 48 The install program. Must have .pax files in directory.
gvw_lies.txt 22 German readme
gvw_read.txt 19 English readme
gvw_v306.pax 443 GemView v3.06 (requires gvw_inst.app)
gvw_doc3.pax 141 Documentation
gvw_tol2.pax 180 Tools
gvw_mdl2.pax 46 Modules
new_gemv.zip 67 GemView suport files for STraight Fax & CyberCube

I may be able to post info on look'n'see later.

Gustavo

5358. Speed of NOS & 28.8k Modems

Newsgroup: comp.sys.atari.st
Date: 1996-06-28 00:00:00 UTC
From: awood@f030.demon.co.uk
Message-ID: <835982132snz@f030.demon.co.uk>
Source record: 142693

Having tried using three types of 28.8k modems - SupraFAX, Motorola 3400 and Courier Sportster Vi - I've been somewhat disappointed by the little difference they've show from the SupraFAX 14.4k modem I've been using before.

I have taken my own advice and read Demon's Tuning.faq and Modem.txt to alter the settings in NOS and on the modem, but I'm still getting less than 3000cps for plain text with slightly higher figures for binaries (which I was surprised about). Whereas with the 14.4k modem I was getting 1700-1900cps binaries with 1900-2300cps for text and news.)

If anyone has any suggestions or comments that can help me, I would be most grateful.

My set-up: Falcon030 4/65+85, TOS 4.04, fpatch2.prg, HSModem6 (drvin & scc set to AtariWorld October 1995), CPX and NOS set to 134 baud (150 seems to be roughly the same) and mru/mss set to 1500/1460 (again, I've tried 576/536 - and it's about the same). The modem responds with 28800 connect rate, 57600 computer rate with L-APM protocol and v42bis compression)

Regards,
Andrew

: Is it easy to get the D.Kit, and then upgrade MiNT? Or is it
: best just to install v1.xxx straight away?

It really depends what you mean when you say "MiNT", and how high your level of expertise (or patience) in matters UNIX-ish is. You can very easily install a basic system that will run multiple TOS programs under GEM, and keep adding to it, also fairly easily. If you want everything at once, and don't feel like going out and finding all the latest versions of everything yourself, one of the distributions kits if probably your best bet. The TAF distribution and the KGMD are supposed to be quite good; the TAF distribution installs everything up to an including X-Window. The KGMD is, I believe, broken up into several subsets, so if, for example, you don't want to install GCC, you don't have to. Both are available on ftp.fu-berlin.de, as are several other distribution kits. Note that I haven't used either, having chosen to go the incremental-install route, so your mileage with my remarks me vary :)

Do you get the same symptom that I do, no data appears to come in
after the connecting, but the send light on the modem appears to be
sending some small bits of data very fast, the light is constantly
flickering.

5364. OASIS2/ICE - Comment List # 39

Newsgroup: comp.sys.atari.st
Date: 1996-06-28 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <93166857_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 142699

Oasis Report - D.M.Brewood - Updated: 28/06/96 # 039 (posted to
== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Rod Keen (beta@gaiasys.demon.co.uk)
Neil Martin (Neil@yr-ynys.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (Dave@levihome.demon.co.uk)
Phil Yeadon (Phil@yeadontt.demon.co.uk)
Boris D. Cahan (bdc2@po.cwru.edu)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1024 x
768 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE
message echo on a weekly basis.

This data is based on the beta version(s) provided on:

ICE = 09 June. 1.03
OASIS2 = 25 June. 2.06 (same issue as the package).
ICE_NET = 25 June. 1.21

Package 2.01 was the first stable release version.

Package 2.05 released 03/06/96.

Package 2.06 is under beta test by myself now.

Latest News and Gossip:
=======================

Well, it seems like virtually everyone approved of the idea behind
this little gossip area, not quite sure how it will develop yet,
but I'm sure it will be interesting.

No real new news yet, excepting I can verify that I managed to
bring in some 10.04mb of binary files via Demon using SLIP, and
not one single error, or failed file. Well done to Dave.

The frond support has been added into ICE_NET and OASIS2 by Phil
as well, and Dave now has the FROST source code to work on so I
think we can safely say our first frond is now due out shortly.

My thanks to Neil M as well in this issue for supplying me with
the new TT keyboard, which has now replaced the keyboard in my
Falcon and also getting my typing speed back up again.

Ref everyone wanting a copy of my OASIS2 folder Icon, well it
seems the guys have aleady done one in a similar vein, so I'll
leave off issuing mine as the folder icon will be present in
the next beta release.

As some of you know Phil and Dave attended the NeST AGM, and a
good discussion took place concerning development of the system
and I think the guys now have a better knowledge of what sysops
want the package to be able to do from their end of things. I
again think FROST has been given new impetus by the discussion.

New in ICE since the first official OASIS2 release:
==

1.01

- More TCP routines in machine code.
- Ftp bug fixed.
- Socket and Directory windows seperated.
- Debug q removed.
- ICE speed increased.
- News can now be sent without downloading news.

1.02

- IGNORE allowed in logon script to allow sending of multiple lines.
- /n now supported (sends back a CR).
- ICE online clock disabled it the user runs on an (M)STe/ST-Book.
- Delay system implemented.
- Documentation updated.
- TCP checksum error fixed 99% of the time.

1.03

- TCP checksum error problems fixed 100%.
- News History file update for numerical format.
- All IP routines now in machine code.
- FTP now supports use of anon as well as ftp as a username.
- When an 'IP: Bad checksum' error message is displayed the ERROR_PING
flag is not picked up and no ping is generated - fixed.

New in OASIS2 since the first official OASIS2 release:
===

2.00

- Window re-draw routines completely recoded.

2.01

- More Redraw code modifications.
- Fix of Local Post bug.

- Documentation corrected.

2.05

- Problem with unregistered article headers fixed.
- Edit SIG problem fixed.
- When examining articles ready to post in the Internet window, after the article is exited (using ESC) the initial window's contents are not redrawn - fixed.
- When logging onto Demon with an existant HEAD.OUT file you no longer get an error, the program now appends the data.
- Local Post bug with exit back to desktop may have been cured.
- GEMDOS seek error trapping added when posting a mail mime document in the external editor.
- Inmail/Outmail flagging bug fixed.
- In the Outbound window the IP name is now shown in the same case as it appears in the ICE.NET file.
- Redraw recoding completed.
- Postbox only saves when read state of an item changed.
- Table added into the OA_CODER.
- Documentation updated.
- New outgoing mail/news no longer overwrites existant mail/news items.
- More updates to the redraw code.
- Auto-add of user name to yellow page routines recoded.
- Yellow pages problems cured.
- Scrolling selection of user name bugs fixed.
- Errors in detection of 'from name' whilst processing email fixed.
- When replying to a MIME message, and using ALT S to send the message, quoted text is now included within the external editor.
- The 'local post' exception 68000 error under MagiC has been cured again.
- Added support of MIME partial items for email.
- Base 64 bugs in news fixed.
- Support for 'pre' and 'after' fronds added.

2.06

- Font size controls added to Oasis.
- Complete MIME send routines (Partials created Automatically) with iconic control panel. [Email to be completed].
- GMT offset system recoded - now does not reset system clock.
- Send MIME bugs fixed when using external editor.
- Not enough disk space when unbatching news no longer results in the incoming mail being deleted.
- MIME partial size selectable.
- 'Mail To:' support added for MIME. **
- OutMail now shows outgoing MIME files correctly. Will be added to the Internet Window. **
- In the Outbound window - Window header should changed to show 'outbound'.
- Time / Datestamping of files.
-

New in ICE_NET since the first official OASIS2 release:
==========

2.01

- Changes made to HELP dialogues.

2.05

- Support for additional flags added.

2.06

- Mydials removed and in house code generated.
- Windows style pop-up's added.
- Frond Support added.
- Font size controls added to Oasis.

New in Spider since the first official OASIS2 release:
==========

- Basic code evolving.
- Code written to display raw text without HTML tags.

List of possible bugs discovered in ICE so far:
==========

- Fix PPP packet bug where carrier drops.
- News just stops for no apparant reason, or due to IP bad checksum error.
- On his TT Neil suffers from:
- Incoming pop3 mail (cixip) is corrupt - repeated or missed packets.
- Incoming news keeps stalling with bad packet (IP) errors.
- Always IP checksum error on 'loging' (note: SB 'logging) in.
- Several times had error 65 when exiting ICE to Oasis, then crash!

List of possible bugs discovered in OASIS2:
==========

- The 'Local Post' bug is back under MagiC 4 whereby Oasis crashes out
when posting the message locally.
- Oasis2.prg doesn't work properly with Outside on some Falcons. It
seems to allocate all virtual memory with loads of disk thrashing and
does run but takes several minutes to load. ICE.PRG works fine.
- Daily Net window does not resize of newsgroup names.

F.R.O.ST Development:
==========

Done:

- Coded front end so it is MagiC / Falcon compatible.
- Added GEM window code.
- Added ICE interfaxce code.
- Recoded the email processing code.
- New database format eveolved and working.
- NeST address's now have the format of Daron.Brewood@nest.demon.co.uk

- NeST email will now export to the internet.
- MAIL.IN file scanned to locate mail from the internet for NeST users.

To-Do:

- Import mail from the internet into NeST.
- Add 'FROST' user system into OASIS.
- Export NeST echo's to the internet.
- Import internet newsgroups in to NeST echo's.
- Add support for sending archived NeST mail packets out to an internet address in UUE / Base 64 format.
- Add support for receiving a tagged internet UUE email and processing it out into an archived mail packet for NeST to process.

To-Do and Suggestion List:
==========

- Implement thread map for emails. [Will be implemented but after initial release]. [Phil]

For ICE:

- F.R.O.ST = Fidonet Reworked Operations ST. [Daron, Phil, & Dave]
- S.N.O.W = Serial Negotiation - Outside World. (Serial port control & configuration). *

For OASIS2:

- N.O.M.A.D = News Operation Moderation And Delivery (Moderation of newsgroups).
- P.A.L.M = Please Add Listed Mailshot (Mailing lists).
- C.A.M.E.L = Count And Manage Electoral Lists (Voting systems).
- ????????? = (Autopost text file on a certain day each month).
- ANSWER = Respond to emails automatically with a specified text file (one per account). *

* = Will be completed before 2.06 release.

- When using the auto-locator when sending email messages it would be useful if a dialogue came up confirming the users name, and if more than one user shares that data (I have 4 Dave's in my yellow pages) then a selection dialogue should appear allowing you which user to select. This should just show the names available, not the full YPG's. [Phil]

- Wanted: C include files for use with GFA MyDials dated 10/11/92; export.h & import.h [For Phil - obtained by Daron, awaiting feedback]

- Add in function key selection of the user. [Phil]

- Add flag next to username selection to show if unread mail.

- Implement use of SHIFT HOME to move cursor to the bottom of the mail and news windows. [Phil]

- Implement colour coding within the groups window so you can see if a group is suspended, inactive.

- Add PrivateMailbox support for news.

- Outbound window - rework to correct outmail format and make user specific.

- Add vax compatible ftp code into ICE.

- Find article by search routines (not by thread title).

- Include sets of working log on examples for different providers in the package.

- Specifiy more than one pop number so if one pop is busy the next one on the list is used.

- Cursor selection of MIME items.

- Show newsgroup file size in the Groups window (Kbytes).

- Support provider specific mail sending for those users with more than one IP account.

- User defined 'quotes' header for news/mail.

- Answering Machine to support multi-mailboxes.

- Fix TT Ram operational bugs.

Qasis / Ice FAQ's
==========

- Q: Can icons be added to those already used (as seen within the toolbox)?
A: Yes - the TOOLS_LO.RSC and TOOLS_HI.RSC files may be edited to add additional icons.

- Q: Can the subject be changed when replying to messages?
A: No, this is not allowed according to the RFC's.

- Q: What causes error OASIS FILE ERROR I:\OASIS2\NEWS\ARTICLES, and how can it be corrected?
A: Try re-indexing the news group, sometimes the index gets corrupted by drive fragmentation from a lot of unbatching and expiring. If this fails, Wipe the group.

- Q: What do OASIS and ICE stand for?
A: OASIS = One Atari System Internet Software.
ICE = Internet Connection Extension.

- Q: How much is the registration fee for Oasis2 and ICE?
A: The registration fee is £30 pounds and gives a lifetimes registration for OASISx, ICE, ICE_NET, and SPIDER.

- Q: If the email files get corrupted, how can this be fixed?
A: Delete the relevant .MIX file from the mail directory and when post is selected the email will be reindexed.

- Q: I know that 'X-' reference lines may be added to the top of a message manually to access things like Anon servers, but how can these be added if for multi-part binary file transfers? Is it possible?
A:

- Q: Why does my USR Sporster Vi not respond to the dialer?
A: For some reason the Sportster switches to numeric result codes when accessed by ICE. Use ATZATV1 as your init string and it will solve the problem.

- Q: Can dialogs be added in to OASIS2/ICE to support setting of the following to allow fine tuning? [Dave]

attach asy AUX: 0 ppp sl0 32767 1500 110
ip ttl 64
tcp mss 1460
tcp window 11680
tcp irtt 3000
tcp syndata on
ppp sl0 lcp local mru 1500
ppp sl0 lcp remote mru 1500
ppp sl0 lcp local accm 0x000a0000

- A: PPP is an unusual system in that during configuration you define to the remote site how you want the packets to be sent. Whilst this negotiation is being carried out there is a simultaneous negotiation of what form & size the packets required by the service provider are to be. This generates a protocol in which what one side can send it cannot decode.

attach asy AUX: 0 ppp sl0 32767 1500 110
This is an internal setting for NOS and is irrelevant to ICE.
ip ttl 64
Time to live is suppoorted in internal & external packet life. The internal packet life is for packets which are sent to addresses which have the same two numbers at the start of the address as the user. External packet life is for all other packets. The values for these are settable inside ICE-NET.

tcp mss 1460
The maximum segment size is equivalent to the packet size set in ICE_NET. Any size between 512 and 1948 are supported by ICE. the default values in ICE-NET are for ease set to 512, 1024 & 1536.
tcp window 11680
ICE supports a window of unacknowledged packets of upto 4 times the packet size.
tcp irtt 3000

tcp syndata on
Currently ICE works to the RFC definition of TCP/IP these
values must be covered in ICE if necessary to a working
system. My understanding of the NOS configuration lines does
not cover these two.
ppp sl0 lcp local mru 1500
ICE defaults to a local MRU of 1524 bytes although the
incorporation of the PPP packets size in ICE-NET will be
complete prior to release of 1.03.
ppp sl0 lcp remote mru 1500
The remote MRU size is negotiated with the service provider
during configuration of PPP. ICE supports any value that the
provider requests. The size defaults to 1500 if not
negotiated.
ppp sl0 lcp local accm 0x000a0000
The ACCM is the list of escaped characters required by the
system below character 32. ICE does not require any character
to be escaped and therefore requires no ACCM. If the remote
site (Service provider) requires an ACCM this is supported
by ICE on request by the service provider during negotiation.
(Dave)

Phil Yeadon and Dave Levi have my full permission to use this listing as a
master listing, and to thereby generate history files for Oasis/Ice
release archives. This entire listing however as always remains the
property of myself.

Fair enough. :^) Mind you, I didn't mean 80 users running CAD; but at all
times, you are running emacs alongside cron, inetd, syslogd, nfsd, utmpd,
vold, fsflush, sendmail, etc. You are correct, normally these all just
provide low-level noise on the CPU meter, but cron in particular wakes up
every minute and causes a several-second-long spike on the CPU. Since UNIX
proper is not a realtime OS, you can't necessarily take wall-clock times
as reliable indicators.

The other post you refer to hasn't shown up here yet... I'm interested to
see the cause of the retraction. :^(

: > My Internet provider says I have "true" slip and not cslip.

: I've often heard of provider employees who didn't know the difference,
: and kept saying slip, slip, but really meant cslip :-(

Hi! Well, I have this EXACT same problem as this person does, and I
checked with my ISP, and they said that they do have SLIP, as well as
CSLIP and PPP, and that they know the difference. I have all the config
values set to exactly what my provider as well as the docs included with
the package said to set them to. Could it be that there are some systems
that CAB just can't communicate with?

: > I've copied CAB.OVL into the CAB folder...
: >
: > I increased the ALLOCMEM...
: >
: > CAB loads and displays the home page just fine...

: Which home page are you talking about ?? Is that a home page coming
: across the internet connection (In that case check the NAMESERVER entry
: in DEFAULT.CFG, it must be the four-number-address of a nameserver that
: is recommended by your provider) ? Or is it the example html file that
: comes with CAB ?

I'm sure he means the home page file that comes with the WWW131 package.
I have been trying since December to get this software to work with my
provider using every suggestion I've ever been told with no luck. It's
the only provider in my area that has a SLIP connection, so I can't try

others. I sure wish someone could figure this out soon because it is
extremely frustrating!!!

: Cheers Peter

>A couple of favourite non-games:
>Degas Elite was a nice art package, with better features than most,

Please excuse a short diatribe (grin):

Oh I don't know. I was always of the opinion that Degas Elite was rubbish compared to CrackArt. To this day I have never used an easier program for pixel-bashing than CrackArt. The modern "illustration" programs one finds on the Mac and PC never have the ease of use--especially with regard to the magnify tools--of CrackArt. In fact, it seems today that magnify tools are curiously unimportant and therefore almost neglected as a feature, often given a hopelessly inefficient interface.

I can still remember how easy it was to adjust pixels in CrackArt. It was like Degas Elite in that you tapped a function key of your choice to get a magnify window. But once you placed it down, you were in magnify bliss. Arrow keys to move, right button to pick up a color (eye dropper effect). Right button on the unmanified preview window to un-zoom.

Nowadays, you're fussing with control-n (or some other nonsense) to "engage magnify" which always gives you some generic magnification level. To scroll you have to slide your mouse over to some clutzy scrollbar, to reposition without the clutzy scrolling you have to unzoom (another unclever control key or pull-down menu) and rezoom. And you're constantly fussing with all sorts of floating dialog boxes like "Zoom factor" and such. Blech. In my opinion, conventional GUI interfaces (pull-down menus and scrollbars in particular) are ineffective for illustration programs.

Pixel-bashing just lost its favor at some point and has been neglected every since.

The FaST Club (PD library) in the UK sell GDOS fonts.

Email for the contact details if you want.

Regards, Derryck

One probem tho' Rich, the 24 pin fonts are 360*360 dpi, which means that they
will print out too large on the 300 dpi Deskjet.

I wonder whether the original poster qould be better advised to get hold of
one of the vektor font technology replacements, NVDI or Speedo might be
better choices?

Speak to 'ya later!

>somewhere?

Nope those are the latest you have.. and there aint any other
versions... FTP should hopefully be updated soon telnet I have no idea
of at the moment.

>Thanks for all the hard work on the WWW package...
>STik, CAB, and Antmail really are excellent products...
>Major accomplishments in very little time.
>
>Telnet and FTP need major work...

Telnet definately.. Ftp is already..

>Also...I'd like to see someone set up a place here in the states
>that could become the "Official" US home for the whole WWW package.
>This way it could accept "donations" for the cause, and handle currency
>swap nightmares for those over seas working on the project.

I may be able to arrange a few stik www page mirrors somewhere soon..
there are a few pages in the US which have all of the www package and
programs on as well though.
As for shareware registrations over there.. I dont know.. I would have
thought there would have been at least some person like Joe or Danny
over there..

Nick.

: attend.....

The closest Atari show, geogrpahically, is the one held every year in Sacramento (just up I80 from you). It is held every year about the third Saturday in April, so it'll be a little while before the next one. Talk to your local user groups (ABACUS, NCACE, etc...) and see what events they all have planned. I don't have their e-mail addresses to hand, but you can use the YAC e-mail finder at http://dcn.davis.ca.us/~dmlarson/yac/

Hi all,

I am wondering if anyone knows of a programme that will print address
labels on a canon bj200 printer.
I did have a HP Deskjet and there was a great programme for it that took
a text file and layed it out into mail labels, than printed it on the
sticky paper etc...

Can anyone help??

Thanks in advance

That's better than too small, when you have to use an Argon laser to get enough light to read comfortably. <G>

> I wonder whether the original poster qould be better advised to get hold of
> one of the vektor font technology replacements, NVDI or Speedo might be

Undoubtably, that would be "better" in terms of function - but the NVDI 2.x that I have now is paid for...

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st,rec.music.makers.synth,alt.music.makers.electronic,alt.music.midi

I'm trying to locate a number or address for Gadjits Software. The
reason being that I've been using their Roland MT-32 editor/librarian
program for my Atari St.
First the key disk went bad and I couldn't access it directly. No big
deal since I have the program on my HD. Up until the past few days the
disk worked well enough to be recognised when the program requested it to
be inserted for write protection purposes. Now, even this is becoming
sporadic.
Hopefully, it'll last long enough to xfer my customised banks to my sysex
program...:)
Anyone use this program and know how to get in touch with the probally
now defunct manufacturer? Or...does any one know if the data is standard
sysex format?
This is especially frustrating because I'm upgrading to a PC next week
and I'd hate to lose all this data before I can xfer it to the new machine!
The God of the Atari must be punishing me for my platform infidelities :)

b> 1.0/1.2).

According to John Townsend's text file of TOS bugs and patches, you'll need
CACHEnnn, FOLDERxxx (unless they're sorted by your hard disk driver) and
STE_FIX (for medium res desktop.inf's) and POOLFIX3 (updated to v4 and then
POOLFX92). The latter two are fixed in TOS 1.62

Not mentioned above is SCROLFIX (the update to BUTTNFIX) and HSModem as usual.

5397. C-lab Combiner Help

Newsgroup: comp.sys.atari.st
Date: 1996-06-29 00:00:00 UTC
From: jklimch@larry.cc.emory.edu
Message-ID: <4r2dcp$2bq@larry.cc.emory.edu>
Source record: 142728

I've bought an old dongle expander from C-lab called a combiner at a yard sale. I'm hoping to use it with the dongles for Cubase Audio & Zero-X for Falcon audio work. The combiner came with no software. It seems to work for the dongle selected in Slot #2 but I have no way to tell the unit to switch to another dongle using the #3 & 4 slots.(slot #1 doesn't fit any of the other dongles so I assume it's for Logic). Does anybody know how to do this switching? I know that Cubase is supplied with an ACC called keyslot for changing dongles slots in their MidEx expander but it doesn't work with combiner. Is there a similar piece of software from C-lab?

5398. FS: Various old and new Atari hardware for sale

Newsgroup: comp.sys.atari.st
Date: 1996-06-29 00:00:00 UTC
From: <>
Message-ID: <4r2fu0$jnr@hume.nmia.com>
Source record: 142729
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

Hello all,

Well, it's time to get rid of all the things from the closet. Here are the
things that I found:

Atari 800 -
48K RAM
Atari 800/400 Carts -
Miner 2049er
Assembler Editor
Basic (2 of, why I don't know)
Pacman (just the board out of the case, not sure if it works)
Atari 410 Tape drive
Various manuals
Various 5 1/4" floppies (I doubt anything is remaining on them and no
longer have the disk drive)

Atari 520ST -
Upgraded to 1 meg RAM
Case is in bad shape, but it works.
TOS V1.02 (I think this is right, it was one of the originals)
Atari DS 3 1/2" floppy drive
2 Atari SS 3 1/2" floppy drives
Monochrome monitor
Color monitor
Various 3 1/2" floppies (again who knows)

Atari Falcon -
Small problem with the keyboard. Part of the circuit is
broken on the motherboard. I fixed it by re wiring
the circuit. It works fine now.
85 MB internal hard drive
16 MB RAM upgrade (I might want to keep these SIMMS)
Original 4 MB RAM board
Original manuals and S/W floppies
ICD Pro SCSI software

I even have original packing for a lot of it (talking about a pack rat).

If you want anything above just send me mail and whatever you would like to
pay for it. I'll even consider that you just pay shipping charges. I'll
check to make sure the things work before sending. Everything above was
working the last time I tried. Just name your terms...

More information on anything by request.

Take care,

George

The 7th annual Houston Atari Safari will be held on February 22nd, 1997 at the Four Points hotel, 7611 Katy Freeway, Houston Texas. Safari '97 is primarily a vendor show, so naturally we're looking for vendors. Contact the Houston Atari Computer Enthusiasts, PO Box 820335, Houston TX 77282-0335 for more information.

Are you going to be able to make the show Rich?

George Iken
Houston Atari Computer Enthusiasts

:
: What are you waiting for? PPP is already available for CAB, just install
: MiNTnet.

Quite frankly, I'm waiting for it to be an easier install. MiNT was
easy. But everything MiNT related beyond that is tar.gz and I have never
been able to successfully un-tar.gz anything. I wish someone would
upload all the MiNT stuff somewhere simply zipped or lzh'ed. I know I
need to use GnuZip to un gz the file, and then use tar to untar them
(although newer gnu-zip's have this built in). I've followed the
instructions carefully for setting the flags. But always it either
doesn't do anything, or produces an unusable file.

I do not have a Minix partition, I do not use anything but 8.3 filenames,
why do I need tar and gnuzip? They just frustrate me.

Sorry to whine. It has been very frustrating. As frustrating as STiK
was, I _did_ finally get it to work. I gave up on MintNet, etc.

d> sending some small bits of data very fast, the light is constantly
d> flickering.

If the light is flickering, you're actually connected and STiK is
communicating; those are the "keep-alive" packets. It would appear that the
problem is either a bad DNS configuration or an incompatible data format
(usually CSLIP, but there are several "off-brand" versions of SLIP floating
around, including one used by pipeline.com in the USA called "pinkSLIP"). In
a few cases, a proxy server may be required.

Source record: 142735

Hi Thomas, on 27 Jun 96 you wrote:

TB> Organization: Technische Hochschule Darmstadt
TB>
TB> hsideras@mettav.demon.co.uk (Harry Sideras) writes:
|>> Will you be trying to get all the Magic specific features of Magxdesk
|>> into it?
TB> No, there will neither be a special MagiC-version of Thing, nor a
TB> special one for MiNT (at least none which support special features).
TB> Just think how difficult this would be to handle.

I have no idea.

TB> But anyway, I guess we should continue with private EMail, OK?

The reason I brought the subject up was to ask the questions in public, so that feedback could be received to make the product reflect what users wanted as well as what you feel it needs.

Andreas Kromke highlighted some features of MagxDesk that weren't available in alternative desktops, but Magxdesk itself lacks many features that have come to be expected by Thing/Gemini/Ease/Neodsk users. If the purpose of the desktop is to make features of the operating system easier to access by the user, and there is a very widespread usage of Magic as a replacement operating system, then there's a very good case to say that Thing should attempt to support it wherever possible.

I know Thing takes up a lot of RAM already (certainly compared to MagxDesk), but fuller operating system support would be a more obvious priority than extra bells and whistles, wouldn't it?

Regards, Harry Sideras - UK Association of Atari User Groups

Even if its Canadian money - that price is way too steep. Used computers depreciate almost 50% of their value from the time they are first turned on. The Falcon is a solid machine but way outdated. I sold a more advanced specimen (had a bigger hard drive, extra cables, some original software, and a new RGB display) for about $850 US. This was almost 2 years ago!

You should be paying around $350 for the F030 and perhaps another $100-$150 for the RGB display.

Ari

Thorsten, there are a WHOLE bunch of us folx who can't get MiNT to run, much less MiNTnet. I'm trying, really I am, but so far, no success. I can get it to start - but as soon as I try to run a replacement AES, or practically anything else, I get errors (something about memory not allocated, although I'm running MINTNP.PRG) and the system crashes.

That sounds like a real good argument against using Flash II, Cliff. I don't know what anyone else does, but my system runs the BBS and Internet gateway most of the time - I'd be real upset if I had to reboot just to use a terminal.

After a long waiting time , finally I download OASIS 2.0 . Finally also an Atari user (mega STe) like me can use e-mail , newsgroup etc. also with ppp connection . But after some tries I'm less happy then before .
My problem (maeby stupid problem) is :
I start Oasis , then select internet logon . At this point ICE takes control and make connection with my provider . Until this point everythings works fine , but now ? I cannot understand how can I return to Oasis and start with e-mail section or newsgroup .
Can someone help me ?

Thank a lot

Ciao

Paolo

I can't tell you exactly where to find them but I recommend the following: For a shareware program track down a copy of Gemview. It loads and converts many Atari, PC and Mac formats. A more limited program but freeware is Imcon. The best commercial package is Imagecopy 4CD. I know Imcon and Imagecopy support GIF and I just checked, Gemview does also. If you can't find either of the first two, give me your email address and I can mail you a copy of either.

Date: 1996-06-29 00:00:00 UTC
From: SSweet@mettav.demon.co.uk
Message-ID: <15428_SSweet@mettav.demon.co.uk>
Source record: 142754

FROM: SSweet@mettav.demon.co.uk
SUBJ: Monitor -> TV socket conversion/confusion

a> thirdly: will UK channel 5 bugger-up any attempts to add a modulator??
a> thanks,

No, you'l not get any prob's there. Channel five will be almost universaly broadcast on CH 37, and possibly CH 35 in some areas. Since you will have your ST conected directly to the TV and not via an aerial distribution system you'l get no problems.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

5425. Atari ST FTP site list

Newsgroup: comp.sys.atari.st
Date: 1996-06-30 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <31d657d4ada0141@sn.no>
Source record: 142561

It's that time again... here's this month's FTP site list. No changes
to last month's list though. So the only change to this month's list is the
date :-)
As usual I'm relying on _you_ to help me keep the list up to date, so keep
those mails coming in.
Enjoy, and have a nice summer!

Hallvard

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

Mirrors to 'atari.archive.umich.edu'

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site

ftp-mailer@ftp.informatik.tu-muenchen.de ftp.informatik.tu-muenchen.de
archive-server@micros.hensa.ac.uk micros.hensa.ac.uk
mailserver@leo.org ftp.leo.org

___

What to type What it does
---
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
---
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
---

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
---
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
---

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
---
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

_____

[2] Preparing for file downloads
==========

cd /directory/ (i.e: cd/pub/atari/) [MOVE TO DESIRED DIRECTORY]
bin [SET TRANSFER MODE TO BINARY]
ls -l (or: dir) [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]

** Some FTP sites don't accept 'ls -l' for some reason. In those rare cases
use 'ls' instead (or use 'dir').

Example:

```
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh
-rw-rw-r-- 1 hesche atarimod 105936 Jul 24 1995 525_v211.lzh
-rw-rw-r-- 1 ftpadm atarimod 168363 Mar 10 1993 accomp25.lzh
---------------------------------------

* If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

\_\_\_
```

Example:

```
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
####################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##########################################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
########################################
226 Transfer complete.
ftp>
```
---

* you can also use a 'wildcard' to get hold of single files or a specified selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this file or not, you can use the command 'prompt'. FTP will then proceed to get all the files that match your wildcard without asking if you want them.

Example:

```
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
```

_____

[4] Ending your FTP session

```
close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
```

Example:

```
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
```
---

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
```
--------------------------------------
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
--------------------------------------
```

* When doing a 'close' and re-entering a new FTP site you won't have to set up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==========
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
==========
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file

```
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
```

```
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

From: uci@infobahnos.com
Message-ID: <4r6g4d$1a6@news.total.net>
Source record: 142567

have a color monitor (Atari SC1224) with cable, there's something wrong with the circuit connection, but it probably could be fixed. someone can have it for almost nothing if they pick it up, or for near the cost of shipping anywhere is the U.S. or Canada (still have the original box and packing material). LMK.

>What has 2.06 got that 2.05 doesn't?

You'll need a serial patch program for TOS 2.05 to use a 14400 baud modem.
TOS 2.06 doesn't need the patch. I also noticed that TOS 2.06 seems to
keep better time than 2.05 did.

5436. Link96 ??

Newsgroup: comp.sys.atari.st
Date: 1996-06-30 00:00:00 UTC
From: smokin@libertel.montreal.qc.ca
Message-ID: <4r6ob6$coo@cumin.telecom.uqam.ca>
Source record: 142572

I am wondering if anyone out there has heard anything relating to the new Link96? I got some mail just saying that it is 100% SCSI 2 compatible, and it comes with CD tools, or HD Driver, or something else.

Could someone give me a little more info on this product?

Thanks

joseph

>anything else, I get errors (something about memory not allocated, although
>I'm running MINTNP.PRG) and the system crashes.

Keep trying. It's really worth to go through all the pain.
I finally managed to get Mint/Mintnet working. My setup is a ragbag of
pieces from the TAF package and N.AES. The installation of the TAF
package is a piece of cake. If one read the manuals with great
attention everyone should be able to do that. After succesfully
installation just uncomment the X11 lines and add "exec
\usr\etc\syslogd" in the MINT.CNF file. After rebooting you can open
now the Minix partition via the normal desktop. (I recommend to use
Thing). That way it's very easy to edit the files in the Minix
partition with a texteditor like Tempus or Everest. This offers a much
easier way to edit the files than with vi.
To dial I've changed tcsh (\usr\bin\) into tcsh.ttp and placed that on
the desktop. Also on the desktop I've put ppp144 (\usr\ucb\). By
dragging the ppp144 onto tcsh.ttp I make a connection with my service
provider. The only thing I don't know (yet) is how I can make a
disconnection. For the moment I use STiK for that. N.AES isn't
necessary but it's a great help. With N.AES I have a very good and
fast multitasking system.

Unfortunately I can't help you with your problem. Concerning
MinT/Mintnet I'm a real dummy.
On thought though: Have you tried MINT.PRG instead of MINTNP.PRG. I
believe that NP stands for No Protection (memory). Just deleting
the NP part is enough.

CU

I dont recall any such notoriety , are you sure you dont mean 'busy' ? having
60k+ hungry mailbox's to feed you can imagine that to be the case . However
for real 'busy' try mcimail.com for example (e.g try that as a smart host for
a couple of mails ... now try tell me demon is slow <G>)

> - Several times had error 65 when exiting ICE to Oasis, then crash!

Once again I see the bugs I reported to Dave (nearly three weeks ago) are
missing from the list, so here they are, in descending order of seriousness:

If an outgoing mail message has a line containing only a dot, every
subsequent line will be lost.

If an outgoing mail message has a line beginning with a dot, the dot will
vanish in transit.

If an incoming mail message has a line beginning with a dot, an extra dot
will appear (I assume).

When you ping 127.0.0.1, you get a response from the gateway you are
connected to.

>Qasis / Ice FAQ's
>=================
>- Q: Can the subject be changed when replying to messages?
> A: No, this is not allowed according to the RFC's.

I assume this rule only applies to news articles? In any case, it would
still be possible to stay within the guidelines by ditching the References:
line if the user changed the subject. I'm surprised they chose to implement
this widely-ignored rule - how many times have you seen articles reposted
with subjects like "This is my post of the week" or "Look what I found in
another group"? (Answer: lots.)
